Rule 8. Fire Pump. An automatic electric fire pump as an automatic source of water supply is one approved for such use and controlled by an approved automatic controlling device, which shall be adjusted to maintain not less than 15 pounds water pressure at the highest sprinkler below main roof and in pent houses over 2,500 sq. ft., as provided in Rule 5. And shall receive water supply only from a direct connection to the city water main.

As auxiliary sources of water supply steam or electric standard fire pumps shall receive water supply from a suction tank, a direct connection to the city water main or other approved sources capable of supplying the pump at its rated capacity for sixty (60) minutes. The rated capacity of the pump shall be not less than five hundred (500) gallons per minute, and shall be sufficient to supply twenty-five per cent (25%) of the number of sprinklers in the average protected fire area.

The pump shall be located in a room of fireproof construction, properly ventilated, lighted and drained, enclosed in eight (8) inch brick or concrete walls with approved fire doors at openings and with fireproof floor and ceiling construction. If located in the lowest story of the building, the pump shall be placed on a foundation not less than one (1) foot in height. The pump room shall be readily accessible with safe egress for the attendant.

A reliable source of energy for driving the pump shall be provided. For steam pumps, provision shall be made for sufficient steam power to operate the pumps at full rated capacity, and a steam pressure of not less than fifty (50) pounds shall be maintained at the pump at all times. Where there is more than one boiler, the pipes and valves shall be so arranged to permit the cutting out of any one boiler without interrupting the steam supply to the pump from the other boilers. The boiler room shall be cut off from the remainder of the building by fireproof floor and wall construction with approved fire doors at all openings.

Electrical energy from a public service plant shall be acceptable as a source of energy for driving electric fire pumps. When local power plants supply the energy for operating electric pumps, two motor generator units shall be provided, or one generator unit supplemented by a public service break-down switch. Local electric power plants shall be located in rooms of fireproof construction with approved fire doors at openings.

Rule 9. Sprinkler Discharge. For the purpose of computing the capacity of water supplies, standard one-half (½) inch sprinkler heads shall be assumed to have an average discharge of twenty (20) gallons per minute, and the discharge of larger heads shall be computed proportionately in the ratio of the areas of their respective orifices.

Rule 10. Fire Area. A fire area is any floor space enclosed on all sides by exterior walls or fire walls or a combination of both. The number of sprinklers in the average protected fire area shall be determined by the number of sprinklered stories in such section. In

PUBLIC HEARING

determining the required capacity of water supplies, the number of sprinklers in the average protected fire area need not include those located in low positions, such as under benches, low shelves, closets and platforms and between cars in car barns.

Rule 11. Fire Department Connection. All automatic sprinkler systems shall be provided with at least one two-way Siamese connection on each street front of the building for connection to the fire department hose. Buildings fronting on only one street shall be provided with at least two Siamese connections when the street frontage of building exceeds [one hundred and fifty (150)] two hundred (200) feet [in width].

Where buildings have frontages on more than one street there shall be a fire department connection on each street front where frontage is not continuous but in all cases where more than one fire department connection is required they shall be located as the Fire Commissioner may direct and shall not be grouped.

All Siamese hose connections hereafter installed, except those on piers or warehouses intended for fire boat use, shall be three (3) inches in size. Fire boat connections shall be three and one-half (3½) inches in size. All hose connections shall be female, with standard fire department threads.

The inlets shall be placed at least eighteen (18) inches and not more than two (2) feet above the sidewalk, in a horizontal position accessible to the fire department, and shall be provided with a four (4) inch discharge connecting with a four (4) inch pipe to the sprinkler system for three (3) inch fire department connection and with a six (6) inch discharge outlet and six (6) inch pipe for three and one-half (3½) inch fire boat connection. Each inlet shall be provided with a clapper valve machined to a true face.

Each Siamese connection shall be designated by raised letters at least one (1) inch in size, cast in the fitting in a clear and prominent manner and reading for the service designated, viz.: "Base. Spkr.," etc., as the case may be. If the entire building is sprinklered, the fitting shall be marked "Auto. Spkr."

Siamese hose connections may project through a street wall not more than twelve (12) inches beyond the building line except that where there is an angle formed by the street wall and a check piece or the base of a column, pilaster or ornamental projection, they may be so located that no part extends more than fifteen (15) inches from either side of such angle in accordance with the provisions of the Building Code.

In each fire department connection there shall be an approved straightway check valve installed in a horizontal position, unless suitably designed for vertical position, and the piping shall be arranged to drain between the check valve and the outside siamese coupling by either a ball drip having a one-half (½) inch pipe connection and one-half (½) inch orifice and a bronze ball of proper size, or by a three-quarter (¾) inch drip connection, with plugged valve attached, and when necessary arranged to drain to a sewer. A drain connection may be tapped into the body of check valve only when located in a horizontal position.

Rule 12. Automatic Sprinkler Systems. Automatic sprinkler systems shall be classified as:

(a) One Source Systems, supplied with water from any one of the automatic sources; and

(b) Two Source Systems, supplied with water from a combination of any two of the automatic sources; two pressure tanks with a total water capacity twice that required for a one source supply; direct connection to the city water supply on two different streets, so located that the closing of the controlling valve on one main will not eliminate the main on the other street; or a direct connection to the city water supply and one of the auxiliary sources provided the water supply main is at least six (6) inches in size, the main is fed both

ways and a two (2) inch test pipe at the top of the sprinkler riser shows a flowing pressure of fifteen (15) pounds per square inch between the hours of six a. m. to six p. m.

A gravity tank and pressure tank, or a gravity tank and pressure tank and one of the automatic sources or two pressure tanks having a total water capacity for a one source supply may be considered as a two-source supply where the occupancy of the building does not conflict with Rules 38, 39 and 40 hereinafter provided for.

Rule 13. Sprinkler Spacing. Sprinkler heads and lines shall be spaced as herein provided:

Mill Construction. Under mill ceiling (smooth solid plank and timber construction, 5 to 12 foot bays) on line of sprinklers shall be placed in the center of each bay and the distance between the heads on each line shall not exceed the following:

- (a) For Standard one-half (½) inch heads—
 - 8 feet in 12 foot bays;
 - 9 feet in 11 foot bays;
 - 10 feet in 10 foot bays;
 - 11 feet in 9 foot bays;
 - 12 feet in 5 to 8 foot bays;

- (b) For Conran* one (1) inch heads—
 - 20 feet in 5 to 12 foot bays.

- (c) For Conran* one and one-quarter (1¼) inch heads—
 - 25 feet in 5 to 12 foot bays.

- (d) Vaults used for the storage of nitro-cellulose products and vaults used for the storage of inflammable motion picture films shall have on standard one-half (½) inch head for each 62½ cubic feet of available storage space, or one (1) inch Conran* head for each 250 cubic feet of available storage space.

Measurements shall be taken from center to center of timbers.

Ceilings of modified mill construction having bays less than three (3) feet wide shall be treated as open joist construction and sprinkler heads and lines spaced accordingly.

Bay timbers spaced three (3) feet or more on centers, but less than five (5) feet on centers, will require special ruling by the administrative official having jurisdiction.

Joisted Construction. Under open finish joisted construction ceilings, floor, decks and roofs, the sprinkler lines shall be run at right angles to the joists and the heads "Staggered spaced" so that heads on one line will be opposite a point half way between heads on adjacent lines.

- (a) For Standard one-half (½) inch heads the distance between lines of sprinklers shall not exceed ten (10) feet, and the distance between heads on each line shall not exceed eight (8) feet, the end heads on alternate lines being spaced not more than two (2) feet from wall or partition. Permission may be given by the administrative official having jurisdiction to install but one line of sprinklers, in each bay where girders project below the under side of joists and divide the ceiling into bays ten (10) to eleven and one-half (11½) feet wide from center to center of girders, and the heads shall then be spaced on each line so that the area covered by a single head does not exceed eighty (80) square feet. In all cases where such bays are over eleven and one-half (11½) feet wide, two or more lines of sprinklers shall be installed in each bay as required by the rules for spacing.

*Wherever the term "Conran head" is used in these Rules, it is to be taken as meaning either a Conran head of the type tested and approved by the Fire Department, or one that has passed similar tests by the Fire Department.

PUBLIC HEARING

Where girders and joists are flush at the bottom, heads shall be spaced according to the general rule.

(b) For Conran* one (1) inch heads the distance between adjacent lines shall not exceed twenty (20) feet and the distance between the heads on each line shall not exceed sixteen (16) feet, the end heads on alternate lines being spaced not more than four (4) feet from wall or partition. Where girders project below the under side of joists and divide the ceiling into bays not exceeding twenty (20) feet in width, measured from center to center of girders, one line shall be placed in the center of each bay. In bays exceeding twenty (20) feet in width at least two (2) lines shall be installed in each bay and in no case shall the distance between adjacent lines exceed twenty (20) feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads the distance between adjacent lines shall not exceed twenty-five (25) feet and the distance between the head on each line shall not exceed twenty (20) feet, the end head on alternate lines being spaced not more than five (5) feet from wall or partition. Where girders project below the under side of joists and divide the ceiling into bays not exceeding twenty-five (25) feet in width, measured from center to center of girders, one line shall be placed in the center of each bay. In bays exceeding twenty-five (25) feet in width at least two (2) lines shall be installed in each bay, and in no case shall the distance between adjacent lines exceed twenty-five (25) feet.

Smooth Finish, Sheathed or Plastered Ceilings. Under smooth finish, sheathed or plastered ceilings, in bays six (6) feet wide and over (measurements to be taken from center to center of timber, girder or other projection or support forming the bay), sprinkler heads and lines shall be spaced as follows:

(a) For standard one-half ($\frac{1}{2}$) inch heads—

One line of sprinklers shall be placed in the center of each bay for bays not exceeding twelve (12) feet in width, and the distance between the heads on each line shall not exceed the following:

- 8 feet in 12 foot bays;
- 9 feet in 11 foot bays;
- 10 feet in 6 to 10 foot bays.

Bays in excess of twelve (12) feet in width and less than twenty-three (23) feet in width, shall contain at least two (2) lines of sprinklers; bays twenty-three (23) feet in width or over shall have the lines therein not over ten (10) feet apart. In bays in excess of twelve (12) feet in width, not more than one hundred (100) square feet of ceiling area shall be allotted to any single head.

(b) For Conran* one (1) inch heads—

One line of sprinklers shall be placed in the center of each bay for bays not exceeding twenty (20) feet in width, and the distance between the heads on each line shall not exceed twenty (20) feet. Bays in excess of twenty (20) feet in width shall contain at least two (2) lines and in no case shall the distance between adjacent lines exceed twenty (20) feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads—

One line of sprinklers shall be placed in the center of each bay for bays not exceeding twenty-five (25) feet in width and the distance between the heads on each line shall not exceed twenty-five (25) feet. Bays in excess of twenty-five (25) feet in width shall contain at least two (2) lines and in no case shall the distance between adjacent lines exceed twenty-five (25) feet.

Fireproof Construction. The rules of slow-burning mill construction shall apply as far as practicable. The rule may be modified, however, the intent being to arrange the spacing of heads to protect the contents rather than the ceilings; but in no case shall the distance between a head on one line and a head on an adjacent line exceed the following:

(a) For standard one-half ($\frac{1}{2}$) inch heads, 12 feet.

(b) For Conran one (1) inch heads, 20 feet.

(c) For Conran one and one-quarter ($1\frac{1}{4}$) inch heads, 25 feet.

Distance From Walls. The distance from wall or partition to the first head on a sprinkler line shall not exceed one-half the allowable distance between the heads on such line. Additional heads may be required in the narrow pockets formed by bay timbers or beams and wall. Where beams, girders, columns, walls, partitions or other obstructions prevent the effective discharge of water, additional heads shall be installed to effectively sprinkle the area.

Vertical Shafts. In vertical shafts having inflammable sides, heads shall be provided within the shaft in addition to the head or heads at the tops of shafts, as follows:

(a) One standard one-half ($\frac{1}{2}$) inch head for each 200 square feet of inflammable surface.

(b) One Conran* one (1) inch head for each 400 square feet of inflammable surface.

(c) One Conran* one and one-quarter ($1\frac{1}{4}$) inch head for each 500 square feet of inflammable surface.

Such head or heads shall be installed at each floor when practicable, and always when shaft is trapped. Where practicable, heads shall be "staggered" at the alternate floor levels, particularly when only one head is installed at each floor level.

Pitched Roofs. Under a pitched roof sloping more steeply than one (1) foot in three (3) feet, heads shall be located in peak of roof, and those on either side of the peak shall be spaced according to the foregoing requirements. The distance between heads shall be measured on a line parallel with the roof. Where the roof meets the side wall or the floor line, the heads shall be placed not more than the following distance from such intersection:

(a) For standard one-half ($\frac{1}{2}$) inch heads, $3\frac{1}{2}$ feet.

(b) For Conran* one (1) inch heads, 7 feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, $8\frac{1}{2}$ feet.

Heads spaced not to exceed the following distance each way from the peak of roof, measured on a line parallel with the roof, may be used in lieu of heads located in peak of roof:

(a) For standard one-half ($\frac{1}{2}$) inch heads, $2\frac{1}{2}$ feet.

(b) For Conran* one (1) inch heads, 5 feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, $6\frac{1}{4}$ feet.

In sawtooth roof construction, the end heads on the branch line shall be spaced not to exceed the following distance from the peak of the sawtooth:

(a) For standard one-half ($\frac{1}{2}$) inch heads, $2\frac{1}{2}$ feet.

(b) For Conran* one (1) inch heads, 5 feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, $6\frac{1}{4}$ feet.

Special Locations and Variations. In special locations, such as over electric generating, power and transforming apparatus, over their controlling devices and switchboards, where water from the fire extinguishing equipment would be detrimental, the sprinkler lines and heads may be omitted at the discretion of the administrative official having jurisdiction, and when in his judgment a slight variation of this rule of spacing is desirable to effect a more efficient distribution of water for fire extinguishing purposes, the sprinkler lines and heads shall be spaced as he may direct.

Rule 14. Sprinkler Position. All sprinkler heads shall be located, wherever possible, in an upright position on top of the pipes, except that sprinkler heads on automatic wet pipe systems may be pendant on concealed piping and when construction or occupancy of a room or enclosure makes it preferable.

(a) Where standard one-half ($\frac{1}{2}$) inch heads are installed sprinkler deflectors shall be parallel to ceilings, roofs or the

PUBLIC HEARING

incline of stairs, but when installed in the peak of a pitched roof they shall be horizontal. Distance of deflectors from ceilings of mill or other smooth construction, or bottom of joists of open joist construction, shall be not less than three (3) inches nor more than ten (10) inches.

In fireproof buildings, the distance between deflectors and panel ceilings shall not exceed fifteen (15) inches.

Not less than eighteen (18) inches effective clear space shall be left below the sprinkler heads, so that they may discharge an unbroken spray blanket from sprinkler to sprinkler and sides of room when in operation. Any stock piles, racks or other obstructions interfering with such action shall not be permitted. *Sprinkler system piping shall not be used for the support of stock, clothing, etc.*

(b) Where Conran* heads are installed, the top of head shall be located the same distance below joists or ceiling as specified for deflectors in paragraph (a) of this rule; except that when heads are located under pitched roofs of piers or similar structures, they shall in general be installed in the upright position (not normal to slope of roof) and three (3) feet vertically below the underside of roof. When the administrative official having jurisdiction deems a variation of this rule advisable to obtain a more efficient distribution of water, the heads shall be located with respect to joists or ceiling, as he may direct.

Rule 15. Pipe Sizes. The number of heads on a given size pipe in one fire area in any story shall not exceed the following:

(a) For standard one-half ($\frac{1}{2}$) inch heads—

Size of Pipe	Maximum No. of Heads Allowed
$\frac{3}{4}$ inch	1 head
1	2 heads
$1\frac{1}{4}$ "	3 "
$1\frac{1}{2}$ "	5 "
2	10 "
$2\frac{1}{2}$ "	20 "
3	36 "
$3\frac{1}{2}$ "	55 "
4	80 "
5	140 "
6	200 "
7	300 "
8	420 "

(b) For Conran* one (1) inch heads—

Size of Pipe	Maximum No. of Heads Allowed
1 inch	1 head
$1\frac{1}{4}$ "	2 heads
$1\frac{1}{2}$ "	3 "
2	4 "
$2\frac{1}{2}$ "	6 "
3	9 "
4	18 "
5	34 "
6	51 "
7	75 "
8	105 "

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads—

Size of Pipe	Maximum No. of Heads Allowed
$1\frac{1}{4}$ inch	1 head
$1\frac{1}{2}$ "	2 heads
2	3 "
$2\frac{1}{2}$ "	4 "
3	6 "
4	12 "
5	21 "
6	40 "
7	60 "
8	84 "

When it is desired to use pipe of larger size than eight (8) inches in diameter, special ruling will be required of the administrative official having jurisdiction as to the permissibility of its use and the number of heads that may be fed thereby.

Where practicable, it is desirable to arrange the piping so that the number of heads on a branch line will not exceed eight.

When the piping is arranged on the "gridiron" plan, the permissible number of heads may be doubled, provided the feed main is of the size indicated in the schedule for the total number of heads.

Where feed mains supply branch lines of only two heads each, the conditions approach those of long single line. Such feed mains shall usually be centrally supplied where there are over eight (8) or ten (10) branch lines. Branch lines up to fourteen (14) in number may be fed from end provided a two and one-half ($2\frac{1}{2}$) inch pipe does not supply more than sixteen (16) standard one-half ($\frac{1}{2}$) inch heads in lieu of twenty (20).

Buildings having slatted floors, or large unprotected floor openings without approved stops, shall be treated as one room with reference to the pipe sizes, and the feed main shall be of sufficient size to accommodate the number of heads called for. Larger pipe sizes than are allowed in the schedule for a given number of heads may be required wherever the construction or conditions introduce unusually long runs of feed mains or many angles. Buildings with blind attics with small unprotected openings to floor below, may be piped from the system on the ceiling of floor below, provided pipe size schedule is not overloaded on sizes three (3) inches or under.

Rule 16. Feed Mains. The size of feed mains shall not be less than the size of riser and shall be arranged to run as direct as possible from source of water supply to riser.

Feed mains for stair or other towers without approved stops between floors, when piped on independent riser, shall be of sufficient size to accommodate the total number of sprinklers in such tower.

Rule 17. Risers. There shall be one or more separate risers in each building and in each section of the building, divided by fire walls. Risers shall be arranged to provide "Center Central" or "Side Central" supply to feed main. Each riser shall be of sufficient size to supply all the heads on said riser in one story, according to the schedule of pipe sizes in Rule 15.

In buildings of fireproof construction, and for the purposes of this rule, a blank wall, or one in which the opening are protected by standard fire doors, may be considered as a fire wall, if of equivalent construction.

If the conditions warrant, special permission will be granted allowing the heads in a fire section of small area to be fed from the risers in another section, provided the total number of heads in such area does not exceed the following number per floor:

(a) For standard one-half ($\frac{1}{2}$) inch heads, 48.

(b) For Conran* one (1) inch heads, 12.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, 8.

Risers shall not be located close to windows, properly protected from mechanical injury and freezing and shall be properly supported on foundations and by floor plates, clamps, couplings or hangers.

No connections, such as for sill cocks, house service or hose outlets, shall be made with a sprinkler system riser or any part thereof.

Where gravity and pressure tanks feed through a common discharge pipe or "dead riser" to the foot of a riser and an air lock is likely to develop the discharge pipe of the gravity tank shall connect with the discharge pipe, or "dead riser", forty (40) feet below the bottom of the pressure tank.

PUBLIC HEARING

le 18. Pipes and Fittings. All pipe shall be full-weight and wrought iron or steel threaded pipe, well reamed and screwed up tight into fittings without reducing the way. Fittings shall be standard cast iron fittings, and shall be long turn pattern on feed mains and risers.

Each fitting shall be designed and guaranteed for a working pressure of 150 pounds per square inch and must be capable of withstanding a hydrostatic test pressure of 750 pounds per square inch without failure.

Each pipe shall be secured to the ceiling, walls and other parts of the building with standard steel, wrought or malleable iron hangers.

Extra heavy fittings shall be employed where the normal pressure in the pipe system exceeds one hundred and fifty pounds per square inch, and shall be designed for a working pressure of 250 pounds per square inch and be capable of withstanding a hydrostatic test pressure of 1,250 pounds per square inch without failure.

Underground pipe shall comply with the specifications of the American Water Works Association.

le 19. Protection of Pipes and Sprinklers. When exposed to moisture, sprinkler pipes and hangers shall be protected against corrosion whenever found necessary by thoroughly cleaning the pipe of all scale and grease and painting with a coat of red lead and linseed oil paint or other suitable moisture resistive paint. When exposed to chemicals, the pipe and fittings shall be coated with graphite or other approved chemical resistive paint. Care shall be taken not to paint the sprinkler heads.

Supply pipes of risers in low basements or low spaces or ground floors exposed to frost, shall be properly protected by a masonry or wood enclosure, properly heated, or covered with mineral wool, sawdust or tar mixed with granular cork, extending below bottom of pipe and through the flooring of ground floor, or the pipe shall be protected with three alternate layers of one-inch hair felt and building paper or by other approved method. When of wood, the enclosure shall be constructed double with a layer of paper between the two thicknesses of wood.

Where risers, drains, heating pipes, etc., pass through concrete floors or partitions, they shall be protected with a metal sleeve or be grouted with cement mortar.

Whenever sprinklers are exposed to corrosion, the heads shall be protected with an approved hermetically sealed cover, with an approved wax coating.

le 20. Drainage. All sprinkler pipe and fittings shall be installed that they can be thoroughly drained, and where practicable, all piping shall be arranged to drain at main drips.

Risers or drip pipes shall be so arranged as not to expose any part of the sprinkler system to frost, and shall be connected, either by check valves or other means, so that they will not [overthrow] overflow domestic service or other connections to the same sewer or house drain, or if connected through the wall and exposed to the weather, they shall be fitted with hoods or down-turned elbows.

Risers, pitched not less than one-quarter ($\frac{1}{4}$) inch in ten (10) feet, shall be installed:

- at the base of the main riser;
- at each alarm valve;
- at each dry-pipe valve;
- at each gravity tank;
- at each pressure tank;
- at each fire department connection;
- at each floor, if independent floor control valves are used;

At each supply main, when the water in the same can be removed through any of the above drains. Such drains shall be installed with controlling valves so that flow tests may be made to determine if the water supplies connections from yard mains to the inside of the building

are in order without causing water damage or overflowing service connections to the same house drain. Any such drain shall be not less than two (2) inches in size except that drains at independent floor valves [may be one and one-quarter ($1\frac{1}{4}$) inches in size] shall be not less than 1 inch in size where floor valves are not over $2\frac{1}{2}$ inches in size and $1\frac{1}{4}$ inches where floor valves are larger, and connected to a main drain riser of not less than $1\frac{1}{2}$ inches in size. The drain at the main riser shall discharge into a cone or sight drain, or if carried through the wall and exposed to the weather, it shall be fitted with a hood or down-turned elbow.

At an alarm valve at the top of a riser in a down-fed system a drain shall not be required.

At each gravity or pressure tank erected above roof of a building there shall be a 4-inch valved drain connection so arranged as to discharge on roof of building. And where a tank is on a separate structure altogether independent of buildings drain connection to be arranged to discharge at ground level.

On automatic wet pipe systems, the horizontal branch pipes shall be pitched not less than one-quarter ($\frac{1}{4}$) inch in ten (10) feet to drain towards the sources of supply with drip valves at the low points.

On automatic dry-pipe systems, branch pipes shall be pitched at least one-half ($\frac{1}{2}$) inch in ten (10) feet.

Rule 21. Test Pipe. [On] In all wet-pipe automatic sprinkler systems a test pipe of not less than $\frac{3}{4}$ inch in diameter shall be connected directly with each [riser] system but shall be connected to a pipe of not less than $1\frac{3}{4}$ inches in diameter in upper story and arranged to discharge, through a $\frac{1}{2}$ -inch brass outlet, preferably to a point where it can readily be seen. With long runs or many angles, size of test pipe [shall] should be increased to one (1) inch or larger. Controlling valve should be located at a sufficient distance from where the test pipe passes through the wall of the building so as to reduce to a minimum the chance of freezing of water in test pipe.

In all dry-pipe automatic sprinkler systems a $\frac{3}{4}$ -inch inspector's test pipe shall be installed at the end of the most distant branch line and fitted with a $\frac{3}{4}$ -inch shut-off valve stopped with a brass plug.

Rule 22. Pressure Gauges. A four and one-half ($4\frac{1}{2}$) inch double-spring Bourdon pressure gauge shall be provided in all automatic sprinkler systems as follows:

- Above dry-pipe valves;
- Below dry-pipe valves;
- At the pressure tank;
- At the air compressor;
- Above the alarm valve;
- Below the alarm valve; and

In the connections from city water supply.

Provision may be made for taking the pressure both above and below the alarm valve and the dry-pipe valve with only one gauge at each valve.

A gauge shall not be required at an alarm valve located at the top of a riser in a down-fed system.

Gauge connections shall be taken from the supply main or riser and not from the two-inch drain or test pipe.

Gauges shall be installed in a suitable place protected from freezing and be controlled by a valve with arrangements for draining. A plugged outlet, not less than one-quarter ($\frac{1}{4}$) inch in size, shall be located between each valve and gauge for purpose of installing the inspector's gauge.

Rule 23. Valves. All valves two (2) inches in diameter and under shall be of brass or bronze, or other approved [non-corrodible] non-corrosive material. Valves over two (2) inches in diameter shall be of brass, or bronze or iron body, brass mounted, or of other approved [non-corrodible] non-corrosive material.

All sidewalk Siamese inlet valves, caps and chains shall be of galvanized cast iron or other approved [non-corrodible] non-corrosive material.

PUBLIC HEARING

All gate valves shall be solid or double wedge disc, suffing box pattern with hand wheel, outside screw and yoke, or other approved indicator pattern.

All check valves shall be approved straight way regrinding pattern, so built that the clappers may be readily removed for repairs.

Rule 24. Water Supply Gate Valves. The piping connecting each source of water supply with the sprinkler system shall be provided with a gate valve of the outside screw and yoke type, sealed open and tagged to designate its purpose, so located as to control each source of water supply except that from fire department hose connections. All such gate valves shall be located within the building where easily visible and readily accessible and as close as possible to the supply inlet.

Rule 25. Water Supply Check Valves. The piping connecting each source of water supply with the sprinkler system, including fire department connections, shall be provided with a check valve.

On two-source systems, check valves shall have a gate valve on each side to permit repair of check without shutting off both supplies, except that where the two sources of supply consist of tanks located above the highest line of sprinklers, a gate valve need only be provided on the downstream side of each check valve.

Rule 26. Control Valves. All automatic sprinkler systems shall be provided with a main control or shutoff valve arranged to be readily accessible and sealed in the open position; except that when the sprinkler system is fed from water supplies on the roof of the building, independent and readily accessible floor control valves, sealed in the open position, may be installed.

When not more than ten (10) standard one-half ($\frac{1}{2}$) inch sprinkler heads or three (3) Conran* heads in any automatic wet pipe system are exposed to cold and subject to freezing, shutoff valves may be provided to discontinue the water supply to such heads between November 1 and April 1. A greater number of heads than specified above, located in places which cannot be properly heated, shall be controlled by an automatic dry-pipe valve.

Rule 27. Dry-Pipe Valves. A dry-pipe valve shall be taken to mean a valve automatically controlling the water supply of the sprinkler system in such a manner that under normal conditions its piping system beyond the valve is maintained dry, but in the event of fire, the valve automatically releases the water into the sprinkler system, for fire extinguishing purposes.

Dry-pipe valves shall, for the purpose of these rules, be classified as follows:

Type A, in which the valve is actuated by the release of compressed air in the sprinkler piping system, due to the opening of a sprinkler head; and

Type B, in which the valve is actuated by an approved trip under electric control of an approved automatic thermostatic fire alarm system.

Dry-pipe valves shall be located as near as practicable to the sprinkler system in an enclosed and accessible place protected from mechanical injury and freezing.

When anti-columning pipes are used, they shall be either lead lined or of brass.

Automatic wet-pipe sprinkler systems in which only twenty-five (25) per cent of the heads are required to be maintained dry for protection from freezing, shall have only such heads under dry-pipe valve control.

(a) When "Type A" valve is installed, the air pressure in sprinkler systems under such dry-pipe valve control shall not exceed forty (40) pounds per square inch, nor be permitted to fall below twenty-five (25) pounds per square inch, nor shall it be less than one-sixth ($\frac{1}{6}$) of the water pressure in any case.

The air compressor shall have a capacity of not less than eleven (11) cubic feet per minute and the air supply for the pump shall be taken, if possible, from a room containing dry air, or it shall be passed through a drying chamber containing calcium chloride, in order to avoid the introduction of moisture into the system.

The air pressure on such dry-pipe systems shall be maintained throughout the year.

Not more than the following number of heads shall be controlled by one "Type A" dry-pipe valve:

- (a) For standard one-half ($\frac{1}{2}$) inch heads400
- (b) For Conran* one (1) inch heads100
- (c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads 64

Where equipped with an approved quick-opening device the following number of heads may be controlled by one "Type A" dry-pipe valve:

- (a) For Standard one-half ($\frac{1}{2}$) inch heads800
- (b) For Conran* one (1) inch heads200
- (c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads.128

(b) When "Type B" valve is installed the actuating alarm system shall be designed to operate at a temperature lower than that required to open the sprinkler heads, and all connections between the alarm system and the dry-pipe valve shall be adequately protected against injury of any kind.

When required by the administrative official having jurisdiction, the dead end of every feed main in such dry-pipe system shall be provided with an air relief valve or vent, so constructed as to be normally open in order to permit the free escape of air from the system, but to close automatically against the escape of water.

Not more than the following number of heads shall be controlled by one "Type B" dry-pipe valve:-

- (a) For Standard one-half ($\frac{1}{2}$) inch heads500
- (b) For Conran* one (1) inch heads125
- (c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads. 84

Rule 28. Alarm Valve. All automatic wet pipe sprinkler systems shall be equipped with an alarm valve so constructed that a flow of water through a one-half ($\frac{1}{2}$) inch orifice will operate an electric or mechanical gong.

Dry pipe valves shall be equipped with a reliable device to give either an electrical or mechanical alarm.

Rule 29. High and Low Water and Pressure Alarm. All gravity tanks shall be equipped with a device to indicate when the water falls below or rises above the normal level in the tank, with an indicator or alarm located in the engineer's room near the pump.

All pressure tanks shall be equipped with a device to indicate when the pressure in the tank falls below seventy (70) or rises above eighty (80) pounds per square inch with an indicator or alarm located in the engineer's room [near the compressor.].

Rule 30. Heating of Tanks. The water in all sprinkler tanks subject to freezing shall be protected by internally heating the water or enclosing the tank in a frost-proof house properly heated and lighted.

Rule 31. Concealed Pipe Systems. All pipe in concealed pipe systems shall be of standard full-weight wrought iron or steel, painted with two coats of protective paint, one before and one after installation. Such pipe shall be installed in ducts or be encased in cement mortar and shall be inspected prior to concealment. When installed in the concealed space between floor arches and ceiling, such pipe shall be supported by hangers and all pipe, fittings and hangers be protected with two coats of paint.

Rule 32. Preparation of Building. Floor or wall openings and other structural defects which prevent the banking up of heated air and retard the automatic action of sprinkler heads shall be provided with the necessary curtain boards and draft stops to permit specific control of the fire by the local sprinklers.

Curtain boards shall project at least three (3) inches below the lowest sprinkler.

PUBLIC HEARING

Rule [33] 33. *Approval of Sprinkler System [Tests].* Before erection all automatic sprinkler systems, excluding the water supply tanks, shall be subjected after installation to a static pressure of a test of at least fifty (50) pounds per square inch in excess of that which will be normally required and observed in the sprinkler system, such test pressure, however, never to be less than one hundred and (150) pounds per square inch in any part of the system.

pressure tanks shall be tested after erection to a test pressure of one and one-half (1½) times the working pressure. To prevent the possibility of serious water damage in case of a break, the pressure shall be maintained by a pump, the main controlling gate being meanwhile shut. Brine or other corrosive chemicals shall not be used for testing systems.

automatic dry-pipe systems with "Type A" valve containing an air pressure of forty (40) pounds per square inch shall be pumped up, be held for twenty-four (24) hours, all leaks stopped which allow a loss of pressure of over (2) pounds per square inch for the twenty-four (24) hours.

in the case of automatic dry-pipe systems with different "Type A" valve, the valve shall be held off its seat during the test to prevent injuring the valve.

non-automatic systems shall be tested after installation at less than fifty (50) pounds per square inch in excess of the pressure necessary to reach the highest line of sprinkler.

all tests of installed systems shall be made by the contractor or in the presence of the Fire Commissioner, or his authorized representative.

no piping, devices nor any portion of a newly constructed sprinkler system shall be covered up or permanently concealed until tested by the Bureau of Fire Prevention and approved of in writing, except piping passing through floors, partitions or beams for distances equal to the thickness of such floors, walls, partitions or beams.

Rule 34. *Non-fireproof Business Buildings.* Automatic sprinklers required in non-fireproof business buildings under the provisions of Chapter 5, Article 4, Section 72, Code of Ordinances, unless otherwise specifically provided in these rules, shall consist of at least a One Source System.

Rule 35. *Dangerous or Hazardous Buildings.* Automatic sprinklers required in buildings having occupancies considered to be dangerous or hazardous by the Fire Commissioner shall consist of at least a one-source system unless otherwise specifically provided for in these rules.

Rule 36. *Factories and other Buildings.* Automatic sprinklers required in buildings under the provisions of the Code of Ordinances and the Labor Law shall consist of at least a one-source system.

Rule [35] 37. *Theatre Buildings.* Automatic sprinklers required in theatre buildings under the provisions of Chapter 10, Article 25, Section 524, Code of Ordinances, shall consist of at least a One Source System.

Rule [36] 38. *Firework Storage.* Automatic sprinklers required in buildings in which fireworks are stored or sold under the provisions of Chapter 10, Article 6, Section 92, Code of Ordinances, shall consist of a Two Source System.

Rule [37] 39. *Nitro-Cellulose Products.* Automatic sprinklers as required in buildings in which nitro-cellulose products are stored under the provisions of Chapter 10, Article 19, Section 232, Code of Ordinances, shall consist of a system supplied from both approved gravity tank supply and an approved pressure tank supply, except that no change shall be required in supplies to automatic sprinkler equipments previously approved by the Fire Commissioner as two source systems, in conformity with the provisions of this rule as in force up to December 1, 1921.

In buildings wherein are stored or handled only limited quantities of nitro-cellulose products, not exceeding 500 pounds, the automatic sprinklers may consist of a two source system as provided for in Rule 12.

Rule [38] 40. *Inflammable Motion-Picture Films.* Automatic sprinklers, required in buildings in which inflammable motion-picture films are stored under the provisions of Chapter 10, Article 20, Section 241, Code of Ordinances, shall consist of a system supplied from both an approved gravity tank supply and an approved pressure tank supply except that no change shall be required in supplies to automatic sprinkler equipments previously approved by the Fire Commissioner as two source systems in conformity with the provisions of this rule as in force up to December 1st, 1921.

Rule [39] 41. *Existing Installations and Approvals.* Automatic extinguisher systems and devices heretofore approved and accepted by the authorities having jurisdiction shall not be required to conform to the provisions of these rules; and all such systems heretofore installed shall not be required to be altered to conform to these rules so long as the fire hazard due to construction and occupancy of the building is not increased or where substantial additions or extensions in height or area is made to the building when these rules shall apply if deemed advisable or necessary by the Fire Commissioner and the system after inspection is found to be in good working order.

Rule 42. *Communicating Openings.* When a building fully equipped with sprinklers communicates with another not so equipped the openings must be protected by approved fire doors on both sides of the wall, one of which must be automatic.

Rule 43. *Maintenance Inspections.* Automatic sprinkler systems shall be inspected at least once a month by the person in charge of the building, or by other competent person employed by the owner, to see that all parts of the system are in perfect working order, and the fire department connection or connections, if any, ready for immediate use by the Fire Department. A detailed record of each inspection shall be kept for examination by a representative of the Fire Department.

There shall be kept available at all times in the premises a supply of extra sprinklers, never less than six (6), to replace promptly any fused or damaged sprinklers. And there shall be one or more employees instructed in the maintenance of sprinkler system.

Rule 44. *Open Sprinklers.* When open sprinklers are required for exposure protection by the Fire Department as specified in the Building Code they shall be installed in accordance with the rules of the National Board of Fire Underwriters. Plans for such installation to be filed with the Fire Department for approval.

WARNING.

Notice is hereby given to all petitioners, appellants and applicants for relief at the hands of the Board of Standards and Appeals and of the Board of Appeals, and to all lawyers, architects and engineers representing owners or lessees in proceedings before these boards—

First, That if they do not appear in person or by representative at the hearing on their case, dismissal for lack of prosecution is likely to result.

Second, That due and ample notice of the date set for hearing is provided in the publication in this BULLETIN of the calendars of these boards, each case being set down by Calendar Number and premises under the date of the hearing.

Third, That no plea of ignorance of the date of the hearing can be entertained in view of this publication and

of the posting of the calendars on the bulletin board in the offices of the board and of the further publication of the calendars in the daily press.

Fourth, That no one is entitled to written notice of the date for the hearing in his case, and that the plea of failure to receive such notice is no excuse for neglect to appear.

Fifth, That the business of these boards is to dispose of all cases promptly, for the reason that the pendency of an appeal or petition ties the hands of the administrative official in enforcing his order; therefore, no appeal or petition will be allowed to be hung up by reason of failure of the appellant or petitioner to file necessary data, or by any other method of delay.

Office—Municipal Building, Rooms 1001 to 1015.

Telephone—Worth 0184.

Office Hours—9 a. m. to 5 p. m. Saturdays, 9 a. m. to 2 noon.

Communications should be addressed to the chairman of the board.

CONTENTS

This issue of the Bulletin contains, in the order

—
Docket.
Call of Clerk's Calendar.
The Trial Calendar.
Notices in Building Zone Cases.
Minutes of Meeting, Board of Appeals, June 9, 1925.
Minutes of Special Meeting, Board of Appeals, June 9, 1925.
Corrections.
Notice of Public Hearing.
Progress Report.
Amendment to Building Zone Resolution.

DATES AND HOURS OF MEETING.

Board of Appeals, Tuesdays, at 10 a. m.
Special meetings as listed in this Calendar.
Call of Clerk's Calendar, Tuesdays, at 2 p. m.
Board of Standards and Appeals, as listed in the Calendar.
All hearings are held in Room 1013, Municipal Building, Manhattan.

HOURS FOR CONSULTATION.

10 A. M. to 1 P. M.

Any person desiring to consult the chairman or the engineers, pertaining to the work of either board, will be seen only between the hours of ten in the morning and one in the afternoon—Saturdays excepted.

CALL OF CLERK'S CALENDAR.

The Clerk's Calendar consists of applications under the Building Zone Resolution, and its object is to give interested property owners opportunity to file objections, if any, and will be called in Room 1013, Tuesday, June 16, 1925, at 2 o'clock. At this call each case is set for hearing on a definite day.

The next subsequent Call of the Calendar will be on Tuesday, June 23, 1925, at 2 o'clock.

The Clerk's Calendar is not to be confused with the calendar of cases that have been definitely set for hearing on fixed days.

NOTICE TO APPELLANTS AND PETITIONERS.

No appeal, application or petition will be entertained in connection with which court proceedings are pending or in progress, nor accepted that are not filed within twenty days from the date of the action of the Administrative Official.

Any communication purporting to be an appeal, application or petition shall be regarded as a mere notice of intention to seek relief until it is filed on the form required by the rules of this board.

Upon receipt of any such communication the writer will be supplied with the official forms for presenting his appeal, application or petition, and if he fails to supply the data required thereon, within twenty days, his case may be dismissed for lack of prosecution.

At the time of filing an application, the appellant or petitioner shall forward a signed notice of appeal addressed to the administrative official (either superintendent of buildings or fire commissioner) and file with this board a duplicate of said notice.

Petitioners are advised that their plans must indicate the points of the compass so as to establish the true location and position of the property, the subject of the appeal.

Appeals, applications and petitions will be simplified and expedited by conforming to these directions.

WILLIAM E. WALSH, Chairman.

CALL OF CLERK'S CALENDAR.

Tuesday, June 16, 1925, at 2 p. m.

Building Zone Cases.

1429-24-BZ.
APPLICANT—John De Hart, for John J. Daly and M
L. Fried, owners.
PREMISES—1012-1018 Avenue St. John, The Bronx.
TO PERMIT in a business district the maintenance of
motor vehicle repair shop.
289-25-BZ.
APPLICANT—William F. Doyle, for Max Zaubl
owner.
PREMISES—553-559 11th street, Brooklyn.
TO PERMIT partly in a business district and partly in
residence district the erection and maintenance o
an extension to an existing garage for the storage
of more than five (5) motor vehicles.
291-25-BZ.
APPLICANT—Hollywood Garage Corp., owner.
PREMISES—238-244 East 64th street and 1207-1209 Se
ond avenue, Manhattan.
TO PERMIT in a business district the alteration and ex
largement of a garage for the storage of more tha
five (5) motor vehicles.
359-25-BZ.
APPLICANT—William H. Kehoe, for Horlick Realt
Corp., owner.
PREMISES—1026-1042 Liberty avenue, Brooklyn.
TO PERMIT in a business district the erection of a garag
for the storage of more than five (5) motor veh
cles.
400-25-BZ.
APPLICANT—James Kearney, for Barnet Simowitch an
Abe Frank, owners.
PREMISES—247-249 West 69th street, Manhattan.
TO PERMIT the alteration and also the conversion o
occupancy of a building used as a storage ware
house to a garage for the storage of more tha
five (5) motor vehicles.
1360-24-BZ.
APPLICANT—Abraham G. Cohen, for Liberty Propert
Corporation, owner.
PREMISES—11601 Liberty avenue, Richmond Hill, Bor
ough of Queens.
TO PERMIT in a residence district extending from a busi
ness district the alteration and extension of an
existing building used for business purposes.

- 7-24-A—8746 123rd street, Richmond Hill, Queens.
- 0-24-A—1038 Ocean avenue, Brooklyn.

Under the Building Zone Resolution.

NOTICE IS HEREBY GIVEN by the board of appeals a public hearing under the provisions of the building zone resolution, Tuesday morning, June 16, 1925, at 10 o'clock, Room 1013, Municipal Building, on the following mat-

- L. NO. 1522-24-BZ—Application, December 27, 1924, under the building zone resolution, of John J. Dunnigan, applicant, on behalf of Hugo Seidenberg, owner, to permit in a residence district the maintenance of a building used for store purposes on the 1st story; premises 129-02 Newport avenue, northwest corner of 129th street, Belle Harbor, Borough of Queens.
- L. NO. 136-24-BZ—Application, January 29, 1924, under the building zone resolution, of John J. Dunnigan, applicant, on behalf of Max Katz, owner, to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles; premises 809 Union avenue, The Bronx.
- L. NO. 1399-24-BZ—Application, November 25, 1924, under the building zone resolution, of John J. Dunnigan, applicant, on behalf of Frederick P. Ballard, owner, to permit partly in a business district and partly in a residence district the alteration and change of occupancy from a stable and private garage to a garage for the storage of three (3) commercial and two (2) pleasure motor vehicles, two (2) spaces rented to persons not residing on the premises; premises 708 East 216th street, The Bronx.
- L. NO. 221-25-BZ—Application, February 24, 1925, under the building zone resolution, of John J. Dunnigan, applicant, on behalf of Joseph Zimmerman and Abraham Mitchell, owners, to permit in a business district the erection and maintenance of a garage for the storage of more than

five (5) motor vehicles; premises 166-172 South 1st street, Brooklyn.

CAL. NO. 1091-24-BZ—Application, September 2, 1924, under the building zone resolution, of John W. Clancy, applicant, on behalf of Valballe Corporation, owner, to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles; premises 341 East 184th street, northwest corner of Marion avenue, The Bronx.

CAL. NO. 110-25-BZ—Application, January 26, 1925, under the building zone resolution, of Edward P. Doyle, applicant, on behalf of Brecher Building Corp., owner, to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles; premises southeast corner of Washington avenue and Fifth avenue, Long Island City, Queens.

CAL. NO. 545-24-BZ—Application, May 12, 1925, under the building zone resolution, of Henry I. Perlin, applicant, on behalf of Bertha Freitag, owner, previously dismissed for lack of prosecution, to permit in a residence district the maintenance of a garage for the storage of five (5) pleasure motor vehicles, four (4) spaces rented to persons not residing on the premises; premises 380 Etna street, Brooklyn.

CAL. NO. 324-25-BZ—Application, March 26, 1925, under the building zone resolution, of Eugene De Rosa, architect, on behalf of Small's Queens Circuit, Inc., owner, to permit in a residence district extending from a business district the erection and maintenance of a building to be used as a motion picture theatre; premises west side of Junction boulevard, 88 feet 8 $\frac{3}{4}$ inches north of Roosevelt avenue, Elmhurst, Borough of Queens.

CAL. NO. 319-25-BZ—Application, March 25, 1925, under the building zone resolution, of Hector McG. Curren, applicant, on behalf of Melchior Lenke, owner, to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles; premises south side of Germania place, 150 feet west of Nostrand avenue, Brooklyn.

CAL. THE VOTE TO GRANT—

Affirmative	0
Negative: Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison, Connell and Fire Chief Kenlon	6
Absent: Mr. Holland	1

THE RESOLUTION:

(366-25-A)

WHEREAS, Charles N. Whinston & Bro., for Morris Tobias, lessee, filed, April 3, 1925, an appeal, with the board of appeals, from a decision of the fire commissioner, affecting premises 637-649 West 125th street, Manhattan; and

WHEREAS, the decision of the fire commissioner, rendered February 20, 1925, reads:

"1. Install a 4 in. regulation standpipe line with a 3500 gallon tank on roof and a 65 gallon pump in cellar for filling same. All as per approved plan, Alteration No. 2088-1924."

and

WHEREAS, the building is in an unrestricted district, faces on two streets, is non-fireproof, four stories (61 ft. 6 in.)

in height, having a frontage of 139 ft. on West 125th street, a frontage of 125 ft. on West 126th street and average depth of approximately 150 ft.; the area be approximately 18,000 sq. ft. OCCUPIED: Part of story, stores, and the remainder of the premises as a garage, 12 persons in the entire premises; and

WHEREAS, appellant contends that the building is equipped with a 5 in. line, connected to the street main, and 4 in. risers with 50 ft. of hose at each outlet, and contends further that the pressure in the city main is 40 pounds per sq. in.

Resolved, that the decision of the fire commissioner be and it hereby is affirmed, and the appeal be and it hereby is denied.

170-25-A.

APPELLANT—Samuel F. Moran, for Menkors Realty Co., owner.

SUBJECT—Appeal from decision of fire commissioner.

PREMISES AFFECTED—South side Roosevelt avenue from 21st to 22nd streets, Elmhurst, L. I., Queens.

APPEARANCES—

For Appellant: James A. Byrne.

For Administration: Inspector Carroll of fire department.

ACTION OF BOARD—Appeal granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison, Connell and Fire Chief Kenlon

Negative

Absent: Mr. Holland

THE RESOLUTION:

(170-25-A)

WHEREAS, Samuel F. Moran, for Menkors Realty Co., owner, filed, February 10, 1925, an appeal, with the board of appeals, from an order of the fire commissioner, affecting premises south side of Roosevelt avenue from 21st to 22nd streets, Elmhurst, Borough of Queens; and

WHEREAS, the order of the fire commissioner, dated January 21, 1925, reads:

"3. Install a 4 in. regulation standpipe line with 3500 gallon tank above roof as per Section 581, Chapter 5, Code of Ordinances, and as per Rules of the Board of Standards and Appeals. Show all details of same on plan and section."

and

WHEREAS, the building is non-fireproof, two stories (61 ft.) in height, having a frontage of 238 ft. on Roosevelt avenue and a frontage of 100 ft. on 22nd street and also 100 ft. on 21st street; OCCUPIED as a public garage for more than five motor vehicles; and

WHEREAS, appellant contends that the building is located in height and faces on three streets, that there are four city hydrants in the immediate vicinity; that the premises are equipped with a 2½ in. standpipe system, connected by a 4 in. line to the existing 16 in. city main in Roosevelt avenue; the water pressure in said main, as per letter from Citizens Water Supply Company, being from 55 to 60 lbs., and appellant proposes to install a 4 in. standpipe line in lieu of the existing 2½ in. line.

Resolved, that the order of the fire commissioner be and it hereby is modified, and the appeal be and it hereby is granted, only so far as it affects the installation of gravity tank, on condition that 4 in. street connection shall be made direct to city main; and that the standpipe equipment otherwise shall comply with the rules in all respects.

431-25-A.

APPELLANT—O'Connor & Bain, for Lotos Oil and Distributing Corp., owner.

SUBJECT—Appeal from order of fire commissioner.

PREMISES AFFECTED—218th to 220th street and Harlem River, Manhattan.

MINUTES

APPEARANCES—

For Appellant: John J. O'Connor and Wm. Michels, Jr.

For Administration: Inspector Carroll of fire department.

ACTION OF BOARD—Report of committee adopted and appeal granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE TO ADOPT REPORT OF COMMITTEE OF INSPECTION AND TO GRANT APPEAL—

Affirmative: Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison, Connell and Fire Chief Kenlon 6
Negative 0
Absent: Mr. Holland 1

THE RESOLUTION:

(431-25-A)

WHEREAS, O'Connor & Bain, for Lotos Oil & Distributing Corp., owner, filed, April 21, 1925, an appeal, with the board of appeals, from an order of the fire commissioner, affecting premises 218th to 220th street and Harlem River, Manhattan; and

WHEREAS, the order of the fire commissioner, dated April 7, 1925, reads:

"5. All storage tanks comprising or forming a part of an oil storage plant shall be buried so that the tops thereof shall be at least two feet below the grade level.";

WHEREAS, the premises consist of a plot of ground, lying between Ninth avenue and Harlem River, 320 ft. by 110 ft. in area, upon which is located the oil storage and distributing plant of the Lotos Oil and Distributing Corp., consisting of an office, a pump house and also twelve (12) 1,500 gallon storage tanks, each 11 ft. in diameter and 4 ft. long, used for the storage of gasoline; the tanks being located in a concrete enclosure of sufficient area and height to accommodate the liquid capacity of said tanks, the tops of tanks are located approximately 6 ft. above ground level; and

WHEREAS, appellant contends that, due to the nature of the soil and the height of the water table, it would be a hardship to comply with the order of the fire commissioner. Cal. No. 431-25-A. June 8th, 1925.

PREMISES: 218th to 220th Street & Harlem River, Manhattan.

REPORT OF COMMITTEE:

A committee of the Board consisting of Chairman Walsh, Fire Chief Kenlon, Messrs. Holland and Connell visited the above premises on June 8th, 1925.

The appeal is before the Board on an order of the Fire Commissioner requiring the burial of oil storage tanks. The appellant seeks relief from the entire burial of the tanks for the reasons that the ground is on the banks of the Harlem River and if compelled to bury same they would be below tide level. The property is now occupied with temporary wooden shacks and one story frame structures set on discarded scows.

The entire west side of 9th Avenue (north of the 3rd Avenue car barns on 217th Street) is vacant, so there is no improvement that would be in any way impaired or adversely affected by any means or hazard.

The plans before us on this appeal, propose the installation of twelve steel tanks, installed horizontally; the natural grade is approximately six feet above tide water.

The committee recommends that the proposed installation be separated into batteries of not more than three tanks to each battery and that the tanks be set approximately half-way (diameter) below grade and that the enclosure walls shall be built of reinforced concrete, carried to the top of the tanks and all enclosures and tanks to be filled and covered over with earth; the fill to extend not less than three feet above the top of the tanks, and that a reinforced concrete wall shall be

erected outside the tank installation enclosure; these outside enclosure walls to be not less than 10 ft. high, the earth fill to be sloped from the top to the inside of the exterior enclosure walls at bottom; the tanks so installed to be equipped in accordance with the rules of the Fire Department and the ordinances in all other respects; a yard hydrant with anti-freezing valves and siamese connection to be provided at the end of the dock, connected to and supplied from approved pumps hooked up to the city water mains, and that a revolving water line nozzle shall be provided, one to each battery enclosure of three (3) tanks, and that an approved liquid fire-fighting medium shall be provided and maintained operative from an independent pump house, the pump house to be isolated from the tank enclosure and to be constructed fireproof. It is further recommended that the sub-dividing wall between each battery of tanks shall be carried up at least 6 ft. above the top of the earth fill of the tank, the ends of these walls to be returned on a rack of 45 degrees at opposite ends and that a return of the drawings shall be made to this Board for approval, in compliance with the foregoing report.

(Signed) WILLIAM E. WALSH,
JOHN KENLON,
HENRY L. CONNELL,
JAMES P. HOLLAND.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted on condition* that the equipment shall be installed in accordance with the recommendations of the report of the committee of inspection; and that return drawings shall be made to this board in accordance with such report for approval before submitting same to the fire department for consideration. The necessary permits required by law to be obtained and work executed to completion without suspension or unnecessary delay.

339-25-A.

APPELLANT—Joseph L. Burke, for Atlantic Gulf & Pacific Company, owner.

SUBJECT—Appeal from decision of fire commissioner.

PREMISES AFFECTED—West side of Kemble avenue, 1,352 ft. 3½ in. south of Mill Basin, Brooklyn.

APPEARANCES—

For Appellant: Benjamin Ascher.

For Administration: Inspector Carroll of fire department.

ACTION OF BOARD—Report of committee adopted and appeal granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE TO ADOPT REPORT OF COMMITTEE AND GRANT APPEAL—

Affirmative: Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison and Connell 5
Negative 0
Not voting: Fire Chief Kenlon 1
Absent: Mr. Holland 1

THE RESOLUTION:

(339-25-A)

WHEREAS, Joseph L. Burke, for Atlantic Gulf & Pacific Company, owner, filed, March 28, 1925, an appeal, with the board of appeals, from a decision of the fire commissioner, affecting premises west side of Kemble avenue, 1,352 ft. 3½ in. south of Mill Basin, Brooklyn; and

WHEREAS, the decision of the fire commissioner, rendered March 25, 1925, in acting on N. B. Application No. 527-25, reads:

"1. All tanks must be buried 2 ft. 0 in. below grade and encased in 12 in. of stone concrete.";

and
WHEREAS, the premises consist of a plot of ground having a frontage of 200 ft. on Mill Basin, a frontage of 95 ft. on Kemble avenue and a depth of 520 ft., upon which is located the plant of the Sinclair Refining Co., consisting

MINUTES

of three 50,000 gallon and four 25,000 gallon tanks of gasoline; one 25,000 gallon tank for heating oil, one 25,000 gallon tank for kerosene and six 15,000 gallon tanks for miscellaneous storage; the tanks are built on piles; the bottom of the tanks being located at grade; and also three 4,200 gallon gravity filling tanks, and pump and motor room and other buildings necessary for the handling of the oils; and

WHEREAS, appellant contends that it will be impossible to bury the tanks for the reason that the ground is at tidewater level and that the cost of the pumping incidental to the extensive excavation would make the project commercially prohibitive, and proposes to construct a dike, of sufficient capacity, around all storage tanks.

Cal. No. 339-25-A.

June 1st 1925.

PREMISES: W. S. Kemble Ave., 1352 ft. 3½ in.
So. of Mill Basin, Brooklyn.

REPORT OF COMMITTEE:

On June 1st, a Committee of the Board, consisting of Chairman Walsh, Fire Chief Kenlon, Messrs. Holland and Connell visited the premises under appeal, from an order of the Fire Commissioner, as to the burial of proposed oil tanks.

The property designated in the appeal, running from Kemble Avenue to Mill Basin, immediately abuts the premises of the Gulf Refining Company, which was reviewed and granted by the Board under Cal. No. 16-20-A; the entire plot is cinder filled and the grade level is approximately 4 or 5 ft. above high water; the adjoining property to the west is a ship yard, neither very extensive nor particularly active at this time; the next nearest structure is the National Lead Works plant which is located 1300 or 1400 ft. in a northerly direction, being reinforced concrete structures.

The Committee recommends the favorable consideration of this oil storage plant on condition that all tanks of 50,000 gallon capacity, maintained for gasoline storage, shall be separately enclosed in reinforced concrete walls, with a reservoir of sufficient capacity to contain at least one and one-half times the contents of the tank and in no instance shall the storage of any tank or battery of tanks for the storage of gasoline exceed 50,000 gallons unless enclosed separately; that all tanks shall be separately equipped and provided with recognized liquid fire extinguishing mediums, and that each tank shall be equipped at the top with perforated metal aprons or scuppers and revolving distributing nozzle; the valve and pump house and fire extinguishing agencies to be located at the front of the property directly on the public highway and that necessary and sufficient frost proof hydrants shall be connected to the City water mains, running from the string piece or bulkhead to the public highway on Kemble Avenue. A return of the proposed mechanical and structural layout shall be submitted to this Board for consideration and approval in accordance with the foregoing recommendations.

(Signed) WILLIAM E. WALSH,
JAMES P. HOLLAND,
JOHN KENLON (not voting).
HENRY L. CONNELL.

In my opinion this report provides all necessary safeguards.

JOHN KENLON.

Resolved, that the decision of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted on condition* that the proposed plant shall be equipped and the oil storage tanks installed in accordance with the conditions imposed in the report of the committee of inspection; and that a return drawing of plant in accordance with committee's report shall be made to this board for approval before submitting same to the fire department for consideration.

489-23-A.

APPELLANT—John Wanamaker Co., owner.

SUBJECT—Application for extension of time—appeal from decision of fire commissioner.

THE RESOLUTION:

(489-23-A)

WHEREAS, John Wanamaker Co. filed, April 20, 1923 an appeal, with the board of appeals, from a decision of the fire commissioner, affecting premises 772-786 Broadway, 71-91 East 9th street, 60-70 East 10th street and 60-72 Fourth avenue, Manhattan; and

WHEREAS, the decision of the fire commissioner reads "The use of a fuel oil burning equipment may not be permitted in a building of hazardous occupancy."

and

WHEREAS, the building is fireproof, six stories in height 301 ft. 6 in. by 334 ft. 9 in., irregular in area; OCCUPIED as a department store; and

WHEREAS, pending the action of the board of appeals on the case, the appellant requests permission to operate his plant for a period of 90 days at his own risk; and

WHEREAS, this appeal was granted by the board at its meeting May 13, 1923, October 23, 1923, December 11, 1923, April 29, 1924, and September 19, 1924, for a temporary period of 90 days and appellant requested an extension of this permit and has requested a permanent permit, the only question now involved being as to the hazardous occupancy.

Resolved, that the decision of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted on condition* that the fuel oil equipment complies with the fuel oil rules of the board of standards and appeals in all other respects.

THE RESOLUTION:

(60-25-BZ)

WHEREAS, Edward Hoffman, for Benenson Realty Company, owner, filed, January 15, 1925, an application, under the building zone resolution, to permit in a business district the erection and maintenance of a garage for the storage of more than five motor vehicles; premises 2115-2137 Webster avenue, Bronx; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its regular meeting, June 9, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Webster avenue and Folin street are business districts and Tiebout avenue is a residence district; and

WHEREAS, the decision of the superintendent of buildings, rendered January 5, 1925, in acting on N. B. Application No. 3148-24, reads:

"1. Erection of proposed garage for storage of more than 5 motor vehicles in business district is contrary to provisions of the Building Zone Resolution.";

and

WHEREAS, the proposed building is to be of fireproof construction, two stories in height, with a frontage of 200 ft. and a depth of 100 ft.; to be occupied as a garage for the storage of more than five motor vehicles; and

WHEREAS, there was no opposition to the granting of this application on the part of adjoining property owners and there is a letter on file from the bureau of buildings supporting the basis of appeal under section 7 E of the building zone resolution.

Resolved, that the board of appeals does hereby *make a variation* in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is *granted on condition* that the building shall be erected fireproof, not to exceed two (2) stories in height above grade; that the roof shall be of flat design and construction; the first story of the building to be not more than 50 ft. deep and the second story 100 ft. in depth; the rear and gable walls shall be unpierced throughout their entire height and length, other than two exits on open court within the property of the premises; that the skylights installed shall not be within 20 ft. of the gable wall, to be glazed with plain glass, equipped with wire guards above and below; the front elevation shall be finished in face brick with architectural terra cotta and stone trimmings of panel design, no roof signs to be erected or maintained, and that there shall be no advertising display on the front of the building other than one electric sign indicating the title of the garage;

Resolved, further, all permits necessary for the prosecution of the work shall be obtained within nine (9) months and the building completed within eighteen (18) months from the date of this action.

THE RESOLUTION:

(344-25-BZ)

WHEREAS, William F. Doyle, for Central Zone Corp., owner, filed, March 30, 1925, an application, under the building zone resolution, to permit in a two (2) times height district the erection of the street walls of the building to a height exceeding the limit set by the zone resolution; premises 15-19 East 33rd street and 18-22 East 34th street, Manhattan; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its regular meeting, June 9, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the height district maps accompanying the building zone resolution show that East 33rd street and East 34th street are two times height districts; and

WHEREAS, the decision of the superintendent of buildings, rendered March 27, 1925, in acting on N. B. Application No. 177-25, reads:

"1. Proposed height is unlawful—Art. III, Building Zone Resolution.";

and

WHEREAS, the proposed building is to be of fireproof construction, 20 stories in height, with a frontage of 80 ft. on East 33rd street and 75 ft. on East 34th street and a depth of 197.5 ft.; to be occupied for offices, stores and showroom, the permitted height of the street wall on East 33rd street is 130 ft., on East 34th street 200 ft.; it is proposed to erect the street wall on East 33rd street to a height of 200 ft.; and

WHEREAS, the board deemed that the additional height allowance permitted by the rules of exception of the zoning resolution, namely, 130 ft., justified a reasonable adjustment with respect to the height of adjoining structure affecting the 33rd street front only.

Resolved, that the board of appeals does hereby make a variation in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is granted on condition that the street wall of the 33rd street front of the building shall not exceed a height of 150 ft. and that the height and set back requirements of the building zone resolution otherwise shall be complied with in all respects;

Resolved, further, all permits necessary for the prosecution of the work shall be obtained within nine (9) months and the building completed within eighteen (18) months from the date of this action.

1149-24-BZ.

APPLICANT—Walter B. Wills, for Herman W. Bruning, owner.

SUBJECT—Application for reopening (re: decision of superintendent of buildings) to permit in a residence district the alteration and conversion of occupancy from a stable to a garage for the storage of more than five (5) motor vehicles.

PREMISES AFFECTED—63-63½ Schaeffer street Brooklyn.

Absent: Fire Chief Kenlon

THE RESOLUTION:

(1149-24-BZ)

WHEREAS, Walter B. Wills, for Herman W. Bruning, owner, filed, September 19, 1924, an application, under the building zone resolution, to permit in a residence district the alteration and conversion of occupancy of a stable to a garage for the storage of more than five motor vehicles; premises 63-63½ Schaeffer street, Brooklyn; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its special meeting, April 28, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Schaeffer street is a residence district and Bushwick avenue and Evergreen avenue are business districts; and

WHEREAS, the decision of the superintendent of buildings, rendered June 11, 1924, in acting on Alteration Application No. 2563-24, reads:

"Proposed alteration of the two buildings used at present as stables, to two one-story brick garages to be occupied by three cars each, a use not accessory to the dwelling located on the front of the lot in a resident district, is contrary to Art. 2, Sect. 6, of the Zone Resolution.";

WHEREAS, the existing buildings consist of a one-story frame structure and a two-story brick structure used as stables; having a total area of 50 ft. by 18 ft., located at the rear lot line of the plot. It is proposed to alter these two buildings to a one-story non-fireproof garage 50 ft. by 18 ft. in area for the storage of more than five motor vehicles; and

WHEREAS, the applicant filed 80 per cent consents of adjoining property owners, and the board deems the proposed alteration would be an improvement over the existing use and occupancy; and

WHEREAS, this application was granted by the board on certain statements as to size of building, and it appears the depth is 20 ft. instead of 18 ft.

Resolved, that the board of appeals does hereby make a variation in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is granted, on the basis of section 7-G, for a temporary period of two (2) years, restricting the structure to a depth of 20 ft. and a width of 50 ft., to be located on the rear of the premises, for the storage of six (6) automobiles of the pleasure car type, space for four (4) of which may be rented to persons not residing on the premises; that the rear and gable walls shall be unpierced throughout their entire height and length; there shall be no gasoline equipment installed and no signs of any nature displayed on premises;

Resolved, further, that all permits necessary for the prosecution of the work shall be obtained within six (6) months and the building completed within eighteen (18) months from the date of this action.

THE RESOLUTION:

(76-24-BZ)

WHEREAS, William F. Doyle, for Efficient Building Corporation, owner, filed, January 18, 1924, an application, for the building zone resolution, to permit partly in a residence district and partly in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles; northeast corner of Jerome avenue and Clifford place, The Bronx; and

WHEREAS, a public hearing was held on this application before the board of appeals, at its regular meeting, June 10, 1924, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Jerome avenue is a business district and Clifford place is a residence district; and

WHEREAS, the decision of the superintendent of buildings, rendered December 27, 1923, in acting on N. B. App. No. 76-23, reads:

"Erection of proposed garage for storage of more than five motor vehicles in business and residence district is contrary to provisions of Building Zone Resolution."

WHEREAS, the proposed building is to be of non-fireproof construction, two stories in height, with a frontage of 110 feet and a depth of 100 ft; to be occupied as a garage for more than five motor vehicles; and

WHEREAS, a committee of the board visited the premises and reports:

Cal. No. 76-24-BZ. June 7, 1924.

Premises—N. E. Corner of Jerome Avenue & Clifford Place, The Bronx.

REPORT TO THE BOARD OF APPEALS:

A Committee of the Board, consisting of Chairman Walsh, Fire Chief Kenlon, Messrs. Kerby, Connell and Holland, visited this site to personally observe the premises and surrounding properties and consider the environs, because of the confliction of testimony given at the hearing held on May 20, 1924.

This application is for the consideration of a building group, including dwellings in the residence district, stores in the business district, and a public garage intervening between the aforesaid uses.

The property under consideration is at the northeast corner formed by the intersection of Clifford Place and Jerome Avenue; the opposite, or west side of Jerome Avenue, being intersected for a distance of three blocks north from Featherbed Lane. On the southeast corner of Clifford Place and Jerome Avenue, there is in operation a wet wash laundry, with all the objectionable features attendant thereto and incidental to the conduct of a business of this nature, which includes

constant coming and going of delivery wagons and receipt and delivery of goods.

The applicant proposes, in the development of his property, extending from Jerome Avenue east to Townsend Avenue, to confine himself to the use district regulations on the Jerome Avenue front by development with stores or shops, and on the Townsend Avenue side with two family dwellings, and in the intervening space of possibly eighty feet he seeks to maintain a public garage, directly opposite the existing wet wash laundry. The only private dwellings in the vicinity are located on the street to the east (Townsend Avenue), which is the natural line of travel for pedestrian use to the nearest railroad stations.

It therefore appears to the Committee that the interests of the community would not be infringed or impaired by the erection of this proposed garage, as the only one affected would be the owner of this group development immediately in the rear of the proposed garage.

The Committee recommends the granting of the garage use variation, contingent on the development of the property as a whole, a plot 100 feet by 200 feet in area, as indicated on plans filed in this application, with business structures on Jerome Avenue separated from the proposed garage by unpierced walls, the dwellings proposed on Townsend Avenue to be constructed in conjunction with and at the same time as the garage, the dwellings and business structures to be enclosed and roofed over before a certificate of occupancy is issued by the superintendent of buildings for the garage structure.

(Signed) WILLIAM E. WALSH,
JOHN KENLON,
JAMES P. HOLLAND,
JOHN C. KERBY,
HENRY L. CONNELL.

WHEREAS, this application was granted by the board at its meeting June 10, 1924, on certain conditions, and the owner, through Lewis V. Bates, lessee, requests a modification of these conditions as to use of corner store.

Resolved, that the board of appeals does hereby make a variation in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is granted on condition that the entire property, 100 ft. by 200 ft., embraced in this appeal before the board, be developed as indicated on the plan and built, as a whole, in conjunction with the proposed garage; that the Jerome avenue front be developed as and restricted to business use for shops or stores, separated from the garage by an unpierced wall, except the corner store used and operated in conjunction with the garage for automobile accessories and offices, which may have a single communicating opening not more than 3 ft. by 6 ft. 6 in. in area, equipped with a self-closing fireproof door; that the development for a distance of 90 feet from, and for a frontage of 100 ft. on, Townsend avenue, shall be improved as dwellings; that the business use and dwelling development shall be enclosed and roofed over before a certificate of occupancy shall be issued for the garage structure; that the rear and gable walls of the garage portion shall be unpierced throughout the entire height and length; that the front elevation on Clifford place be finished with face brick and architectural terra cotta or stone trimmings;

Resolved, further, that all permits necessary for the prosecution of the work shall be obtained within nine months and the entire development completed within eighteen months from the date of this action.

"1. Erection of proposed building for business uses in residence and business district is contrary to provisions of Building Zone Resolution."

and

WHEREAS, the proposed building is to be of non-fireproof construction, six stories in height, with a frontage of 100 ft. and a depth of 120 ft.; to be occupied as stores and offices; and

WHEREAS, the board deemed that, owing to the extensive business use throughout the street, there would be hardship in preventing applicant from making a similar use of his premises; and

WHEREAS, this application was granted by the board at its meeting February 10, 1925, on certain conditions, and

applicant requested a modification of the conditions as to the height and use of upper portion of building.

Resolved, that the board of appeals does hereby make a variation in the application of the use district regulations of the building zone resolution and that the application be and it hereby is granted on condition that the structure shall not exceed a six-story building above grade, subdivided as described and laid out on the plans filed in this appeal; that the business use of the 1st floor shall be restricted to stores or shops for conduct of retail business; and no manufacturing shall be permitted on any part of the premises; that any signs or advertising displayed on the premises shall be restricted to the show windows of the stores; that no roof signs shall be permitted; that the front of the building, other than the show windows, shall be finished in face brick or natural stone; that the architect shall make a return of his drawings for approval of the elevation by this board before filing same with the superintendent of buildings, and that the remaining portion of any structure erected on these premises shall be restricted to conforming uses under the building zone resolution;

Resolved, further, that all necessary permits be obtained within nine months and building completed within eighteen months from the date of this action.

AREA FIXED.

(389-25-BZ)

The chairman presented and read a communication from William F. Doyle, requesting the board to fix the area of notification deemed affected by erection and maintenance of a garage; premises 136-140 Hall street, Brooklyn.

The following area was approved by the board:

"Both sides of Hall street from a point 100 ft. south of Myrtle avenue to a point 400 ft. north of proposed garage; the north side of Myrtle avenue from Hall street to Washington avenue and the east side of Washington avenue from Myrtle avenue to a point 200 ft. northerly therefrom.

BOARD OF APPEALS

SPECIAL MEETING.

TUESDAY AFTERNOON, JUNE 9, 1925, 2 P. M.

Present: Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison, Connell, Holland and Fire Chief Kenlon.

APPEALS FROM ADMINISTRATIVE ORDERS.
588-23-A.

APPELLANT—Tottenville Copper Co., Inc., owner.
SUBJECT—Appeal from order of fire commissioner.
PREMISES AFFECTED—East side of Church street, 200 ft. north of Railroad avenue, Tottenville, Richmond.

APPEARANCES—

For Appellant: None.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Laid over to June 23, 1925, at 2 p. m., on written request.

589-24-A.

APPELLANT—Corona Chemical Co., Inc., lessee.
SUBJECT—Appeal from order of fire commissioner.
PREMISES AFFECTED—43-45 Wooster street, Manhattan.

APPEARANCES—

For Appellant: None.

For Administration: Inspector Lynch of fire department.

ACTION OF BOARD—Appeal dismissed for lack of prosecution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison, Holland, Connell and Fire Chief Kenlon 7

Negative 0

Absent 0

THE RESOLUTION:

(589-24-A)

WHEREAS, Corona Chemical Co., Inc., lessees, filed, April 25, 1924, an appeal, with the board of appeals, from an order of the fire commissioner, affecting premises 43-45 Wooster street, Manhattan; and

WHEREAS, the order of the fire commissioner, No. 21266-LC, dated November 22, 1923, reads:

"Section 272-G, Chapter 10, Code of Ordinances, prohibits the issuance of a permit for a wholesale drug

MINUTES

store or chemical supply house in a building having a factory or workshop where the applicant's business is not separated from the rest of the building by fireproof walls and floors.

"You are therefore, hereby, ordered to:

"1. Discontinue the maintenance of a wholesale drug store or chemical supply house in this building.";

nd

WHEREAS, the building is non-fireproof, six stories in height, 50 ft. by 94 ft. in area; OCCUPIED, tenant factory, appellant occupying the 4th and 5th stories as a chemical supply house, 63 persons above the 1st story; and

WHEREAS, appellant contends that the stairways and stairway enclosures are fireproof and that the building is amply provided with exits; and

WHEREAS, no one appeared when this case was called.

Resolved, that the appeal be and it hereby is *dismissed* or lack of prosecution.

88-24-A.

APPELLANT—Nathaniel Seaman, for Olivett Distributing Co., lessee.

SUBJECT—Appeal from order of fire commissioner.

PREMISES AFFECTED—250 Hudson street, Manhattan.

APPEARANCES—

For Appellant: Alfred E. Smith, Jr.

For Administration: Inspector Lynch of fire department.

ACTION OF BOARD—Appeal granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison, Holland, Connell and Fire Chief Kenlon	7
Negative	0
Absent	0

THE RESOLUTION:

(588-24-A)

WHEREAS, Nathaniel Seaman, for Olivett Distributing Co., lessee, filed, April 25, 1924, an appeal, with the board of appeals, from an order of the fire commissioner, affecting premises 250 Hudson street, Manhattan; and

WHEREAS, the order of the fire commissioner, No. 23459-C, dated March 20, 1924, reads:

"1. Provide a separate and distinct system of *Automatic Sprinklers* throughout the building * * *";

and

WHEREAS, the building is fireproof, six stories in height, 40 ft. by 73 ft. in area; OCCUPIED for the denaturing of alcohol; the maximum amount of alcohol on the premises being 300 (50 gallon) barrels; 10 persons above the 1st story; and

WHEREAS, appellant contends that there is no open flame on the premises; that the boiler room is enclosed by brick walls, with fireproof door at opening; and that the means of egress are adequate.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted*, for a temporary period, holding the order in abeyance, subject to discontinuance of the present use and occupancy on or before December 31, 1925, *on condition* that the quantity of alcohol stored on the premises shall not exceed 90 barrels; and *granted* only so long as building is under constant surveillance by official representative of the Federal Government night and day; and that watchman patrol shall be maintained in the building.

BUILDING ZONE CASES.

1057-24-BZ.

APPLICANT—James J. Walker, for William A. Corcoran, owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit, partly in a residence district and partly in a business district and also within

"B" area district, the erection and maintenance of a garage for the storage of more than five (5) motor vehicles and also the omission of rear yard required by zone resolution.

PREMISES AFFECTED—Northwest corner 182nd street and Folin street, The Bronx.

APPEARANCES—

For Applicant: None.

For Opposition: Several objectors.

ACTION OF BOARD—Laid over to June 23, 1925, at 2 p. m., to permit applicant to be present.

378-24-BZ.

APPLICANT—John J. Dunnigan, for Hesn Realty Co., Inc., owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles.

PREMISES AFFECTED—1101-1109 Union avenue, The Bronx.

APPEARANCES—

For Applicant: John J. Dunnigan.

For Opposition: Arthur G. Basch.

ACTION OF BOARD—Laid over to June 14, 1925, at 10 a. m., on request of objector's representative.

811-24-BZ.

APPLICANT—John J. Dunnigan, for Hattie W. Ayer, owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles.

PREMISES AFFECTED—495-499 East 171st street, The Bronx.

APPEARANCES—

For Applicant: John J. Dunnigan.

For Opposition: Jacob Feld.

ACTION OF BOARD—Application withdrawn.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison, Holland, Connell and Fire Chief Kenlon	7
Negative	0
Absent	0

191-25-BZ.

APPLICANT—James W. Byrnes, for Bernard Kiritz, owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a residence and "C" area district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles, also the omission of a rear yard required by the building zone resolution.

PREMISES AFFECTED—1209-1211 Putnam avenue, Brooklyn.

APPEARANCES—

For Applicant: James W. Byrnes.

For Opposition: None.

ACTION OF BOARD—Application denied.

THE RESOLUTION:

(191-25-BZ)

WHEREAS, James W. Byrnes, for Bernard Kiritz, owner, filed, February 17, 1925, an application, under the building zone resolution, to permit in a residence and "C" area dis-

MINUTES

trict the erection and maintenance of a garage for the storage of more than five motor vehicles, also the omission of a rear yard required by the zone resolution; premises 1209-1211 Putnam avenue, Brooklyn; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its special meeting, June 9, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Putnam avenue is a residence and "C" area district and Madison street and Evergreen avenue are business and "C" area districts; and

WHEREAS, the decision of the superintendent of buildings, rendered January 31, 1925, in acting on Application No. 1259-25, reads:

"Proposition contrary to the Zone Resolution, Art. II, Sec. 3. A public garage for more than five motor vehicles in a residential district. Also contrary to Art. II, Sec. 16, of the Zone Resolution. Rear yards not provided.";

and

WHEREAS, the proposed building is to be of non-fireproof construction, one story in height, with a frontage of 20 ft. and a depth of 100 ft.; to be occupied as a garage for the storage of more than five motor vehicles; and

WHEREAS, appellant failed to substantiate the basis of his appeal under hardship; no facts offered or testimony adduced to warrant the prohibitive use.

Resolved, that the decision of the superintendent of buildings be and it hereby is affirmed, and the application be and it hereby is denied.

237-25-BZ.

APPLICANT—William F. Doyle, for Bee De Realty Co., owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a business district extending from an unrestricted district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles.

PREMISES AFFECTED—38-44 State street, Brooklyn.

APPEARANCES—

For Applicant: William F. Doyle.

For Opposition: Sarah Stephenson, James F. Deegan and Susan G. Harkins.

ACTION OF BOARD—Application granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE TO GRANT—

Affirmative: Chairman Walsh, Messrs. Kennedy, Gunnison, Connell, Holland and Fire Chief Kenlon	6
Negative: Mr. Dowd	1
Absent	0

THE RESOLUTION:

(237-25-BZ)

WHEREAS, William F. Doyle, for Bee Dee Realty Co., owner, filed, February 26, 1925, an application, under the building zone resolution, to permit partly in a business district and partly in an unrestricted district the change of occupancy of a building formerly used as a railroad power plant, to a garage for the storage of more than five motor vehicles; premises 38-44 State street, Brooklyn; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its special meeting, June 9, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that State street is a business district to a point 100 ft. east of Columbia place and unrestricted district westerly therefrom; Atlantic avenue is an unrestricted district and Hicks street is a business district; and

WHEREAS, the decision of the superintendent of buildings, rendered February 25, 1925, in acting on Alt. App. No. 6482-25, reads:

"1. Proposed alteration is contrary to Zone Resolution, Art. 2, Section 6 (building changed to a use not permitted in a business district by above article). proposition therefore is denied."

and

WHEREAS, approximately 27 ft. of the rear of the premises is in the unrestricted district, the remainder being in the business district. It is proposed to convert the existing non-fireproof building, one story and cellar in height, having a frontage of 88.8 ft. and a depth of 127 ft. 6 in., formerly used as a railroad power plant, into a public garage for the storage of more than five motor vehicles; and

WHEREAS, it has been conceded that a prohibitive use exists and did exist prior to 1916 and almost continuously ever since.

Resolved, that the board of appeals does hereby make a variation in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is granted on condition that the building shall be restricted to its present height, area and dimensions; that the rear and gable walls shall be unpierced throughout their entire height and length, except for such existing windows, opening on a side court of these premises in the same ownership; that any gasoline storage equipment installed shall be located at the street front of the extreme westerly end of premises; that any skylights installed shall be equipped with wire guards, above and below, and glazed with plain glass; that there shall be no signs or advertising permitted on the front of building other than one projecting sign, indicating title of business; that the existing front elevation shall be given three coats of oil paint or finished with cement mortar stucco; and that all necessary permits shall be obtained within six months and any work involved completed within a year.

1272-24-BZ.

APPLICANT—John J. Dunnigan, for Hugo C. Cook, owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a business district the alteration and extension of a garage for the storage of more than five (5) motor vehicles.

PREMISES AFFECTED—2311 St. Raymond's avenue, The Bronx.

APPEARANCES—

For Applicant: John J. Dunnigan.

For Opposition: None.

ACTION OF BOARD—Application granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison, Holland, Connell and Fire Chief Kenlon	7
Negative	0

THE RESOLUTION:

(1272-24-BZ)

WHEREAS, John J. Dunnigan, for Hugo C. Cook, owner, filed, October 28, 1924, an application, under the building zone resolution, to permit in a business district the alteration and extension of a garage for the storage of more than five motor vehicles; premises 2311 St. Raymonds avenue, Borough of Bronx; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its special meeting, June 9, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that St. Raymonds avenue, Parker street and Glover street are business districts; and

WHEREAS, the decision of the superintendent of buildings, rendered October 21, 1924, reads:

"Your application for a certificate of occupancy for an extension to the public garage at 2311 St. Raymonds Avenue, Bronx, is hereby denied as the extension of a

MINUTES

public garage in a business district is contrary to the provisions of the Building Zone Resolution.”;

WHEREAS, the existing building is non-fireproof, one story height, 60 ft. by 20 ft. in area; OCCUPIED as a garage more than five motor vehicles; it is proposed to extend garage over the entire lot so as to be a one-story non-proof, 60 ft. by 95 ft. in area garage for the storage more than five motor vehicles; and

WHEREAS, there was no opposition to the granting of application on the part of adjoining property owners, the board deemed that the applicant had established basis of appeal as a reasonable adjustment.

Resolved, that the board of appeals does hereby make a variation in the application of the use district regulations of the building zone resolution, and that the application and it hereby is granted on condition that the building shall be restricted to a one-story structure; that the rear gable walls shall be unpierced throughout their entire height and length; that the roof shall be of flat design and construction; that the front elevation shall be finished in brick, with architectural terra cotta or stone trimmings, and design; that there shall be no advertising signs of any nature or description permitted on the structure, other than one projecting sign indicating the title of the garage; that any skylights installed shall be located along the center line of the structure, glazed with plain glass, equipped with wire guards above and below;

Resolved, further, all permits necessary for the prosecution of the work shall be obtained within nine (9) months and the building completed within eighteen (18) months from the date of this action.

1367-23-BZ.

APPLICANT—John J. Dunnigan, for B. R. Construction Co., owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a “B” area district the erection and maintenance of a building occupying more than 40 per cent of the rear yard area.

PREMISES AFFECTED—1211-1263 Boynton avenue, The Bronx.

APPEARANCES—

For Applicant: John J. Dunnigan.

For Opposition: None.

ACTION OF BOARD—Application granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Negative	0
Absent	0

THE RESOLUTION:

(1367-23-BZ)

WHEREAS, John J. Dunnigan, for B. R. Construction Co., owner, filed, November 23, 1923, an application, under the building zone resolution, to permit in a “B” area residence district, the erection and maintenance of a building, extending to the rear lot line and also occupying more than 40 per cent of the area of the rear yard; premises 1211-1263 Boynton avenue, The Bronx; and

WHEREAS, a public hearing was held on this application before the board of appeals, at its special meeting, June 9, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Boynton avenue and Elder avenue are residence districts and Westchester avenue is a business district and also “B” area district; and

WHEREAS, the decision of the superintendent of buildings, rendered November 16, 1923, in acting on N. B. App. No. 102-23, reads:

“1. Rear yards must be provided behind garages to comply with requirements of Building Zone Resolution in residence district.”;

and

WHEREAS, the proposed buildings are of non-fireproof construction, one story in height, with a frontage of 16 ft. 6 in. and a depth of 17 ft.; to be occupied as private garages, to be built at rear lot line instead of 10 ft. therefrom; and

WHEREAS, the board deemed that inasmuch as the applicant contends he will provide and maintain a rear yard in accordance with the zoning resolution requirements.

Resolved, that the board of appeals does hereby make a variation in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is granted in accordance with the recommendation of the board of estimate and apportionment as published under its calendar number 155 of June 5, 1925, and required permits to be obtained within sixty days.

190-24-BZ.

APPLICANT—Edward V. Dodd, for William F. Till, owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a residence district and partly in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles.

PREMISES AFFECTED—2513-2519 Tilden avenue, Brooklyn.

APPEARANCES—

THE RESOLUTION:

(190-24-BZ)

WHEREAS, William F. Doyle, for William F. Till, owner, filed, February 7, 1924, an application, under the building zone resolution, to permit partly in a business district the erection and maintenance of a garage for the storage of more than five motor vehicles; premises 2513-19 Tilden avenue, Brooklyn; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its regular meeting, September 30, 1924, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Tilden avenue and Prospect street are business districts and Lott street is a residence district; and

WHEREAS, the decision of the superintendent of buildings, rendered October 5, 1923, in acting on App. No. 14986-23, reads:

“A public garage for more than five motor vehicles partly in a residential and partly in a business district.”;

and WHEREAS, the proposed building is to be of non-fireproof construction, one story in height, with a frontage of 75 ft. 17/8 in. and a depth of 200 ft.; to be occupied as a garage for more than five motor vehicles; and

WHEREAS, this application was denied by the board at its meeting, September 30, 1924, and reopened by vote of the board; and

WHEREAS, the board deemed that the invasion of the street by further prohibited uses should not be permitted; and that the alleged new evidence submitted on the reopening of the case was not sufficiently material to warrant the variation requested.

MINUTES

Resolved, that the decision of the superintendent of buildings be and it hereby is *affirmed*, and the application be and it hereby is *denied*.

THE RESOLUTION:

(715-24-BZ)

WHEREAS, John J. Dunnigan, for Leo Solicito, owner, filed, May 21, 1925, an application, under the building zone resolution, to permit in a residence district the maintenance of a garage for the storage of four (4) pleasure motor vehicles; four (4) spaces rented to persons not residing on the premises; premises 811 East 224th street, Borough of Bronx; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its special meeting, June 9, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that East 224th street, East 225th street and Barnes avenue are residence districts; and

WHEREAS, the decision of the superintendent of building rendered May 15, 1924, in acting on N. B. Application No. 1560-1921, reads:

"Your request for a certificate of occupancy for a one-story building at above location for the storage of four motor vehicles rented by persons not residing on the premises is hereby denied as the location is within a residence district and such occupancy would be unlawful."

and

WHEREAS, the existing building is of non-fireproof construction, one story in height, with a frontage of 33 ft. 4 in. and a depth of 18 ft. 8 in.; occupied as a garage for four motor vehicles, four spaces rented to persons not residing on premises; and

WHEREAS, there was no opposition to the granting of this application on the part of the adjoining property owners, and the applicant filed more than 80 per cent consents.

Resolved, that the board of appeals does hereby make a variation in the application of the use district regulation of the building zone resolution, and that the application be and it hereby is *granted on condition* that the structure shall be restricted in height to a one-story building 18 ft. 8 in. deep by 33 ft. 4 in. frontage; that the rear and gable walls shall be unpierced throughout their entire height and length, that the use and capacity of the garage shall be limited to four (4) automobiles of the pleasure car type *granted on further condition* that there shall be no gasoline storage maintained on the premises and no signs of any nature or description;

Resolved, further, all permits necessary for the prosecution of the work shall be obtained within ninety (90) days from the date of this action.

MINUTES

*CORRECTION.

The minutes of the meeting of the board of appeals, held Tuesday morning, May 6, 1924, as they appeared in Bulletin No. 20, Vol. 9, are hereby corrected to read as follows:

THE RESOLUTION:

(293-24-A)

WHEREAS, Samuel Rosenblum, for Andrew D. Baird Holding Corp., owner, filed, February 25, 1924, an appeal, with the board of appeals, from orders of the fire commissioner, affecting premises 2-20 Keap street, Brooklyn; and

WHEREAS, the orders of the fire commissioner, dated January 8, 1924, read:

"No. 53135-F:

"1. Provide a separate and distinct system of automatic sprinklers throughout building having at least one source of water supply, arranged and equipped as provided in the rules for fire extinguishing appliances adopted by the Board of Standards and Appeals May 24, 1917, as amended May 2, 1918, and January 21, 1919, effective February 17, 1919."

"Order No. 53136-F:

"1. Install a standpipe system with risers 4 inches in diameter tested to withstand a pressure of 300 lbs. per square inch extending from cellar to roof, with

necessary check valves and 2½ inch regulation Fire Department outlets on each story (including basements, cellar and roofs) placed within main stairway enclosure. Each outlet to be provided with sufficient feet of 2½ inch standard hose attached thereto."

and

WHEREAS, the building is non-fireproof, one story in height, 227 ft. by 153 ft. (34,700 sq. ft.) in area; divided into two sections by a fore and aft brick wall with sliding kalameined doors at openings; OCCUPIED for the manufacture of hospital supplies; and

WHEREAS, appellant contends most of the manufactured products are made of metal, and proposes to install an additional fireproof door at each opening in the partition wall.

Resolved, that the orders of the fire commissioner be and they hereby are *modified*, and the appeal be and it hereby is *granted on condition* that the existing subdividing wall of approved masonry shall be maintained with not more than two openings, said openings to be protected with approved automatic fire doors; that the rear gable walls shall be maintained unpierced throughout their entire height and length; that the watchman service shall be installed with direct Central Office connection; that not less than six (6) 40-gallon water casks, painted red and marked "FIRE", equipped with six (6) buckets to each cask, shall be maintained in each section of structure, also one (1) 40-gallon portable fire-extinguisher maintained in each section; and *granted* so long as use, conduct and operation of business on premises remain substantially unchanged.

*Correction—Words "decision of the superintendent of buildings be and it hereby is" changed to "orders of fire commissioner be and they hereby are" in lines 34 and 35.

MINUTES

*CORRECTION.

The minutes of the meeting of the board of standards and appeals, held Tuesday afternoon, May 5, 1925, as they appeared in Bulletin No. 19, Vol. 10, are hereby corrected and read as follows:

THE RESOLUTION:

(1361-24-SA)

WHEREAS, The Caloroil Burner Corporation filed, November 18, 1924, a petition, with the board of standards and

**Correction—Words "Pump and Fan Set" added in line and words "and industrial" added in line 11.*

appeals, for approval of their device known as The Caloroil Burner, Pump and Fan Set, Type AA; and

WHEREAS, a committee of the board inspected this device in operation and recommends the approval of this device for use in domestic and industrial installations with either Grade A or Grade B Fuel Oil, when installed in conformity with the rules of the board of standards and appeals.

Resolved, that the device be and it hereby is *approved* for use in domestic and industrial installations with either Grade A or Grade B fuel oil, *on condition* that the fuel oil burning equipment be installed in conformity with the rules of the board of standards and appeals.

RULES

FIRE ESCAPE RULES

Fire Escape Rules of the Board of Standards and Appeals, adopted July 2, 1918, Cal. No. 1218-18-S; Amended Dec. 4, 1918; Cal. No. 1708-18-S; Amended May 9, 1924, Cal. No. 414-24-SR.

Rule 1. In any building erected prior to October 1, 1913, now occupied or to be occupied as a factory, more than five stories in height and not exceeding nine stories in height, nor in any case more than 90 ft. from curb level to top floor level, one of the required means of exit or escape under Section 271-1 of the Labor Law may consist of an outside fire escape, provided that:

(a) Any such fire escape hereafter erected shall comply with all the provisions of Section 273, labor law, and in addition thereto:

(1) The balconies and stairs shall be protected on the outside by substantial railings to a height of at least 4 ft. 6 in., measured from floor of balcony or center of stair tread, constructed of bars at least one-half ($\frac{1}{2}$) inch in diameter, spaced not more than six (6) inches on centers, or of substantial grill work, or of screening not less than No. 10 U. S. gauge wire with not more than one and one-half ($1\frac{1}{2}$) inch mesh, all rigidly braced;

(2) When there is safe egress from the roof of the building to any adjoining structure, the fire escape stairway shall continue to the roof, and if there be no safe means of egress, a gooseneck ladder shall be provided from the top story balcony to the roof.

(b) Any such fire escape erected prior to October 1, 1913, shall conform in every respect with the requirements of paragraph (a) of this rule, except that balconies may be not less than 3 feet in width; the connecting stairs not less than 20 inches in width, and placed at an angle not exceeding 60 degrees if the building is not over six stories in height, otherwise at an angle of 45 degrees; fire windows leading to balconies may be at window sill level if the steps not less than sixteen (16) inches wide are provided on the inside from floor level, leading thereto.

(c) Any such fire escape erected subsequent to October 1, 1913, and prior to these rules taking effect, unless previously accepted as one of the required means of exit or escape by the administrative official having jurisdiction, shall conform in every respect to paragraph (a) of this rule.

Rule 2. A fire escape shall not hereafter be accepted as constituting one of the required means of exit or escape under Section 271-1 of the Labor Law, in any building

erected prior to October 1, 1913, now occupied or to be occupied as a factory, exceeding nine stories in height, or more than 90 feet from curb level to top floor level.

Rule 3. When in addition to the required exits from any factory or factory building, there exist other means of egress which are not entirely in accordance with the requirements of the Labor Law and the Rules of the Board of Standards and Appeals, such means of egress may be retained under the following conditions:

(a) Fire Escapes.—All substandard fire escapes on factory buildings shall be removed or reconstructed in accordance with Section 274 of the Labor Law, except that in lieu of a counterbalanced stair a drop ladder in guides from the lowest balcony to ground may be provided. Substandard fire escapes shall not be considered as a basis for increased occupancy of the building. When such substandard fire escapes are located in any court or on the side or rear of a building, proper egress to a point of safety shall be provided, either to open adjoining yards, or the lowest balcony may be connected to an adjoining fire escape, exterior stairway, or to roof of adjoining extension, or other egress satisfactory to the Fire Commissioner. All such fire escapes shall be maintained structurally safe and properly painted.

(b) Interior Stairways.—All interior stairways not conforming to the requirements of the Labor Law or rules of the Board of Standards and Appeals may be retained, provided that egress to same is maintained unobstructed, halls are properly lighted, and all landings, passageways, etc., are maintained free and unobstructed. An easily operated panic bolt or other similar device may be installed at street exit door.

(c) Exterior Screened Stairways.—Exterior screened stairways not serving as a required means of egress shall be either removed or maintained structurally safe and properly painted, exits thereto and all platforms and passageways thereof shall be maintained unobstructed, and egress from termination shall be provided for sub-standard fire escapes in subdivision a.

(d) Horizontal Bridges.—Horizontal bridges and party wall balconies between buildings shall be removed or maintained structurally safe and properly painted, and access thereto and all passageways thereof shall be maintained unobstructed.

(e) No sign of any character shall be placed at openings leading to these sub-standard exits.

PUBLIC HEARING

PROPOSED AMENDMENTS TO RULES GOVERNING FIRE EXTINGUISHING APPLIANCES- SPRINKLER SYSTEMS.

[77-25-SR]

NOTICE IS HEREBY GIVEN that a public hearing will be held by the Board of Standards and Appeals on Friday, June 26, 1925, at 2 p. m., Room 1013, Municipal Building, on proposed amendments to Rules for Fire Extinguishing Appliances, Sprinkler Rules.

General Requirements. The rules contained herein cover the general details of a sprinkler equipment only. Before an equipment is installed or before a present equipment is remodeled, complete working plans should be submitted for approval to Fire Department.

These plans shall be drawn to an indicated scale; give correct address and points of compass; show sectional elevations of the building; and the essential features of the construction, viz., size, location and direction of joists, timbers or other structural members. They shall also indicate the location and size of water supplies, connecting pipes, feed mains and risers, gate, check, alarm and dry-pipe valves, as well as the location, spacing, number and type of sprinklers.

Upon approval of preliminary plans such number of sets of clean, corrected plans on cloth as the Fire Commissioner may require, not exceeding three (3), shall be filed for final approval of the Fire Commissioner. A certified copy of the approved plans shall be forwarded to the Bureau of Buildings by the Bureau of Fire Prevention. Such application and specification forms as may be prescribed by the Fire Commissioner shall accompany preliminary plans. If a standpipe (fire line) equipment is provided throughout the building, the plans shall include a note to that effect.

When entirely completed in accordance with the approved plans and as per test herein provided for, application shall be made to the Bureau of Fire Prevention for inspection of the completed installation. When the sprinkler equipment is approved the applicant will be so advised in writing by the Bureau of Fire Prevention.

All sprinkler equipments shall be installed in a thoroughly workmanlike manner.

Rule 1. Definition of Automatic Extinguisher Systems. Automatic extinguisher systems shall consist of a system of piping connected to one or more acceptable sources of water supply, or other extinguishing medium, provided with distributing devices so arranged and located as to discharge and diffuse automatically under the action of heat an effective stream or spray over every part of the interior of the building area in which a fire may start or to which it may be communicated.

Rule 2. Classification of Sprinkler Systems. For the purpose of these rules, sprinkler systems shall be classified as:

(a) Automatic Wet Pipe Systems, in which all pipes and sprinkler heads are at all times filled with water;

(b) Automatic Dry Pipe Systems, in which the pipes and sprinkler heads are filled with air, either compressed or at atmospheric pressure, and the water supply is operated by a Dry Pipe Valve as defined in Rule 27 of these Rules.

(c) Non-Automatic Systems, in which all pipes and sprinkler heads are maintained dry with a fire department connection for water supply.

Thermostatic fire alarm with direct connection to Central Office or Fire Department Headquarters shall be provided in connection with all non-automatic sprinkler systems.

Rules 3. Approved Devices. Automatic Sprinklers and accessory appliances shall include all devices approved as such by the Bureau of Standards, Washington, D. C.; by the Underwriters' Laboratories, Inc., of Chicago; by the Associated Factory Mutual Laboratories of Boston; and all devices which meet the tests prescribed by the Board of Standards and Appeals.

Rule 4. Water Supply. Approved sources of water supply shall be classified as Automatic and Auxiliary.

(a) Automatic Sources shall include the Gravity Tank, the Pressure Tank, [and] the Public Water System, and the Automatic Electric Fire Pump, installed as required under the provisions of Rule 8, hereinafter provided for.

(b) Auxiliary Sources shall include the non-automatic Fire Pump and the Fire Department Connection.

Rule 5. Gravity Tank. Gravity tanks shall contain an available quantity of water sufficient to supply twenty-five per cent (25%) of the number of sprinkler heads in the average protected fire area for twenty (20) minutes, but not less than 5,000 gallons; and the bottom of the tank shall have an elevation of not less than twenty (20) feet above the highest line of sprinklers below the main roof. Where the area of a pent house exceeds 2,500 sq. ft. the bottom of the tank shall be required to be not less than 20 feet above the highest line of sprinklers below the pent house roof, but where a pent house contains only pressure tanks this rule will not apply.

Where a tank capacity in excess of [25,000] 30,000 gallons is required by this rule, the amount of water to be provided in excess of [25,000] 30,000 gallons shall be specified by the Board of Standards and Appeals, except where tanks of unlimited capacities are supported on structures altogether independent of buildings.

The tank shall be filled through a fixed pipe, independent of the sprinkler piping, not less than two (2) inches in size, discharging into the top of the tank, or through a by-pass not less than two (2) inches in size around the check valve in the discharge pipe, provided the supply is of sufficient pressure to fill the tank. The water supply and connections shall be capable of supplying the tank at a rate of not less than sixty-five (65) gallons per minute.

The filling pipe shall be carried up inside a frost-proof casing and may extend through tank bottom to discharge at top of tank above full water level. The portion of pipe inside tank must be of brass or copper or other non-corrosive material.

Tanks shall not be fed through sprinkler lines.

The sprinkler and standpipe tanks may be fed from common source of supply, either a pump or a direct service main connection, provided that there are separate feed mains from the basement or lowest story and a control valve in each feed line in a pump or engine room.

The overflow pipe shall be not less than two (2) inches in diameter for tanks up to 30,000 gallons capacity and not less than three (3) inches in diameter for larger tanks. The top of the overflow pipe shall be three (3) inches below the top of the staves in wooden tanks and one (1) inch from the top in steel tanks. The pipe may extend through the bottom of tank provided the portion inside tank is of brass or copper or other non-corrosive metal and without joints or it may extend through side of tank. For tanks over roofs overflow pipes shall terminate not more than twenty-four (24) inches above roof and shall be fitted with a 90 degree elbow.

The discharge, heating or filling pipes where exposed to the weather shall be protected from freezing by a frost proof covering which may be of three layers of one-inch (1") hair felt interspersed with building paper well wrapped and secured and covered with canvas well painted or by frost-proof boxing as specified by the National Board of Fire Underwriters.

Easy access to top of each tank shall be provided by means of a steel gooseneck ladder substantially constructed and rigidly braced, the top of which shall not tip outward from the vertical at any point.

Tanks above roofs shall be constructed according to the requirements of the Building Code and supporting struc-

PUBLIC HEARING

Tanks shall be approved by the Superintendent of Buildings. Tanks not enclosed and exposed to the weather shall be covered with a double roof of acceptable construction consisting of a tight flat cover of matched boards and above this a conical roof which shall be covered with an approved roofing.

Where a gravity tank may supply both sprinklers and stand hydrants it shall not be of less than 30,000 gallons capacity and located on a structure altogether independent of buildings and the bottom shall not be less than 75 feet above the ground level, and not less than 20 feet above the highest line of sprinklers below the main roof of the highest building in a group of buildings.

Rule 6. Pressure Tank. Pressure tanks shall contain sufficient water to supply twelve and one-half per cent (12½%) of the number of sprinklers in the average protected fire area for twenty (20) minutes, but not less than [5,000] 3,000 gallons of water for a wet pipe system where supplemented by an auxiliary water supply, and not less than 5,000 gallons of water for a dry-pipe system. No single tank shall have a capacity greater than 9,000 gallons. The tank shall be kept two-thirds (2/3) full of water under a pressure of seventy-five (75) pounds per square inch, and shall be so proportioned and located that a pressure of not less than fifteen (15) pounds per square inch will be available on the highest line of sprinklers below the main roof when all the water has been discharged from the tank.

[The tank shall be placed either on the roof or in the highest sprinklered story.]

A pressure tank or tanks shall not be located below the highest line of sprinklers supplied by tank or tanks.

Where [a tank] the total capacity of the pressure tank supply is in excess of [25,000] 30,000 gallons as required by this rule, the amount of water to be provided in excess of [25,000] 30,000 gallons shall be specified by the Board of Standards and Appeals.

The water shall be supplied through a fixed pipe, independent of the sprinkler piping, not less than [two] one and one-half (1½) inches in size [with a one and one-quarter (1¼) inch connection to the tank], or through a by-pass not less than [two (2)] one and one-half (1½) inches in size around the check valve in the discharge pipe provided the supply is of sufficient pressure to fill the tank. The water supply and connections shall be capable of supplying the tank at a rate of not less than sixty-five (65) gallons per minute without reducing the pressure in the tank. The tank shall have a fixed metallic horizontal line on the end opposite the glass gauge, or other acceptable device, to indicate the level of the water when the tank is two-thirds full.

The air compressor shall be of sufficient capacity to increase the air pressure at the average rate of one (1) pound in two minutes in each pressure tank.

Rule 7. Public Water System. Direct connection to the city water supply shall be capable of furnishing water at not less than fifteen (15) pounds per square inch static pressure at the highest line of sprinklers under the main roof.

Subject to the requirements of the Department of Water Supply, Gas and Electricity, the size of each connection shall be as large as that of the main riser and not less than four (4) inches, and shall have a conveniently accessible control valve fixed to it at, or near, the curb, or, when possible, still further away from the building. The control valve shall be fitted with a frost and waterproof box, not less than four (4) feet nor more than six (6) feet below the curb, with a fixed stem extending to a compartment at the level of the sidewalk. The cover shall be bolted to the casing and shall be so marked as to be quickly located and to indicate the purpose of the valve. The valve shall be of indicating pattern, operated by a special socket wrench approved by the department of water supply, gas and electricity.

Where it is impractical to install a control valve box at the curb because of a vault under the sidewalk and within 18" thereof, the control valve may be located in the water supply connection at a point not more than two (2) feet from the point of entry into a vault.

Where a water meter is required in the water supply connection to an automatic sprinkler equipment, it shall be of a type which allows free flow of water and approved by the Department of Water Supply, Gas and Electricity, or a type of fire line meter which has been specifically approved by the Fire Commissioner for use in connection with fire extinguishing equipment.

Evidence establishing the fact that water supply conditions and pressures are as may be required shall be submitted to the Fire Department.

Rule 8. Fire Pump. An automatic electric fire pump as an automatic source of water supply is one approved for such use and controlled by an approved automatic controlling device, which shall be adjusted to maintain not less than 15 pounds water pressure at the highest sprinkler below main roof and in pent houses over 2,500 sq. ft., as provided in Rule 5. And shall receive water supply only from a direct connection to the city water main.

As auxiliary sources of water supply steam or electric standard fire pumps shall receive water supply from a suction tank, a direct connection to the city water main or other approved sources capable of supplying the pump at its rated capacity for sixty (60) minutes. The rated capacity of the pump shall be not less than five hundred (500) gallons per minute, and shall be sufficient to supply twenty-five per cent (25%) of the number of sprinklers in the average protected fire area.

The pump shall be located in a room of fireproof construction, properly ventilated, lighted and drained, enclosed in eight (8) inch brick or concrete walls with approved fire doors at openings and with fireproof floor and ceiling construction. If located in the lowest story of the building, the pump shall be placed on a foundation not less than one (1) foot in height. The pump room shall be readily accessible with safe egress for the attendant.

A reliable source of energy for driving the pump shall be provided. For steam pumps, provision shall be made for sufficient steam power to operate the pumps at full rated capacity, and a steam pressure of not less than fifty (50) pounds shall be maintained at the pump at all times. Where there is more than one boiler, the pipes and valves shall be so arranged to permit the cutting out of any one boiler without interrupting the steam supply to the pump from the other boilers. The boiler room shall be cut off from the remainder of the building by fireproof floor and wall construction with approved fire doors at all openings.

Electrical energy from a public service plant shall be acceptable as a source of energy for driving electric fire pumps. When local power plants supply the energy for operating electric pumps, two motor generator units shall be provided, or one generator unit supplemented by a public service break-down switch. Local electric power plants shall be located in rooms of fireproof construction with approved fire doors at openings.

Rule 9. Sprinkler Discharge. For the purpose of computing the capacity of water supplies, standard one-half (½) inch sprinkler heads shall be assumed to have an average discharge of twenty (20) gallons per minute, and the discharge of larger heads shall be computed proportionately in the ratio of the areas of their respective orifices.

Rule 10. Fire Area. A fire area is any floor space enclosed on all sides by exterior walls or fire walls or a combination of both. The number of sprinklers in the average protected fire area shall be determined by the number of sprinklered stories in such section. In

PUBLIC HEARING

determining the required capacity of water supplies, the number of sprinklers in the average protected fire area need not include those located in low positions, such as under benches, low shelves, closets and platforms and between cars in car barns.

Rule 11. Fire Department Connection. All automatic sprinkler systems shall be provided with at least one two-way Siamese connection on each street front of the building for connection to the fire department hose. Buildings fronting on only one street shall be provided with at least two Siamese connections when the street frontage of building exceeds [one hundred and fifty (150)] two hundred (200) feet [in width].

Where buildings have frontages on more than one street there shall be a fire department connection on each street front where frontage is not continuous but in all cases where more than one fire department connection is required they shall be located as the Fire Commissioner may direct and shall not be grouped.

All Siamese hose connections hereafter installed, except those on piers or warehouses intended for fire boat use, shall be three (3) inches in size. Fire boat connections shall be three and one-half (3½) inches in size. All hose connections shall be female, with standard fire department threads.

The inlets shall be placed at least eighteen (18) inches and not more than two (2) feet above the sidewalk, in a horizontal position accessible to the fire department, and shall be provided with a four (4) inch discharge connecting with a four (4) inch pipe to the sprinkler system for three (3) inch fire department connection and with a six (6) inch discharge outlet and six (6) inch pipe for three and one-half (3½) inch fire boat connection. Each inlet shall be provided with a clapper valve machined to a true face.

Each Siamese connection shall be designated by raised letters at least one (1) inch in size, cast in the fitting in a clear and prominent manner and reading for the service designated, viz.: "Base. Spkr.," etc., as the case may be. If the entire building is sprinklered, the fitting shall be marked "Auto. Spkr."

Siamese hose connections may project through a street wall not more than twelve (12) inches beyond the building line except that where there is an angle formed by the street wall and a check piece or the base of a column, pilaster or ornamental projection, they may be so located that no part extends more than fifteen (15) inches from either side of such angle in accordance with the provisions of the Building Code.

In each fire department connection there shall be an approved straightway check valve installed in a horizontal position, unless suitably designed for vertical position, and the piping shall be arranged to drain between the check valve and the outside siamese coupling by either a ball drip having a one-half (½) inch pipe connection and one-half (½) inch orifice and a bronze ball of proper size, or by a three-quarter (¾) inch drip connection, with plugged valve attached, and when necessary arranged to drain to a sewer. A drain connection may be tapped into the body of check valve only when located in a horizontal position.

Rule 12. Automatic Sprinkler Systems. Automatic sprinkler systems shall be classified as:

(a) One Source Systems, supplied with water from any one of the automatic sources; and

(b) Two Source Systems, supplied with water from a combination of any two of the automatic sources; two pressure tanks with a total water capacity twice that required for a one source supply; direct connection to the city water supply on two different streets, so located that the closing of the controlling valve on one main will not eliminate the main on the other street; or a direct connection to the city water supply and one of the auxiliary sources provided the water supply main is at least six (6) inches in size, the main is fed both

ways and a two (2) inch test pipe at the top of the sprinkler riser shows a flowing pressure of fifteen (15) pounds per square inch between the hours of six a. m. to six p. m.

A gravity tank and pressure tank, or a gravity tank and pressure tank and one of the automatic sources or two pressure tanks having a total water capacity for a one-source supply may be considered as a two-source supply where the occupancy of the building does not conflict with Rules 38, 39 and 40 hereinafter provided for.

Rule 13. Sprinkler Spacing. Sprinkler heads and lines shall be spaced as herein provided:

Mill Construction. Under mill ceiling (smooth solid plank and timber construction, 5 to 12 foot bays) one line of sprinklers shall be placed in the center of each bay and the distance between the heads on each line shall not exceed the following:

- (a) For Standard one-half (½) inch heads—
 - 8 feet in 12 foot bays;
 - 9 feet in 11 foot bays;
 - 10 feet in 10 foot bays;
 - 11 feet in 9 foot bays;
 - 12 feet in 5 to 8 foot bays;

- (b) For Conran* one (1) inch heads—
 - 20 feet in 5 to 12 foot bays.

- (c) For Conran* one and one-quarter (1¼) inch heads—
 - 25 feet in 5 to 12 foot bays.

- (d) Vaults used for the storage of nitro-cellulose products and vaults used for the storage of inflammable motion picture films shall have one standard one-half (½) inch head for each 62½ cubic feet of available storage space, or one (1) inch Conran* head for each 250 cubic feet of available storage space.

Measurements shall be taken from center to center of timbers.

Ceilings of modified mill construction having bays less than three (3) feet wide shall be treated as open joist construction and sprinkler heads and lines spaced accordingly.

Bay timbers spaced three (3) feet or more on centers, but less than five (5) feet on centers, will require special ruling by the administrative official having jurisdiction.

Joisted Construction. Under open finish joisted construction ceilings, floor, decks and roofs, the sprinkler lines shall be run at right angles to the joists and the heads "Staggered spaced" so that heads on one line will be opposite a point half way between heads on adjacent lines.

(a) For Standard one-half (½) inch heads the distance between lines of sprinklers shall not exceed ten (10) feet and the distance between heads on each line shall not exceed eight (8) feet, the end heads on alternate lines being spaced not more than two (2) feet from wall or partition. Permission may be given by the administrative official having jurisdiction to install but one line of sprinklers, in each bay where girders project below the under side of joists and divide the ceiling into bays ten (10) to eleven and one-half (11½) feet wide from center to center of girders, and the heads shall then be spaced on each line so that the area covered by a single head does not exceed eighty (80) square feet. In all cases where such bays are over eleven and one-half (11½) feet wide, two or more lines of sprinklers shall be installed in each bay as required by the rules for spacing

*Wherever the term "Conran head" is used in these Rules, it is to be taken as meaning either a Conran head of the type tested and approved by the Fire Department, or one that has passed similar tests by the Fire Department.

PUBLIC HEARING

Where girders and joists are flush at the bottom, heads shall be spaced according to the general rule.

(b) For Conran* one (1) inch heads the distance between adjacent lines shall not exceed twenty (20) feet and the distance between the heads on each line shall not exceed sixteen (16) feet, the end heads on alternate lines being spaced not more than four (4) feet from wall or partition. Where girders project below the under side of joists and divide the ceiling into bays not exceeding twenty (20) feet in width, measured from center to center of girders, one line shall be placed in the center of each bay. In bays exceeding twenty (20) feet in width at least two (2) lines shall be installed in each bay and in no case shall the distance between adjacent lines exceed twenty (20) feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads the distance between adjacent lines shall not exceed twenty-five (25) feet and the distance between the head on each line shall not exceed twenty (20) feet, the end head on alternate lines being spaced not more than five (5) feet from wall or partition. Where girders project below the under side of joists and divide the ceiling into bays not exceeding twenty-five (25) feet in width, measured from center to center of girders, one line shall be placed in the center of each bay. In bays exceeding twenty-five (25) feet in width at least two (2) lines shall be installed in each bay, and in no case shall the distance between adjacent lines exceed twenty-five (25) feet.

Smooth Finish, Sheathed or Plastered Ceilings. Under smooth finish, sheathed or plastered ceilings, in bays six (6) feet wide and over (measurements to be taken from center to center of timber, girder or other projection or support forming the bay), sprinkler heads and lines shall be spaced as follows:

(a) For standard one-half ($\frac{1}{2}$) inch heads—

One line of sprinklers shall be placed in the center of each bay for bays not exceeding twelve (12) feet in width, and the distance between the heads on each line shall not exceed the following:

- 8 feet in 12 foot bays;
- 9 feet in 11 foot bays;
- 10 feet in 6 to 10 foot bays.

Bays in excess of twelve (12) feet in width and less than twenty-three (23) feet in width, shall contain at least two (2) lines of sprinklers; bays twenty-three (23) feet in width or over shall have the lines therein not over ten (10) feet apart. In bays in excess of twelve (12) feet in width, not more than one hundred (100) square feet of ceiling area shall be allotted to any single head.

(b) For Conran* one (1) inch heads—

One line of sprinklers shall be placed in the center of each bay for bays not exceeding twenty (20) feet in width, and the distance between the heads on each line shall not exceed twenty (20) feet. Bays in excess of twenty (20) feet in width shall contain at least two (2) lines and in no case shall the distance between adjacent lines exceed twenty (20) feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads—

One line of sprinklers shall be placed in the center of each bay for bays not exceeding twenty-five (25) feet in width and the distance between the heads on each line shall not exceed twenty-five (25) feet. Bays in excess of twenty-five (25) feet in width shall contain at least two (2) lines and in no case shall the distance between adjacent lines exceed twenty-five (25) feet.

Fireproof Construction. The rules of slow-burning mill construction shall apply as far as practicable. The rule may be modified, however, the intent being to arrange the spacing of heads to protect the contents rather than the ceilings; but in no case shall the distance between a head on one line and a head on an adjacent line exceed the following:

(a) For standard one-half ($\frac{1}{2}$) inch heads, 12 feet.

(b) For Conran one (1) inch heads, 20 feet.

(c) For Conran one and one-quarter ($1\frac{1}{4}$) inch heads, 25 feet.

Distance From Walls. The distance from wall or partition to the first head on a sprinkler line shall not exceed one-half the allowable distance between the heads on such line. Additional heads may be required in the narrow pockets formed by bay timbers or beams and wall. Where beams, girders, columns, walls, partitions or other obstructions prevent the effective discharge of water, additional heads shall be installed to effectively sprinkle the area.

Vertical Shafts. In vertical shafts having inflammable sides, heads shall be provided within the shaft in addition to the head or heads at the tops of shafts, as follows:

(a) One standard one-half ($\frac{1}{2}$) inch head for each 200 square feet of inflammable surface.

(b) One Conran* one (1) inch head for each 400 square feet of inflammable surface.

(c) One Conran* one and one-quarter ($1\frac{1}{4}$) inch head for each 500 square feet of inflammable surface.

Such head or heads shall be installed at each floor when practicable, and always when shaft is trapped. Where practicable, heads shall be "staggered" at the alternate floor levels, particularly when only one head is installed at each floor level.

Pitched Roofs. Under a pitched roof sloping more steeply than one (1) foot in three (3) feet, heads shall be located in peak of roof, and those on either side of the peak shall be spaced according to the foregoing requirements. The distance between heads shall be measured on a line parallel with the roof. Where the roof meets the side wall or the floor line, the heads shall be placed not more than the following distance from such intersection:

(a) For standard one-half ($\frac{1}{2}$) inch heads, $3\frac{1}{2}$ feet.

(b) For Conran* one (1) inch heads, 7 feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, $8\frac{1}{2}$ feet.

Heads spaced not to exceed the following distance each way from the peak of roof, measured on a line parallel with the roof, may be used in lieu of heads located in peak of roof:

(a) For standard one-half ($\frac{1}{2}$) inch heads, $2\frac{1}{2}$ feet.

(b) For Conran* one (1) inch heads, 5 feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, $6\frac{1}{4}$ feet

In sawtooth roof construction, the end heads on the branch line shall be spaced not to exceed the following distance from the peak of the sawtooth:

(a) For standard one-half ($\frac{1}{2}$) inch heads, $2\frac{1}{2}$ feet.

(b) For Conran* one (1) inch heads, 5 feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, $6\frac{1}{4}$ feet.

Special Locations and Variations. In special locations, such as over electric generating, power and transforming apparatus, over their controlling devices and switchboards, where water from the fire extinguishing equipment would be detrimental, the sprinkler lines and heads may be omitted at the discretion of the administrative official having jurisdiction, and when in his judgment a slight variation of this rule of spacing is desirable to effect a more efficient distribution of water for fire extinguishing purposes, the sprinkler lines and heads shall be spaced as he may direct.

Rule 14. Sprinkler Position. All sprinkler heads shall be located, wherever possible, in an upright position on top of the pipes, except that sprinkler heads on automatic wet pipe systems may be pendant on concealed piping and when construction or occupancy of a room or enclosure makes it preferable.

(a) Where standard one-half ($\frac{1}{2}$) inch heads are installed sprinkler deflectors shall be parallel to ceilings, roofs or the

PUBLIC HEARING

incline of stairs, but when installed in the peak of a pitched roof they shall be horizontal. Distance of deflectors from ceilings of mill or other smooth construction, or bottom of joists of open joist construction, shall be not less than three (3) inches nor more than ten (10) inches.

In fireproof buildings, the distance between deflectors and panel ceilings shall not exceed fifteen (15) inches.

Not less than eighteen (18) inches effective clear space shall be left below the sprinkler heads, so that they may discharge an unbroken spray blanket from sprinkler to sprinkler and sides of room when in operation. Any stock piles, racks or other obstructions interfering with such action shall not be permitted. *Sprinkler system piping shall not be used for the support of stock, clothing, etc.*

(b) Where Conran* heads are installed, the top of head shall be located the same distance below joists or ceiling as specified for deflectors in paragraph (a) of this rule; except that when heads are located under pitched roofs of piers or similar structures, they shall in general be installed in the upright position (not normal to slope of roof) and three (3) feet vertically below the underside of roof. When the administrative official having jurisdiction deems a variation of this rule advisable to obtain a more efficient distribution of water, the heads shall be located with respect to joists or ceiling, as he may direct.

Rule 15. Pipe Sizes. The number of heads on a given size pipe in one fire area in any story shall not exceed the following:

(a) For standard one-half ($\frac{1}{2}$) inch heads—

Size of Pipe	Maximum No. of Heads Allowed
$\frac{3}{4}$ inch	1 head
1 "	2 heads
$1\frac{1}{4}$ "	3 "
$1\frac{1}{2}$ "	5 "
2 "	10 "
$2\frac{1}{2}$ "	20 "
3 "	36 "
$3\frac{1}{2}$ "	55 "
4 "	80 "
5 "	140 "
6 "	200 "
7 "	300 "
8 "	420 "

When it is desired to use pipe of larger size than eight (8) inches in diameter, special ruling will be required by the administrative official having jurisdiction as to the permissibility of its use and the number of heads that may be fed thereby.

Where practicable, it is desirable to arrange the piping so that the number of heads on a branch line will not exceed eight.

When the piping is arranged on the "gridiron" plan, the permissible number of heads may be doubled, provided the feed main is of the size indicated in the schedule for the total number of heads.

Where feed mains supply branch lines of only two heads each, the conditions approach those of long single lines. Such feed mains shall usually be centrally supplied when there are over eight (8) or ten (10) branch lines. Branch lines up to fourteen (14) in number may be fed from end provided a two and one-half ($2\frac{1}{2}$) inch pipe does not supply more than sixteen (16) standard one-half ($\frac{1}{2}$) inch heads in lieu of twenty (20).

Buildings having slatted floors, or large unprotected floor openings without approved stops, shall be treated as one room with reference to the pipe sizes, and the feed main shall be of sufficient size to accommodate the number of heads called for. Larger pipe sizes than are allowed in the schedule for a given number of heads may be required wherever the construction or conditions introduce unusually long runs of feed mains or many angles. Buildings with blind attics with small unprotected openings to floor below, may be piped from the system on the ceiling of floor below, provided pipe size schedule is not overloaded on sizes three (3) inches or under.

Rule 16. Feed Mains. The size of feed mains shall not be less than the size of riser and shall be arranged to run as direct as possible from source of water supply to riser.

Feed mains for stair or other towers without approved stops between floors, when piped on independent riser, shall be of sufficient size to accommodate the total number of sprinklers in such tower.

Rule 17. Risers. There shall be one or more separate risers in each building and in each section of the building divided by fire walls. Risers shall be arranged to provide "Center Central" or "Side Central" supply to feed main. Each riser shall be of sufficient size to supply all the heads on said riser in one story, according to the schedule of pipe sizes in Rule 15.

In buildings of fireproof construction, and for the purposes of this rule, a blank wall, or one in which the openings are protected by standard fire doors, may be considered as a fire wall, if of equivalent construction.

If the conditions warrant, special permission will be granted allowing the heads in a fire section of small area to be fed from the risers in another section, provided the total number of heads in such area does not exceed the following number per floor:

(a) For standard one-half ($\frac{1}{2}$) inch heads, 48.

(b) For Conran* one (1) inch heads, 12.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, 8.

Risers shall not be located close to windows, properly protected from mechanical injury and freezing and shall be properly supported on foundations and by floor plates, clamps, couplings or hangers.

No connections, such as for sill cocks, house service or hose outlets, shall be made with a sprinkler system riser or any part thereof.

Where gravity and pressure tanks feed through a common discharge pipe or "dead riser" to the foot of a riser and an air lock is likely to develop the discharge pipe of the gravity tank shall connect with the discharge pipe, or "dead riser", forty (40) feet below the bottom of the pressure tank.

PUBLIC HEARING

Rule 18. Pipes and Fittings. All pipe shall be full-weight standard wrought iron or steel threaded pipe, well reamed and screwed up tight into fittings without reducing the waterway. Fittings shall be standard cast iron fittings, and shall be long turn pattern on feed mains and risers.

Such fittings shall be designed and guaranteed for a working pressure of 150 pounds per square inch and must be capable of withstanding a hydrostatic test pressure of 750 pounds per square inch without failure.

All pipe shall be secured to the ceiling, walls and other parts of the building with standard steel, wrought or malleable iron hangers.

Extra heavy fittings shall be employed where the normal pressure in the pipe system exceeds one hundred and fifty (50) pounds per square inch, and shall be designed for a working pressure of 250 pounds per square inch and be capable of withstanding a hydrostatic test pressure of 1,250 pounds per square inch without failure.

All underground pipe shall comply with the specifications for cast iron pipe of the American Water Works Association.

Rule 19. Protection of Pipes and Sprinklers. When exposed to moisture, sprinkler pipes and hangers shall be protected against corrosion whenever found necessary by thoroughly cleaning the pipe of all scale and grease and painting with a coat of red lead and linseed oil paint or other acceptable moisture resistive paint. When exposed to chemical fumes, the pipe and fittings shall be coated with graphite or other approved chemical resistive paint. Care shall be taken not to paint the sprinkler heads.

Supply pipes of risers in low basements or low spaces under ground floors exposed to frost, shall be properly protected by a masonry or wood enclosure, properly heated, or lined with mineral wool, sawdust or tar mixed with granulated cork, extending below bottom of pipe and through the flooring of ground floor, or the pipe shall be protected with three alternate layers of one-inch hair felt and building paper or by other approved method. When of wood, such enclosure shall be constructed double with a layer of paper between the two thicknesses of wood.

Where risers, drains, heating pipes, etc., pass through concrete floors or partitions, they shall be protected with a metal sleeve or be grouted with cement mortar.

Wherever sprinklers are exposed to corrosion, the heads shall be protected with an approved hermetically sealed cover, with an approved wax coating.

Rule 20. Drainage. All sprinkler pipe and fittings shall be so installed that they can be thoroughly drained, and where practicable, all piping shall be arranged to drain at the main drips.

Drains or drip pipes shall be so arranged as not to expose any part of the sprinkler system to frost, and shall be so connected, either by check valves or other means, that they will not [overthrow] overflow domestic service or other connections to the same sewer or house drain, or if carried through the wall and exposed to the weather, they shall be fitted with hoods or down-turned elbows.

Drains, pitched not less than one-quarter ($\frac{1}{4}$) inch in 10 (10) feet, shall be installed:

- At the base of the main riser;
- At each alarm valve;
- At each dry-pipe valve;
- At each gravity tank;
- At each pressure tank.
- At each fire department connection;
- On each floor, if independent floor control valves are used;

At each supply main, when the water in the same cannot be removed through any of the above drains. Such drains shall be installed with controlling valves so that flow tests may be made to determine if the water supplies connections from yard mains to the inside of the building

are in order without causing water damage or overflowing service connections to the same house drain. Any such drain shall be not less than two (2) inches in size except that drains at independent floor valves [may be one and one-quarter ($\frac{1}{4}$) inches in size] shall be not less than 1 inch in size where floor valves are not over 2½ inches in size and 1¼ inches where floor valves are larger, and connected to a main drain riser of not less than 1½ inches in size. The drain at the main riser shall discharge into a cone or sight drain, or if carried through the wall and exposed to the weather, it shall be fitted with a hood or down-turned elbow.

At an alarm valve at the top of a riser in a down-fed system a drain shall not be required.

At each gravity or pressure tank erected above roof of a building there shall be a 4-inch valved drain connection so arranged as to discharge on roof of building. And where a tank is on a separate structure altogether independent of buildings drain connection to be arranged to discharge at ground level.

On automatic wet pipe systems, the horizontal branch pipes shall be pitched not less than one-quarter ($\frac{1}{4}$) inch in ten (10) feet to drain towards the sources of supply with drip valves at the low points.

On automatic dry-pipe systems, branch pipes shall be pitched at least one-half ($\frac{1}{2}$) inch in ten (10) feet.

Rule 21. Test Pipe. [On] In all wet-pipe automatic sprinkler systems a test pipe of not less than $\frac{3}{4}$ inch in diameter shall be connected directly with each [riser] system but shall be connected to a pipe of not less than 1¾ inches in diameter in upper story and arranged to discharge, through a ½-inch brass outlet, preferably to a point where it can readily be seen. With long runs or many angles, size of test pipe [shall] should be increased to one (1) inch or larger. Controlling valve should be located at a sufficient distance from where the test pipe passes through the wall of the building so as to reduce to a minimum the chance of freezing of water in test pipe.

In all dry-pipe automatic sprinkler systems a ¾-inch inspector's test pipe shall be installed at the end of the most distant branch line and fitted with a ¾-inch shut-off valve stopped with a brass plug.

Rule 22. Pressure Gauges. A four and one-half ($4\frac{1}{2}$) inch double-spring Bourdon pressure gauge shall be provided in all automatic sprinkler systems as follows:

- Above dry-pipe valves;
- Below dry-pipe valves;
- At the pressure tank;
- At the air compressor;
- Above the alarm valve;
- Below the alarm valve; and

In the connections from city water supply.

Provision may be made for taking the pressure both above and below the alarm valve and the dry-pipe valve with only one gauge at each valve.

A gauge shall not be required at an alarm valve located at the top of a riser in a down-fed system.

Gauge connections shall be taken from the supply main or riser and not from the two-inch drain or test pipe.

Gauges shall be installed in a suitable place protected from freezing and be controlled by a valve with arrangements for draining. A plugged outlet, not less than one-quarter ($\frac{1}{4}$) inch in size, shall be located between each valve and gauge for purpose of installing the inspector's gauge.

Rule 23. Valves. All valves two (2) inches in diameter and under shall be of brass or bronze, or other approved [non-corrodible] non-corrosive material. Valves over two (2) inches in diameter shall be of brass, or bronze or iron body, brass mounted, or of other approved [non-corrodible] non-corrosive material.

All sidewalk Siamese inlet valves, caps and chains shall be of galvanized cast iron or other approved [non-corrodible] non-corrosive material.

PUBLIC HEARING

All gate valves shall be solid or double wedge disc, suffing box pattern with hand wheel, outside screw and yoke, or other approved indicator pattern.

All check valves shall be approved straight way regrinding pattern, so built that the clappers may be readily removed for repairs.

Rule 24. Water Supply Gate Valves. The piping connecting each source of water supply with the sprinkler system shall be provided with a gate valve of the outside screw and yoke type, sealed open and tagged to designate its purpose, so located as to control each source of water supply except that from fire department hose connections. All such gate valves shall be located within the building where easily visible and readily accessible and as close as possible to the supply inlet.

Rule 25. Water Supply Check Valves. The piping connecting each source of water supply with the sprinkler system, including fire department connections, shall be provided with a check valve.

On two-source systems, check valves shall have a gate valve on each side to permit repair of check without shutting off both supplies, except that where the two sources of supply consist of tanks located above the highest line of sprinklers, a gate valve need only be provided on the downstream side of each check valve.

Rule 26. Control Valves. All automatic sprinkler systems shall be provided with a main control or shutoff valve arranged to be readily accessible and sealed in the open position; except that when the sprinkler system is fed from water supplies on the roof of the building, independent and readily accessible floor control valves, sealed in the open position, may be installed.

When not more than ten (10) standard one-half ($\frac{1}{2}$) inch sprinkler heads or three (3) Conran* heads in any automatic wet pipe system are exposed to cold and subject to freezing, shutoff valves may be provided to discontinue the water supply to such heads between November 1 and April 1. A greater number of heads than specified above, located in places which cannot be properly heated, shall be controlled by an automatic dry-pipe valve.

Rule 27. Dry-Pipe Valves. A dry-pipe valve shall be taken to mean a valve automatically controlling the water supply of the sprinkler system in such a manner that under normal conditions its piping system beyond the valve is maintained dry, but in the event of fire, the valve automatically releases the water into the sprinkler system, for fire extinguishing purposes.

Dry-pipe valves shall, for the purpose of these rules, be classified as follows:

Type A, in which the valve is actuated by the release of compressed air in the sprinkler piping system, due to the opening of a sprinkler head; and

Type B, in which the valve is actuated by an approved trip under electric control of an approved automatic thermostatic fire alarm system.

Dry-pipe valves shall be located as near as practicable to the sprinkler system in an enclosed and accessible place protected from mechanical injury and freezing.

When anti-columning pipes are used, they shall be either lead lined or of brass.

Automatic wet-pipe sprinkler systems in which only twenty-five (25) per cent of the heads are required to be maintained dry for protection from freezing, shall have only such heads under dry-pipe valve control.

(a) When "Type A" valve is installed, the air pressure in sprinkler systems under such dry-pipe valve control shall not exceed forty (40) pounds per square inch, nor be permitted to fall below twenty-five (25) pounds per square inch, nor shall it be less than one-sixth ($\frac{1}{6}$) of the water pressure in any case.

The air compressor shall have a capacity of not less than eleven (11) cubic feet per minute and the air supply for the pump shall be taken, if possible, from a room containing dry air, or it shall be passed through a drying chamber containing calcium chloride, in order to avoid the introduction of moisture into the system.

The air pressure on such dry-pipe systems shall be maintained throughout the year.

Not more than the following number of heads shall be controlled by one "Type A" dry-pipe valve:

- (a) For standard one-half ($\frac{1}{2}$) inch heads40
- (b) For Conran* one (1) inch heads10
- (c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads 6

Where equipped with an approved quick-opening device, the following number of heads may be controlled by one "Type A" dry-pipe valve:

- (a) For Standard one-half ($\frac{1}{2}$) inch heads80
- (b) For Conran* one (1) inch heads20
- (c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads.12

(b) When "Type B" valve is installed the actuating alarm system shall be designed to operate at a temperature lower than that required to open the sprinkler heads, and all connections between the alarm system and the dry-pipe valve shall be adequately protected against injury of any kind.

When required by the administrative official having jurisdiction, the dead end of every feed main in such dry-pipe system shall be provided with an air relief valve or vent so constructed as to be normally open in order to permit the free escape of air from the system, but to close automatically against the escape of water.

Not more than the following number of heads shall be controlled by one "Type B" dry-pipe valve:

- (a) For Standard one-half ($\frac{1}{2}$) inch heads50
- (b) For Conran* one (1) inch heads12
- (c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads. 8

Rule 28. Alarm Valve. All automatic wet pipe sprinkler systems shall be equipped with an alarm valve so constructed that a flow of water through a one-half ($\frac{1}{2}$) inch orifice will operate an electric or mechanical gong.

Dry pipe valves shall be equipped with a reliable device to give either an electrical or mechanical alarm.

Rule 29. High and Low Water and Pressure Alarm. All gravity tanks shall be equipped with a device to indicate when the water falls below or rises above the normal level in the tank, with an indicator or alarm located in the engineer's room near the pump.

All pressure tanks shall be equipped with a device to indicate when the pressure in the tank falls below seventy (70) or rises above eighty (80) pounds per square inch with an indicator or alarm located in the engineer's room [near the compressor].

Rule 30. Heating of Tanks. The water in all sprinkler tanks subject to freezing shall be protected by internally heating the water or enclosing the tank in a frost-proof house properly heated and lighted.

Rule 31. Concealed Pipe Systems. All pipe in concealed pipe systems shall be of standard full-weight wrought iron or steel, painted with two coats of protective paint, one before and one after installation. Such pipe shall be installed in ducts or be encased in cement mortar and shall be inspected prior to concealment. When installed in the concealed space between floor arches and ceiling, such pipe shall be supported by hangers and all pipe, fittings and hangers be protected with two coats of paint.

Rule 32. Preparation of Building. Floor or wall openings and other structural defects which prevent the banking up of heated air and retard the automatic action of sprinkler heads shall be provided with the necessary curtain boards and draft stops to permit specific control of the fire by the local sprinklers.

Curtain boards shall project at least three (3) inches below the lowest sprinkler.

PUBLIC HEARING

Rule 33. *Approval of Sprinkler System [Tests]. Before acceptance* all automatic sprinkler systems, excluding the water supply tanks, shall be subjected after installation to a hydrostatic pressure of a test of at least fifty (50) pounds per square inch in excess of that which will be normally carried and observed in the sprinkler system, such test pressure, however, never to be less than one hundred and fifty (150) pounds per square inch in any part of the system.

All pressure tanks shall be tested after erection to a test pressure of one and one-half (1½) times the working pressure. To prevent the possibility of serious water damage in case of a break, the pressure shall be maintained by a ball pump, the main controlling gate being meanwhile kept shut. Brine or other corrosive chemicals shall not be used for testing systems.

In automatic dry-pipe systems with "Type A" valve control, an air pressure of forty (40) pounds per square inch shall be pumped up, be held for twenty-four (24) hours, and all leaks stopped which allow a loss of pressure of over two (2) pounds per square inch for the twenty-four (24) hours.

In the case of automatic dry-pipe systems with differential "Type A" valve, the valve shall be held off its seat during the test to prevent injuring the valve.

Non-automatic systems shall be tested after installation to not less than fifty (50) pounds per square inch in excess of the pressure necessary to reach the highest line of sprinklers.

All tests of installed systems shall be made by the contractor in the presence of the Fire Commissioner, or his authorized representative.

No piping, devices nor any portion of a newly constructed sprinkler system shall be covered up or permanently concealed until tested by the Bureau of Fire Prevention and approved of in writing, except piping passing through floors, walls, partitions or beams for distances equal to the thickness of such floors, walls, partitions or beams.

Rule 34. *Non-fireproof Business Buildings.* Automatic sprinklers required in non-fireproof business buildings under the provisions of Chapter 5, Article 4, Section 72, Code of Ordinances, unless otherwise specifically provided in these rules, shall consist of at least a One Source System.

Rule 35. *Dangerous or Hazardous Buildings.* Automatic sprinklers required in buildings having occupancies considered to be dangerous or hazardous by the Fire Commissioner shall consist of at least a one-source system unless otherwise specifically provided for in these rules.

Rule 36. *Factories and other Buildings.* Automatic sprinklers required in buildings under the provisions of the Code of Ordinances and the Labor Law shall consist of at least one-source system.

Rule [35] 37. *Theatre Buildings.* Automatic sprinklers required in theatre buildings under the provisions of Chapter 5, Article 25, Section 524, Code of Ordinances, shall consist of at least a One Source System.

Rule [36] 38. *Firework Storage.* Automatic sprinklers required in buildings in which fireworks are stored or sold under the provisions of Chapter 10, Article 6, Section 92, Code of Ordinances, shall consist of a Two Source System.

Rule [37] 39. *Nitro-Cellulose Products.* Automatic sprinklers as required in buildings in which nitro-cellulose products are stored under the provisions of Chapter 10, Article 19, Section 232, Code of Ordinances, shall consist of a system supplied from both approved gravity tank supply and an approved pressure tank supply, except that no change shall be required in supplies to automatic sprinkler equipments previously approved by the Fire Commissioner as two source systems, in conformity with the provisions of this rule as in force up to December 1, 1921.

In buildings wherein are stored or handled only limited quantities of nitro-cellulose products, not exceeding 500 pounds, the automatic sprinklers may consist of a two source system as provided for in Rule 12.

Rule [38] 40. *Inflammable Motion-Picture Films.* Automatic sprinklers, required in buildings in which inflammable motion-picture films are stored under the provisions of Chapter 10, Article 20, Section 241, Code of Ordinances, shall consist of a system supplied from both an approved gravity tank supply and an approved pressure tank supply except that no change shall be required in supplies to automatic sprinkler equipments previously approved by the Fire Commissioner as two source systems in conformity with the provisions of this rule as in force up to December 1st, 1921.

Rule [39] 41. *Existing Installations and Approvals.* Automatic extinguisher systems and devices heretofore approved and accepted by the authorities having jurisdiction shall not be required to conform to the provisions of these rules; and all such systems heretofore installed shall not be required to be altered to conform to these rules so long as the fire hazard due to construction and occupancy of the building is not increased or where substantial additions or extensions in height or area is made to the building when these rules shall apply if deemed advisable or necessary by the Fire Commissioner and the system after inspection is found to be in good working order.

Rule 42. *Communicating Openings.* When a building fully equipped with sprinklers communicates with another not so equipped the openings must be protected by approved fire doors on both sides of the wall, one of which must be automatic.

Rule 43. *Maintenance Inspections.* Automatic sprinkler systems shall be inspected at least once a month by the person in charge of the building, or by other competent person employed by the owner, to see that all parts of the system are in perfect working order, and the fire department connection or connections, if any, ready for immediate use by the Fire Department. A detailed record of each inspection shall be kept for examination by a representative of the Fire Department.

There shall be kept available at all times in the premises a supply of extra sprinklers, never less than six (6), to replace promptly any fused or damaged sprinklers. And there shall be one or more employes instructed in the maintenance of sprinkler system.

Rule 44. *Open Sprinklers.* When open sprinklers are required for exposure protection by the Fire Department as specified in the Building Code they shall be installed in accordance with the rules of the National Board of Fire Underwriters. Plans for such installation to be filed with the Fire Department for approval.

CITY OF NEW YORK

BOARD OF ESTIMATE AND APPORTIONMENT

AMENDMENT TO SECTION 21, BUILDING ZONE RESOLUTION.

(Adopted May 22, 1925)

"No gasoline service station may be erected or extended on any portion of a street between two intersecting streets, in which portion there exists an exit from or an entrance to a public school; and in no case within a distance of 200 ft. from the nearest exit from or entrance to a public school. This protection shall also apply to duly organized schools for children under 16 years of age, giving regular instruction at least five days a week for eight months or more each year, owned and operated by any established religious body or educational corporation."

This issue of the Bulletin contains, in the order
1—

Docket.

Call of Clerk's Calendar.

The Trial Calendar.

Notices in Building Zone Cases.

Minutes of Meeting, Board of Appeals, June 16,
1925.

Minutes of Meeting, Board of Standards and Appeals,
June 16, 1925.

Corrections.

Notice of Public Hearing.

Amended Building Zone Resolution.

Reserve Calendar.

Progress Report.

DATES AND HOURS OF MEETING.

Board of Appeals, Tuesdays, at 10 a. m.

Special meetings as listed in this Calendar.

Call of Clerk's Calendar, Tuesdays, at 2 p. m.

Board of Standards and Appeals, as listed in the Cal-
endar.

All hearings are held in Room 1013, Municipal Building,
Manhattan.

HOURS FOR CONSULTATION.

10 A. M. to 1 P. M.

Any person desiring to consult the chairman or the en-
gineers, pertaining to the work of either board, will be
seen only between the hours of ten in the morning and one
in the afternoon—Saturdays excepted.

CALL OF CLERK'S CALENDAR.

The Clerk's Calendar consists of applications under the
Building Zone Resolution, and its object is to give inter-
ested property owners opportunity to file objections, if any,
and will be called in Room 1013, Tuesday, June 23, 1925,
at 2 o'clock. At this call each case is set for hearing
on a definite day.

The next subsequent Call of the Calendar will be on
Tuesday, June 30, 1925, at 2 o'clock.

The Clerk's Calendar is not to be confused with the
calendar of cases that have been definitely set for hearing
on fixed days.

NOTICE TO APPELLANTS AND PETITIONERS.

No appeal, application or petition will be entertained in
connection with which court proceedings are pending or in
progress, nor accepted that are not filed within twenty
days from the date of the action of the Administrative Of-
ficial.

Any communication purporting to be an appeal, applica-
tion or petition shall be regarded as a mere notice of in-
tention to seek relief until it is filed on the form required
by the rules of this board.

Upon receipt of any such communication the writer will
be supplied with the official forms for presenting his ap-
peal, application or petition, and if he fails to supply the
data required thereon, within twenty days, his case may be
dismissed for lack of prosecution.

At the time of filing an application, the appellant or peti-
tioner shall forward a signed notice of appeal addressed
to the administrative official (either superintendent of build-
ings or fire commissioner) and file with this board a dupli-
cate of said notice.

Petitioners are advised that their plans must indicate the
points of the compass so as to establish the true location and
position of the property, the subject of the appeal.

Appeals, applications and petitions will be simplified and
expedited by conforming to these directions.

WILLIAM E. WALSH, Chairman.

BOARD OF APPEALS.

Tuesday, July 28, 1925, at 10 a. m.

Appeal from Administrative Order.

904-24-A—235-239 West 23rd street, Manhattan.

MINUTES

BOARD OF APPEALS

REGULAR MEETING.

TUESDAY MORNING, JUNE 16, 1925.

Present: Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison, Holland, Connell and Fire Chief Kenlon.
The minutes of the regular meeting of the board of appeals held on Tuesday morning, June 9, 1925, and the minutes of the special meeting of the board of appeals, held on Tuesday afternoon, June 9, 1925, were approved and printed in the Bulletin, No. 24, Vol. X.

APPEALS FROM ADMINISTRATIVE ORDERS.

7-124-A.
APPELLANT—Street & Smith Corporation, owner.
SUBJECT—Appeal from order of fire commissioner.
PREMISES AFFECTED—79-89 Seventh avenue, Manhattan.

APPEARANCES—
For Appellant: Murray Hulbert.
For Administration: Inspector Lynch of fire department.

ACTION OF BOARD—Laid over to June 23, 1925, at 2 p. m., on request of appellant's representative.

7-24-A.
APPELLANT—Eastman Kodak Company, owner.
SUBJECT—Appeal from order of fire commissioner.
PREMISES AFFECTED—235-239 West 23rd street, Manhattan.

APPEARANCES—
For Appellant: Murray Hulbert.
For Administration: Inspector Lynch of fire department.

ACTION OF BOARD—Laid over to July 28, 1925, at 10 a. m., on request of appellant's representative, to comply with order.

7-24-A.
APPELLANT—Abel I. Smith, for George J. McFadden Co., Inc., lessee.
SUBJECT—Appeal from order of fire commissioner.
PREMISES AFFECTED—202 Flatbush avenue, Brooklyn.

APPEARANCES—
For Appellant: Murray Hulbert.
For Administration: Inspector Lynch of fire department.

ACTION OF BOARD—Laid over to June 23, 1925, at 2 p. m., on request of appellant's representative, pending action of fire department.

8-25-A.
APPELLANT—The Frank A. Munsey Company, owner.
SUBJECT—Appeal from order of fire commissioner.
PREMISES AFFECTED—280 Broadway, Manhattan.
APPEARANCES—None.
ACTION OF BOARD—Laid over to June 30, 1925, at 10 a. m., on written request.

381-25-A.
APPELLANT—I. Margon and C. Glaser, for Gerard Avenue Construction Co., owner.

SUBJECT—Appeal from order of fire commissioner.
PREMISES AFFECTED—1229-1231 Gerard avenue, The Bronx.

APPEARANCES—
for Appellant: Joseph Sultan.
ACTION OF BOARD—Laid over to June 30, 1925, at 10 a. m., on request.

1447-24-A.
APPELLANT—Keiner Williams Stamping Co., owner.
SUBJECT—Appeal from order of fire commissioner.
PREMISES AFFECTED—8746 123rd street, Richmond Hill, Queens.

APPEARANCES—
For Appellant: Frederick Fullhardt.
For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Laid over to July 14, 1925, at 10 a. m., on request of appellant's representative.

308-25-A.
APPELLANT—Croker National Fire Prevention Engineering Co., for Kohar Realty Co. and City of New York, owners.

SUBJECT—Appeal from order of fire commissioner.
APPEARANCES—
PREMISES AFFECTED—25-27 Thames street, Manhattan.

For Appellant: Herman E. Horwood.
For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Appeal granted on condition.
CONDITIONS—As specified in resolution.

THE VOTE—
Affirmative: Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison, Connell and Holland 6
Negative 0
Absent: Fire Chief Kenlon 1

THE RESOLUTION: (308-25-A)

WHEREAS, Croker National Fire Prevention Engineering Company, for Kohar Realty Co., owner, filed, March 19, 1925, an appeal, with the board of appeals, from an order of the fire commissioner, affecting premises 25-27 Thames street, Manhattan; and

WHEREAS, the order of the fire commissioner, dated November 12, 1924, reads:

"Order No. 67501-F:

"1. Provide iron or kalameined shutters at all openings in the exterior wall above first story, which are distant in a direct line less than 30 ft. from any opening in any other building and not in the same plane with said openings, and which are not more than 50

MINUTES

ft. above a neighboring roof at north and east sides of building * * *";

and

WHEREAS, the building is non-fireproof, seven stories in height, having a frontage of 74 ft. on Thames street and a frontage of 56 ft. 10 in. on Greenwich street; OCCUPIED for offices and light manufacturing, 102 persons above the 1st story; and

WHEREAS, there are four windows in the north wall on the 6th and 7th stories within 50 ft. of the roof of a five-story building to the north; two windows on the 6th and 7th stories in the easterly wall, south, within 50 ft. of the roof of a five-story building to the east, and also 7 windows in the easterly court on each story above the 1st story within 30 ft. from openings in a five-story building to the east and within 50 ft. of the roof of a three-story building and one-story extension to the east; and

WHEREAS, appellant proposes to provide iron shutters on openings in the north wall on the 6th and 7th stories and also on the openings on the 6th and 7th stories in the east gable wall

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted on condition* that the windows in the northerly gable wall, above roof of adjoining premises, and in the easterly wall, above the roof of the adjoining five-story building, shall be equipped with iron shutters or other approved fire protection.

1516-24-A.

APPELLANT—L. I. Widder & Co., Inc., lessee.

SUBJECT—Appeal from order of fire commissioner.

PREMISES AFFECTED—502 West Broadway, Manhattan.

APPEARANCES—

For Appellant: Henry Regelman.

For Administration: Inspector Lynch of fire department.

ACTION OF BOARD—Appeal granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison, Connell and Holland

Negative

Absent: Fire Chief Kenlon

THE RESOLUTION:

(1516-24-A)

WHEREAS, L. E. Widder & Co., Inc., lessee, filed, September 30, 1924, an appeal, with the board of appeals, from an order of the fire commissioner, affecting premises 502 West Broadway, Manhattan; and

WHEREAS, the order of the fire commissioner, dated September 9, 1924, reads:

"With reference to your application dated June 23, 1924, for a permit to maintain a wholesale drug store at the above location I regret to inform you that I am without power to grant such a permit for the reason that the building is occupied as a workshop on the 3rd and 5th stories as per Section 272, Subdivision C, Chapter 10, Code of Ordinances.

"You are therefore ordered to

"Discontinue the business of a wholesale drug and chemical supply house on the above mentioned premises."

and

WHEREAS, the building is non-fireproof, five stories in height, 25 ft. by 75 ft. in area at 1st story and 25 ft. by 69 ft. in area above. OCCUPIED: 1st story, wholesale drug and chemical supply house, 4 persons; 2nd story, metal company, 5 persons; 3rd and 4th stories, vacant at present; 5th story, metal plating, 4 persons; and

WHEREAS, appellant contends that the ceiling of the 1st story is protected with metal; that there is only a small

supply (sufficient only for daily needs) of inflammable chemicals, stored in sealed containers, in the premises, and further contends having been located on the premises for years and being lessee and consequently unable to make changes in the occupancy of the building; and

WHEREAS, permits have been in force since 1914 for same and like occupancy, and this order was issued due a workshop (manufacturing and assembly of metal goods) over the premises, which the board deemed was not hazardous.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted on condition* that the use and operation of drug and chemical supply business on these premises shall be restricted to medicines or drugs, maintained in metal, glass or original containers; and that the quantities and compounds shall be restricted to the conditions permitted heretofore under permit in force issued by fire commissioner since 19

1085-23-A.

APPELLANT—United Dressed Beef Co., owner.

SUBJECT—Appeal from order of fire commissioner.

PREMISES AFFECTED—778-786 First avenue, 400-414 East 44th street and 405-413 East 43rd street, Manhattan.

APPEARANCES—

For Appellant: Franklin Malone and D. Ma farlane.

For Administration: Inspector Carroll of fire department.

ACTION OF BOARD—Appeal granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

CONDITIONS—As specified in resolution.

Affirmative: Chairman Walsh, Messrs. Kennedy, Gunnison, Connell, Holland and Fire Chief Kenlon

Negative: Mr. Dowd

Absent

THE RESOLUTION:

(1085-23-A)

WHEREAS, United Dressed Beef Co., owner, filed, September 13, 1923, an appeal, with the board of appeals, from an order of the fire commissioner, affecting premises 778-786 First avenue, 400-414 East 44th street, 405-413 East 43rd street, Manhattan; and

WHEREAS, the order of the fire commissioner, dated April 11, 1923, No. 45071-F, reads:

"Install a standpipe system with risers 4 inches diameter * * *";

and

WHEREAS, the building is non-fireproof, "L"-shape, four stories in height, 260 ft. front on East 44th street, 100 ft. front on First avenue and 130 ft. front on East 43rd street (39,000 sq. ft.), separated into small sections by fireproof brick partition walls; OCCUPIED as an abattoir, 21 employees; and

WHEREAS, appellant contends a sprinkler system is being installed, which will afford ample fire protection; and

WHEREAS, the appeal was granted by the board at its meeting on November 13, 1923, on condition that a two source sprinkler system be installed in accordance with the rules of the board and so long as subdivision of the floor area remains substantially unchanged; and

WHEREAS, appellant has installed the sprinkler system, but requests a modification of the rules to permit more than 400 heads in one dry pipe valve, and objection of the fire commissioner, rendered March 24, 1925, Order No. 551-2, reads:

"1. No more than 400 heads may be permitted in one dry pipe valve."

and

WHEREAS, appellant contends that he has installed accelerators on the dry pipe valves.

MINUTES

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted on condition* that a two-source sprinkler system be installed in accordance with the rules of the board of standards and appeals; and *granted* only so long as the subdivision of floor area as indicated on plans filed in the appeal shall remain substantially unchanged.

317-25-A.

APPELLANT—Robert H. Morris, for Mary L. Morris, owner.

SUBJECT—Appeal from order of fire commissioner.

PREMISES AFFECTED—10 Grove street, Manhattan.

APPEARANCES—

For Appellant: Alfred W. Morris.

For Administration: Inspector Lynch of fire department.

ACTION OF BOARD—Appeal granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison, Connell, Holland and Fire Chief Kenlon

Negative

Absent

THE RESOLUTION:

(167-25-A)

WHEREAS, Robert H. Morris, for Mary L. Morris, owner, filed, February 9, 1925, an appeal, with the board of appeals, from an order of the fire commissioner, affecting premises 10 Grove street, Manhattan; and

WHEREAS, the order of the fire commissioner, dated July 1, 1924, reads:

"Referring to your application dated Mar. 3, 1924, for a permit to store and use grade B fuel oil in connection with your fuel oil burning equipment, you are hereby advised that a recent inspection shows that the following must be done as prescribed by the Fuel Oil Rules adopted by the Board of Standards and Appeals, before a permit may be issued:

"1. Plan showing in detail the layout of the fuel oil equipment must be filed with this department together with a certificate of the superintendent of buildings showing the present construction of the enclosure, and the location of the tank is in accordance with the requirements of the Building Code and these rules.

"Tank in use is not considered as an auxiliary supply tank, hence, gravity feed is not permitted—Rule 22A & 34.

"Installation of fuel oil burning equipment must be in accordance with approved plan."

WHEREAS, the building is non-fireproof, 2½ stories in height, 18 ft. by 32 ft. in area; OCCUPIED as a dwelling; and

WHEREAS, a fuel oil burning system has been installed consisting of a 60 gallon fuel oil tank (gravity flow), a Richmond gravity fuel oil burner and the necessary valves and piping to make a complete installation; and

WHEREAS, appellant contends that practical difficulties prevented the installation of a storage tank and that the 60 gallon tank takes the place of a so-called "auxiliary" tank.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted*, only so far as it affects the single 60 gallon tank, on condition that the fuel oil burning equipment shall be installed and otherwise maintained in accordance with the fuel oil rules of the board of standards and appeals.

317-25-A.

APPELLANT—Duchness Neckwear Co., Inc., lessee.

SUBJECT—Appeal from order of fire commissioner.

PREMISES AFFECTED—17 West 17th street, Manhattan.

APPEARANCES—

For Appellant: Joseph A. Lockwood.

For Administration: Inspector Lynch of fire department.

ACTION OF BOARD—Appeal granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison, Connell, Holland and Fire Chief Kenlon

Negative

Absent

THE RESOLUTION:

(317-25-A)

WHEREAS, Duchness Neckwear Co., Inc., lessee, filed March 24, 1925, an appeal, with the board of appeals, from an order of the fire commissioner, affecting premises 17 West 17th street, Manhattan; and

WHEREAS, the order of the fire commissioner, dated February 25, 1925, reads:

"Referring to your application dated December 8, 1924, to transfer permit No. 105411 dated to expire on June 27, 1925, from premises No. 29 West 17th Street to 17 West 17th Street, I regret to inform you that your application has been disapproved for the reason that the latter building in parts is used for the manufacture, storage or sale of materials of a highly inflammable nature.

"You are, therefore, hereby, ordered to:

"1. Discontinue the storage of gasoline on these premises contrary to the provisions of Sections 112-2C, 176 and 114-2, Chapter 10, Code of Ordinances."

and

WHEREAS, the building is fireproof, 11 stories in height, 53 ft. by 87 ft. in area; OCCUPIED as a tenant factory, approximately 198 persons above the 1st story; appellant occupying the 5th story for the manufacture of neckwear and using five gallons of benzine for cleaning and dyeing purposes; the building is equipped with a sprinkler and standpipe system; and

WHEREAS, appellant contends that the five gallons of benzine are stored in a safety can, which is located on an iron platform outside the building and that only a small quantity is used at one time for manufacturing purposes; and contends, further, that it is necessary to have this small amount of benzine on hand in order to conduct the business.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted on condition* that the volatile oil on the premises shall be limited to benzine and the quantity shall not exceed two (2) gallons, maintained in an approved safety can.

392-25-A.

APPELLANT—Samuel Rosenblum, for Vulcan Button Works, Inc., lessee.

SUBJECT—Appeal from order of fire commissioner.

PREMISES AFFECTED—15 West 17th street, Manhattan.

APPEARANCES—

For Appellant: Samuel Rosenblum.

For Administration: Inspector Lynch of fire department.

ACTION OF BOARD—Appeal granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison, Connell, Holland and Fire Chief Kenlon

Negative

Absent

THE RESOLUTION:

(392-25-A)

WHEREAS, Samuel Rosenblum, for Vulcan Button Works, Inc., lessee of 7th story, filed, April 11, 1925, an appeal,

MINUTES

with the board of appeals, from an order of the fire commissioner, affecting premises 15 West 17th street, 7th story, Manhattan; and

WHEREAS, the order of the fire commissioner, dated February 25, 1925, reads:

"Order No. 28296-LC:

"You are hereby notified that an inspection of premises 15 West 17th Street, Manhattan, used for the storage of nitro-cellulose material, shows that the following must be done before permit requested by you can be issued:

"1. Reduce the quantity of nitro-cellulose products on your premises to one hundred (100) pounds, or less, Section 232-2-1, Chapter 10, Code of Ordinances.

"11. Pressure tank of sprinkler system must contain not less than 5,000 gallons of water.";

and

WHEREAS, the building is fireproof, 11 stories in height, 28 ft. by 84 ft. in area; OCCUPIED as a tenant factory, 124 persons above the 1st story (the 10th story being vacant at present), appellant occupying the 7th story for the manufacture of celluloid buttons; the capacity of the pressure tank being 5,000 gallons, but as one-third of the tank must be air under pressure, the water content is 3,333 gallons; and

WHEREAS, appellant contends that in addition to the pressure tank there is a 10,000 gallon gravity tank on the building; that the celluloid is properly carried in a cabinet, vented to the outer air with sprinkler head inside of same, and appellant requests permission to store 200 lbs. of celluloid on the premises.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal, as to Item 1, be and it hereby is *denied*; and, as to Item 11, be and it hereby is *granted on condition* that an approved gravity tank, with a reserve supply of 5,000 gallons for the sprinkler and 3,500 gallons for the standpipe system, shall be maintained in addition to the present pressure tank.

312-25-A.

APPELLANT—Samuel Rosenblum, for L. H. Stern, Inc., owner.

SUBJECT—Appeal from order of fire commissioner.

PREMISES AFFECTED—56-60 Pearl St., Brooklyn.

APPEARANCES—

For Appellant: Samuel Rosenblum.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Appeal granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison, Connell, Holland and Fire Chief Kenlon

Negative

Absent

THE RESOLUTION:

(312-25-A)

WHEREAS, Samuel Rosenblum, for L. H. Stern, Inc., owner, filed, March 21, 1925, an appeal, with the board of appeals, from an order of the fire commissioner, affecting premises at Nos. 56-60 Pearl street, Borough of Brooklyn; and

WHEREAS, the order of the fire commissioner, dated February 19, 1925, reads:

"Order No. 71807-F:

"1. Provide iron shutters at all openings in the exterior wall above 1st story which are distant in a direct line less than 30 ft. from any opening in any other building and not in the same plane with said openings and which are not more than 50 ft. above a neighboring roof at north side of buildings, or other approved protection, as per Sec. 375, Article 18, Chapter 5 of the Code of Ordinances.";

and

WHEREAS, the building is non-fireproof, six stories height, having a frontage of 75 ft. on Pearl street and 47 ft. 5 in. on Water street; OCCUPIED for the manufacture of smoking pipes on the 1st and 5th stories, inclusive, and on the 6th story for the manufacture of boxes, 149 persons above the 1st story; and

WHEREAS, there are six openings, in the northerly wall on each story above the 1st story which are within 50 ft. of the roof of a one-story shed and also less than 30 ft. from the openings in and within 50 ft. of the roof of two-story garage located 25 ft. 6 in. to the north of the premises in question; and

WHEREAS, appellant contends that the 25 ft. 6 in. wide plot lying to the north is under the same ownership as the premises in question; that the garage is 25 ft. 6 in. distant and that the openings in the garage wall are small (2 ft. by 3 ft. 6 in. in area) and that the premises in question are completely protected by a sprinkler system.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted on condition* that any windows on the course of fire escapes, stairhalls or elevator shaft of these premises on north side shall be protected; and *granted* only so long as all openings in the building to the north, adjoining, shall be equipped in accordance with the code of ordinances.

232-25-A.

APPELLANT—Lanman & Kemp, Inc., lessee.

SUBJECT—Appeal from order of fire commissioner.

PREMISES AFFECTED—20 Beekman street, Manhattan.

APPEARANCES—

For Appellant: J. R. Noggle.

THE RESOLUTION:

(232-25-A)

WHEREAS, Lanman & Kemp, Inc., for M. H. Kemp owner, filed, February 25, 1925, an appeal, with the board of appeals, from an order of the fire commissioner, affecting premises 20 Beekman street, Manhattan; and

WHEREAS, the order of the fire commissioner, dated December 6, 1924, reads:

"Order No. 69437-LF:

"2. Provide automatic self-closing attachments to door of elevator shaft on all stories. Sec. 20, Ch. 12, Code of Ordinances.";

and

WHEREAS, the building is non-fireproof, five stories in height, 21 ft. by 79 ft. in area at the 1st story and 21 ft. by 70 ft. in area above; OCCUPIED for bottling proprietary medicines; 1st story, 8 persons; 2nd story, 11 persons; 3 persons above the 2nd story; and

WHEREAS, appellant contends that the upper stories are practically unoccupied and that no hazard exists.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted on condition* that the elevator shaft in the subcellar shall be enclosed in partitions of material similar to balance of enclosure, and that the doors to elevator shaft throughout on each floor shall be counterweighted, equipped with metal chains and fusible links.

256-25-A.

APPELLANT—Rudolph P. Miller, for B. L. W. Construction Corp., owner.

SUBJECT—Appeal from order of fire commissioner.

MINUTES

PREMISES AFFECTED—North side of West 189th street, between Wadsworth avenue and Wadsworth terrace, Manhattan.

APPEARANCES—
For Appellant: Rudolph P. Miller.
For Administration: Inspector Carroll of fire department.

ACTION OF BOARD—Appeal granted on condition.
CONDITIONS—As specified in resolution.

THE RESOLUTION: (256-25-A)

WHEREAS, Rudolph P. Miller, for B. L. W. Construction Corporation, owner, filed, March 6, 1925, an appeal, with the board of appeals, from an order of the fire commissioner, affecting premises 320 Wadsworth avenue, Borough of Manhattan; and

WHEREAS, the order of the fire commissioner, dated January 2, 1925, reads: :
"Order No. 70425-F:

"1. Install a standpipe system with risers 4 inches in diameter tested to withstand a pressure of 300 lbs. per square inch, extending from cellar to roof, with necessary check valves and 2½ inch regulation Fire Department outlets on each story (including basements, cellars and roofs), placed within main stairway enclosure. Each outlet to be provided with sufficient feet of 2½ inch standard hose attached thereto.";

and
WHEREAS, the building is non-fireproof, six stories in height, 85 ft. 6 in. by 182 ft. (13,130 sq. ft. within exterior walls) in area; divided into several sections (each less than 5,000 sq. ft.) by partition walls; OCCUPIED as a tenement; and

WHEREAS, appellant contends that the building faces on three streets and that the rear is accessible from a rear yard; that by means of 8 in. interior walls the building is divided into several sections, each less than 10,000 sq. ft. in area, and that other enclosing walls within the building provide a substantial barrier against the spread of fire.

Resolved, that the order of the fire commissioner be and it hereby is modified, and the appeal be and it hereby is granted on condition that no single fire area shall exceed 5,000 sq. ft.; that a public corridor shall be maintained on each story throughout from the apartments at either end of building with 8 in. walls of approved masonry; that all openings in and to the corridor shall be provided with self-closing, fireproof doors; and that the building shall not exceed a height of 65 ft.

THE RESOLUTION:

(1510-24-A)

WHEREAS, W. T. McCarthy, for J. Goldstein, owner, filed, December 22, 1924, an appeal, with the board of appeals, from a decision of the fire commissioner, affecting premises 1038 Ocean avenue, Borough of Brooklyn; and

WHEREAS, the decision of the fire commissioner, rendered December 17, 1924, an acting on Alt. Application No. 1583-24, reads:

"3. Standpipe equipment is required in building exceeding 10,000 square feet in area. Plans for such system must be filed and approved.";

and

WHEREAS, under date of May 13, 1925, appellant amended his papers to include the objection of the fire commissioner, rendered May 8, 1925, Order No. 96310-LC, reading:

MINUTES

"1. Place fuel oil storage tank or tanks in permanent position and make hydrostatic test in presence of an inspector from Fire Department.

"2. Provide a hydrostatic test of not less than 150 pounds per square inch for all fuel oil carrying piping * * *";

and

WHEREAS, appellant requests permission to operate the fuel oil burning equipment as installed, and submits a letter from manufacturer as to shop test; and

WHEREAS, the building is non-fireproof, six stories in height, H-shape in plan; each wing being approximately 140 ft. by 43 ft. in area and the cross section being approximately 42 ft. by 35 ft. in area (the total area being approximately 11,500 sq. ft.), separated by 4 in. terra cotta partition walls into six subdivisions; the area of the maximum being 2,824 sq. ft.; OCCUPIED as an apartment house for 57 families; and

Resolved, that the order of the fire commissioner, No. 96310, be and it hereby is *modified*, and the appeal be and it hereby is *granted*, as to Item 1, *on condition* that certificate of factory test shall be filed with the fire department as to tank; as to Item 2, *on condition* that standard wrought iron piping shall be used throughout the fuel oil equipment; and *on further condition* that the fuel oil equipment shall be installed and maintained in accordance with the rules of the board of standards and appeals in all other respects; that the decision of the fire commissioner on Alt. Application No. 1583-1924, Item 3, be and it hereby is *affirmed*, and the appeal as to this item be and it hereby is *denied*.

THE RESOLUTION:

1399-24-BZ)

WHEREAS, John J. Dunnigan, for Frederick P. Ballard, owner, filed, November 25, 1924, an application, under the building zone resolution, to permit partly in a business district and partly in a residence district the alteration and

MINUTES

change of occupancy of a building used as a stable and private garage to a garage for the storage of three commercial and two pleasure motor vehicles, two spaces rented to persons not residing on the premises; premises 708 East 216th street, Borough of Bronx; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its regular meeting, June 16, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that White Plains avenue is a business district and East 216th street is a residence district; and

WHEREAS, the decision of the superintendent of buildings, rendered November 20, 1924, reads:

"Your request for a certificate of occupancy for the rear portion of the first story of the two-story brick building at 708 East 216th Street, Bronx, as a public garage for the storage of more than five motor vehicles is hereby denied as the premises are located in a residence district as established by the Building Zone Resolution and our inspector reports the building is now occupied as a stable, private garage and dwelling.";

and
WHEREAS, the existing building, occupied as a stable, private garage and dwelling, is non-fireproof, two stories in height, 32.5 ft. by 100 ft. in area; 19 ft. of the building are in the business district and 13.5 ft. are in the residence district. It is proposed to occupy the 1st story as a funeral parlor and a garage for the storage of a hearse auto, two autos for funeral purposes and two (2) pleasure cars, space for pleasure cars to be rented to persons not residing on the premises; and

WHEREAS, the board deemed that this application comes within the provisions of exemption specified in section 7-b, and, in addition to that, applicant has filed substantial consents of affected property owners within the street front, and that the applicant has conducted his business on this site for the last 25 years.

Resolved, that the board of appeals does hereby make a variation in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is granted on condition that the storage capacity of the garage shall be limited to five automobiles, all but two of which shall be restricted to use in the business conducted and operated by the owner of the premises, and space for the two others may be rented to persons not residing on the premises, for storage of pleasure cars only; that the garage shall not exceed an area in excess of 31 ft. 6 in. by 28 ft.; that the walls and ceiling of the enclosed driveway and garage shall be fire-retarded in accordance with the rules of the board of standards and appeals and the floor laid in cement mortar on wire, reinforced; and that any openings in the garage portion shall be equipped with self-closing fireproof doors.

221-25-BZ.

APPLICANT—John J. Dunnigan, for Joseph Zimmerman and Abraham Mitchel, owners.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles.

PREMISES AFFECTED—166-172 South 1st street, Brooklyn.

APPEARANCES—

For Applicant: John J. Dunnigan.

For Opposition: Oscar Ross, Michael Grossman, Ida M. Schectman and Jacob Wasser.

ACTION OF BOARD—Application granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison, Holland and Connell 6

Negative 0

Absent: Fire Chief Kenlon 1

THE RESOLUTION:

(221-25-BZ)

WHEREAS, John J. Dunnigan, for Joseph Zimmerman and Abraham Mitchel, owners, filed, February 21, 1925, an application, under the building zone resolution, to permit in a business district the erection and maintenance of a garage for the storage of more than five motor vehicles; premises 166-172 South 1st street, Brooklyn; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its regular meeting, June 16, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that South 1st street, Driggs avenue and Bedford avenue are business districts; and

WHEREAS, the decision of the superintendent of buildings, rendered February 3, 1925, in acting on App. No. 1291-25, reads:

"The following objections have been filed by the examiners:

"Proposition contrary to the Zone Resolution, Art. II, Sec. 4 (a) 15. A public garage for more than five motor vehicles in a business district.";

and

WHEREAS, the proposed building is to be of non-fireproof construction, one story in height, with a frontage of 72 ft. and a depth of 100 ft.; to be occupied as a garage for the storage of more than five motor vehicles; and

WHEREAS, the applicant established his basis of appeal under section 7-c, and that the structure is now occupied as a non-conforming use in business district, the board deemed that it would be a hardship not to grant an adjustment in this case, with such restrictive conditions as will safeguard neighboring properties.

Resolved, that the board of appeals does hereby make a variation in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is granted on condition that the building be restricted in height to a one-story structure of flat roof design and construction; that the rear and gable walls shall be unpierced throughout their entire height and length; that any skylights installed shall be glazed with plain glass protected with wire guards above and below; that there shall be no roof signs erected or maintained, and there shall be no signs or advertising display on the premises other than one electric projecting sign on street front indicating the title of the business; that any gasoline storage equipment installed shall be limited to one tank of a capacity not exceeding 550 gallons, located at the easterly end of the building at the street front; that the interior of the structure shall be fire-retarded throughout in accordance with the rules of the board of standards and appeals; that the front elevation shall be finished in face brick with architectural terra cotta or stone trimmings; and that all permits necessary for the prosecution of the work shall be obtained within nine months and the building completed within one year from the date of this action.

110-25-BZ.

APPLICANT—Edward P. Doyle, for Brechler Building Corporation, owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles.

PREMISES AFFECTED—Southeast corner of Washington avenue and Fifth avenue, Long Island City, Borough of Queens.

APPEARANCES—

For Applicant: Edward P. Doyle.

For Opposition: Marie Ennella, Angela Coniola and Francis Delantro.

ACTION OF BOARD—Report of committee adopted; application denied.

THE VOTE TO GRANT—

Affirmative: Messrs. Dowd, Gunnison and Holland 3
Negative: Chairman Walsh, Messrs. Kennedy and Connell 3
Absent: Fire Chief Kenlon 1

THE RESOLUTION:

(110-25-BZ)

WHEREAS, Edward P. Doyle, for Brecher Building Corp., owner, filed, January 26, 1925, an application, under the building zone resolution, to permit in a business district the erection and maintenance of a garage for the storage of more than five motor vehicles; premises southeast corner Washington avenue and Fifth avenue, Borough of Queens; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its regular meeting, June 16, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Washington avenue is a business district to a point 100 ft. east of Fifth avenue and easterly therefrom is an unrestricted district and Fifth avenue is a business district to a point 100 ft. south of Washington avenue and southerly therefrom is an unrestricted district; and

WHEREAS, the decision of the superintendent of buildings, rendered January 17, 1925, in acting on N. B. App. No. 286, reads:

"1. The erection of a garage for more than five motor vehicles in a business district is contrary to Art. 2, Sect. 4 of Zone Law.";

and

WHEREAS, the proposed building is to be of non-fireproof construction, one story in height, with a frontage of 42.56 ft. and a depth of 100.1 ft.; all to be occupied as a garage for the storage of more than five motor vehicles; and

WHEREAS, a committee of the board inspected the premises under appeal and recommended denial of the application, applicant having failed to sustain his basis of appeal on the ground of hardship under section 21, and there was opposition on the part of affected property owners.

Resolved, that the decision of the superintendent of buildings be and it hereby is *affirmed*, and the application be and it hereby is *denied*.

324-25-BZ.

APPLICANT—Eugene De Rosa, for Small's Queens Circuit, Inc., owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a residence district extending from a business district the erection and maintenance of a building to be used as a motion picture theatre.

PREMISES AFFECTED—West side Junction boulevard, 88 feet 8¾ inches north of Roosevelt avenue, Elmhurst, Borough of Queens.

APPEARANCES—

For Applicant: Alexander J. McManus.
For Opposition: None.

ACTION OF BOARD—Application granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison, Holland and Connell 6
Negative 0
Absent: Fire Chief Kenlon 1

THE RESOLUTION:

(324-25-BZ)

WHEREAS, Eugene DeRosa, for Small's Queens Circuit Inc., owner, filed, March 26, 1925, an application, under the building zone resolution, to permit the extension from a business district into a residence district of a proposed building to be used as a motion picture theatre; premises west side of Junction boulevard, 88 ft. 8¾ in. north of Roosevelt avenue, Borough of Queens; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its regular meeting, June 16, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Junction boulevard and Roosevelt avenue are business districts and Warren street is a residence district; and

WHEREAS, the decision of the superintendent of buildings, rendered March 16, 1925, in acting on N. B. App. No. 2452-25, reads:

"Erection of a theatre to be erected partly in a residence district is prohibited by the Zoning Law.";

and

WHEREAS, the proposed building is to be of fireproof construction, one story and mezzanine in height, with a frontage of 38 ft. on Junction boulevard, 70 ft. on Warren street and a depth of 196 ft. 75⅞ in.; to be occupied as a motion picture theatre with one balcony an irregular area, approximately 21 ft. in depth in north side of premises is in the residence area; and

WHEREAS, applicant established his basis of appeal under section 7-b and the board deemed the variation requested a mere technicality, and that it would be a hardship to deny the variation of the zoning regulation under the conditions in this case.

Resolved, that the board of appeals does hereby *make a variation* in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is *granted on condition* that the regulations of the building zone resolution be complied with in all other respects, and that all permits necessary for the prosecution of the work shall be obtained within nine months and the building completed within eighteen months from the date of this action.

319-25-BZ.

APPLICANT—Hector McG. Curren, for Melchior Lenke, owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles.

PREMISES AFFECTED—South side of Germania place, 150 feet west of Nostrand avenue, Brooklyn.

THE RESOLUTION:

(319-25-BZ)

WHEREAS, Hector McG. Curren, for Melchior Lenke, owner, filed, March 25, 1925, an application, under the building zone resolution, to permit in a business district the erection and maintenance of a garage for the storage of more than five motor vehicles; premises south side of Germania place, 150 ft. west of Nostrand avenue, Brooklyn; and

MINUTES

WHEREAS, a public hearing was held on this application the board of appeals, at its regular meeting, June 16, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Germania place, Nostrand avenue and Amersfort place are business districts; and

WHEREAS, the decision of the superintendent of buildings, rendered September 12, 1924, in acting on Application No. 304-24, reads:

"Proposition contrary to the Zone Resolution, Art. II, Sec. 4. A garage for more than five motor vehicles in a business district.";

WHEREAS, the proposed building is to be of non-fireproof construction, one story in height, with a frontage of 85 ft. and a depth of 100 ft.; to be occupied as a garage for the storage of more than five motor vehicles; and

WHEREAS, applicant failed to file any consents establishing a basis of appeal under section 7-g, and there was vigorous opposition to the granting of the application on the part of property owners within the affected area.

Resolved, that the decision of the superintendent of buildings be and it hereby is affirmed, and the application be and it hereby is denied.

36-25-BZ.

APPLICANT—Joseph Goldstein, for Isaac Pinsky, owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a residence district the erection and maintenance of a building to be used for manufacturing carbonated beverages and a garage for the storage of one commercial motor vehicle.

PREMISES AFFECTED—28-30 Malta street, Brooklyn.

APPEARANCES—

For Applicant: Eugene Schwartz.

For Opposition: None.

ACTION OF BOARD—Application denied.

THE VOTE TO GRANT—

Affirmative 0

Negative: Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison, Holland and

Connell 6

Absent: Fire Chief Kenlon 1

THE RESOLUTION:

(386-25-BZ)

WHEREAS, Joseph Goldstein, for Isaac Pinsky, owner, filed, April 9, 1925, an application, under the building zone resolution, to permit in a residence district the erection and maintenance of a building to be used for manufacturing carbonated beverages and also as a garage for the storage of one commercial motor vehicle; premises 28-30 Malta street, Brooklyn; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its regular meeting, June 16, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Malta street is a residence district and New Lots avenue and Williams avenue are business districts; and

WHEREAS, the decision of the superintendent of buildings, rendered January 8, 1925, in acting on Application No. 25310-24, reads:

"Proposed change of occupancy in a residential district, from a private garage and private stable to a factory for the manufacture of carbonated water and a one-car business garage is contrary to Art. II, Sect. 3 of Building Zone Resolution.";

and

WHEREAS, the proposed building is to be of non-fireproof construction, one story in height, with a frontage of 40 ft. 7 in. and a depth of 20 ft.; to be occupied for the manufacture of carbonated beverages; and

WHEREAS, this application does not come within the provisions of exemption specified in section 7-d of the building zone resolution, and no testimony or evidence was produced to substantiate the basis of appeal under hardship, the board deemed a further invasion of this residence street unwarranted.

Resolved, that the decision of the superintendent of buildings be and it hereby is affirmed, and the application be and it hereby is denied.

Adjourned 2 p. m.

- THE RESOLUTION:
(257-25-S)
WHEREAS, Samuel Rosenblum, for Israel Lorberbaum, owner, filed, March 6, 1925, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in an order of the fire commissioner, affecting premises 435-7 Broadway, Brooklyn; and
WHEREAS, the order of the fire commissioner, dated May 24, 1925, reads:
"Order No. 59762-LD:
"1. Arrange the fire escape on the rear of building and the openings leading thereto and the windows opening on the course thereof so that same are in compliance with the provisions of Sections 273 and 274 of the Labor Law and the rules of the Board of Standards and Appeals, or carry out a proper alternative method of complying with the requirements of Section 271 of the Labor Law.
"Among the defects noted are the following:

MINUTES

"No fireproof passageway from termination of fire escape to street.";

WHEREAS, the building is non fireproof, four stories in height, 50 ft. by 90 ft. in area; OCCUPIED as a tenant factory; 1st story, stores, 5 persons; 2nd story, showroom, 10 persons; 3rd story, furniture manufacture, 15 persons, 4th story, knitting, 10 persons; equipped with a fire alarm system. EXITS: An interior wooden stairway extending from the 1st story to the roof, enclosed in wood metal covered partitions with wood metal covered doors at openings; a 60 degree fire escape on the rear of the building, extending from the roof to the yard, with egress from termination of fire escape by means of a 3 ft. opening in fence to yard at south; ROOFS of adjoining buildings are three stories lower at north and 4 ft. lower at south side; and

WHEREAS, the petitioner proposes to install an approved sprinkler system, has obtained consent from owner of premises adjoining at south to use yard as an exit, and contends that under such conditions the exits will be adequate.

Resolved, that the board of standards and appeals does hereby make a variation from the requirements of the labor law, and that the petition be and it hereby is granted, in so far as it affects egress from termination of the fire escape, on condition that a fire escape shall be maintained from the roof to the yard with egress from yard to adjoining yard of premises 439 Broadway, at the occupancy shall not exceed twenty-five (25) persons above the 2nd story engaged in manufacturing, and at the building shall be equipped with an approved sprinkler system; granted only so long as conditions otherwise to occupancy and use remain unchanged.

10-25-S.

PETITIONER—William P. Bannister, for Flintlock Realty Company, owner.

SUBJECT—Variation of labor law, as cited in orders of fire commissioner.

REMISES AFFECTED—9-11-13 Maiden lane, Manhattan.

APPEARANCES—

For Petitioner: William P. Bannister.

For Administration: Inspector Maher of fire department.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison, Connell, Holland, Fire Chief Kenlon, Superintendents Reville, Kleinert, Moore and McDermott 11

Negative: Superintendent Brady 1

Absent: Deputy Fire Commissioner Hannon... 1

THE RESOLUTION:

(180-25-S)

WHEREAS, Flintlock Realty Company, owner, filed, April 1, 1925, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in orders of the fire commissioner, affecting premises 9-11-13 Maiden lane, Manhattan; and

WHEREAS, the orders of the fire commissioner read:

"Order No. 68721-LD:

"Inspection shows the following to be necessary to make the above premises comply with the requirements of the Labor Law.

"1. Remove the substandard fire escape in court at west side of building or reconstruct same as per Section 274 of the Labor Law and Rule 3A, as amended by the Board of Standards and Appeals May 9th, 1924.

"Among the defects noted on this fire escape are the following:

"Windows on course not fireproof nor self-closing. No sign of any character shall be placed at openings leading to same. Must be maintained structurally safe and properly painted. No stairway from lowest bal-

cony to ground. No stairway from top balcony to roof.

"2. Provide an exterior screened iron stairway on the West side of building, as per Section 271 of the Labor Law, not less than 44 in. in width, extending from ground to roof, with a balcony on each floor and an independent means of egress from its lowest termination by means of an open court or courts or a fireproof passageway leading to the street, constructed as per Section 268 of the Labor Law, or carry out a proper alternative method of complying with the requirements of Section 271 of the Labor Law.

"3. Enclose the interior stairway at east side of building serving as a required means of exit, and the landings, platforms and passageways connecting therewith on all sides with partitions of fire resisting material extending continuously from the 1st story to 3 feet above the roof, constructed as per Section 271 of the Labor Law, or carry out a proper alternative method of complying with the requirements of Section 271 of the Labor Law.

"4. Provide continuous safe and unobstructed passageways at least 3 feet wide throughout their length leading directly to both required means of exit on all stories, as per Sections 271 and 272 of the Labor Law. This is to provide access for all occupants to both interior stairway and proposed exterior screened stairway at west side of building."

"Order No. 68722-LD:

"1. Provide exit signs, letters to be at least 8 in. in height, at all means of egress with a red light over all such exits for use in time of darkness, as per Section 272 of the Labor Law."

"Order No. 68723-LD:

"1. Arrange the entrance doors at street so as to open outwardly, as per Section 271 of the Labor Law."

"Order No. 70716-LF:

"1. Install an adequate interior electric fire alarm signal system in accordance with the rules of the Board of Standards and Appeals and the enclosed approved layout."

"Order No. 70717-LF:

"An inspection of the premises 9-13 Maiden lane, Borough of Manhattan, shows that a fire drill should be established and maintained therein according to the requirements of Section 279 of the Labor Law. The Labor Law specifically charges the Fire Commissioner with the duty of enforcing the provisions of the law, as to fire drills.

"This law also holds the owner of such premises responsible for the proper supervision and maintenance of fire drills. It is, therefore, your duty to organize and maintain a fire drill in the above premises in accordance with the rules and regulations of the Board of Standards and Appeals.

"A record of such drills, including the name and number of each certified drill conductor, engaged in conducting each drill, the date of each drill, and the number of persons taking part in each drill, shall be transmitted by you or your representative to this office semi-annually."

and

WHEREAS, the building is fireproof, 15 stories in height, 56.6 ft. by 77 ft. and 86.9 ft., irregular in area; OCCUPIED as a factory building with 344 persons, 27 of whom are employed at factory pursuits, 12 engravers, 6 polishers and 9 diamond setters. EXITS: An open interior fireproof stairway extending from the 1st story to the roof; a substandard fire escape in court at west side of building, extending from top story to roof of 1st story extension; ROOFS of adjoining buildings are 20 ft. lower at west and 30 ft. higher at east; and

WHEREAS, the petitioner agrees to reduce the occupancy to such an extent as will warrant the cancellation of all orders except extending the substandard fire escape to the roof, which he agrees to do.

MINUTES

Resolved, that the board of standards and appeals does hereby *make a variation* from the requirements of the labor law, and that the petition be and it hereby is *granted on condition* that not more than twenty-five (25) persons shall be engaged in manufacturing, limited to diamond setting, silver engraving and silver buffing, and that there shall be no open flames used in any part of the premises.

362-25-S.

PETITIONER—George & Edward Blum, for George-Ted Realty Corp., owner.

SUBJECT—Variation of labor law as cited in decision of superintendent of buildings.

PREMISES AFFECTED—231-239 West 29th street, Manhattan.

APPEARANCES—

For Petitioner: Arnold Wintner.

ACTION OF BOARD—Petition granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison, Connell, Holland, Fire Chief Kenlon, Superintendents Brady, Reville, Kleinert, Moore and McDermott

Negative

Absent: Deputy Fire Commissioner Hannon 1

THE RESOLUTION:

(362-25-S)

WHEREAS, George and Edward Blum, for George-Ted Realty Corp., owner, filed, April 2, 1925, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in a decision of the superintendent of buildings, affecting premises 231-239 West 29th street, Manhattan; and

WHEREAS, the decision of the superintendent of buildings, rendered March 28, 1925, reads:

"2. Window panes must not exceed 720 square inches in area. Section 264-7c, Labor Law."; and

WHEREAS, the building is fireproof, 14 stories in height, 117 ft. by 98 ft. in area. OCCUPIED: 1st story, stores; upper stories, offices, show rooms and 25 per cent manufacturing; and

WHEREAS, there are openings in the front of the building on the 1st, 2nd and 3rd stories, glazed with $\frac{1}{4}$ in. plate glass over 720 sq. in. in area; the maximum area of the glass on the 1st story being 12 ft. 8 in. by 8 ft. in height, on the 2nd story being 4 ft. 8 in. by 7 ft. in height and on the 3rd story being 4 ft. 8 in. by 6 ft. $2\frac{1}{2}$ in. in height; and

WHEREAS, petitioner contends that to comply with the labor law as to the area of the glass on the 1st, 2nd and 3rd stories would destroy the intended use of these stories and also would detract from the architectural effect of the building.

Resolved, that the board of standards and appeals does hereby *make a variation* from the requirements of the labor law, and that the petition be and it hereby is *granted*, only so far as it affects the windows of the front elevations on the three (3) lower stories, *on condition* that the windows shall be equipped with approved metal frames and sash, glazed with $\frac{1}{4}$ in. polished plate glass, and *granted on further condition* that the requirements of the labor law shall be complied with in all other respects.

163-25-S.

PETITIONER—Moore & Landsiedel, for Third Avenue Holding Co., owner.

SUBJECT—Variation of labor law as cited in order of fire commissioner.

PREMISES AFFECTED—4049 Third avenue, The Bronx.

APPEARANCES—

For Petitioner: L. B. Angelo.

For Administration: Inspector Maher of department.

ACTION OF BOARD—Petition denied.

THE VOTE TO GRANT—

Affirmative

Negative: Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison, Connell, Holland, Fire Chief Kenlon, Superintendent Brady, Reville, Kleinert, Moore and McDermott

Absent: Deputy Fire Commissioner Hannon

THE RESOLUTION:

(163-25-S)

WHEREAS, Moore & Landsiedel, for Third Avenue Holding Co., owner, filed, February 9, 1925, a petition, with the board of standards and appeals, from an order of the commissioner, affecting premises 4049 Third avenue, borough of The Bronx; and

WHEREAS, the order of the fire commissioner, dated August 7, 1924, reads:

"1. Provide an additional required means of egress on each floor of the building, remote from the existing stairway, preferably located on the west side of building, in accordance with Section 270 of the Labor Law.

"2. Extend the interior stairway at the north corner of the building to the roof, as per Section 270 of the Labor Law, said extension and the landings, passageways connecting therewith to be enclosed on all sides with partitions of fireproof material extending at least 3 ft. above the roof, as per Section 270 of the Labor Law.

"3. Enclose the interior stairway at the north corner of building, serving as a required means of egress and the landings, platforms, and passageway connecting therewith on all sides with partitions of fireproof material, extending continuously from the 1st story to 3 ft. above the roof, constructed as per Section 270 of the Labor Law.

"4. Remove the sub-standard fire-escape on west side of building; or reconstruct in accordance with Section 274 of the Labor Law, and provide proper egress at a point of safety satisfactory to the Fire Commissioner. Fire-escape shall be maintained structurally safe; properly painted. No sign of any character shall be placed at openings leading to this fire-escape."; and

WHEREAS, the building is non-fireproof, two stories in height, 115 ft. by 100 ft. in area. OCCUPIED: 1st story, furniture showroom, 5 persons; 2nd story tenant factory (portion vacant at present), 30 persons. EXITS: Two interior fireproof stairways, extending from 1st story to top story; enclosed in fireproof partitions with self-closing kalameined doors at openings; a sub-standard fire escape with gooseneck ladder to roof, on the rear of the building extending from 2nd story to yard; with EGRESS from the termination of fire escape by means of open court street; ROOFS of adjoining buildings are at same level; and

WHEREAS, petitioner contends that the existing means of egress are adequate.

Resolved, that the orders of the fire commissioner and they hereby are *affirmed*, and the petition be and hereby is *denied*.

Negative: Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison, Connell, Holland, Fire Chief Kenlon, Superintendents Brady, Reville, Kleinert, Moore and McDermott 12
Absent: Deputy Fire Commissioner Hannon 1

THE RESOLUTION:

(322-25-S)

WHEREAS, Elias B. Desatnek, owner, filed, March 25, 1925, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as set forth in an order of the fire commissioner, affecting premises 4-6 Varet street and 649-653 Broadway, Brooklyn; and WHEREAS, the order of the fire commissioner, dated March 15, 1925, reads:

"1. Extend the interior stairway at the east side of building to the roof, as per Section 271 of the Labor Law."

WHEREAS, the building is non-fireproof, four stories in height, 48 ft. 5½ in. by 43 ft. 3 in. average in depth, approximately 2,100 sq. ft. in area; OCCUPIED as a tenant factory; 1st story, stores; 2nd story, 6 persons; 3rd story, 6 persons; 4th story, 8 persons; equipped with a fire alarm system. EXITS: An interior wooden stairway extending from the 1st story to the top story, enclosed in wood partitions, metal covered on both sides, leading directly to street entrance, with fire doors at openings; stationary ladder to roof scuttle; a standard fire escape on the west side of the building; ROOFS of adjoining buildings are at same level at east and 20 ft. lower at west; and

WHEREAS, relief of the same order under Cal. No. 47-5 was granted by the board October 24, 1918, on the ground of a fire-resisting stair enclosure, whereas enclosure of wood, metal covered; and

WHEREAS, petitioner has reduced the occupancy to 19 persons above the 1st story, and requests this petition be granted.

Resolved, that the order of the fire commissioner be and hereby is affirmed, and the petition be and it hereby is granted.

322-25-S.
PETITIONER—Cross & Cross, for 584 Fifth Avenue Corporation, owner.

SUBJECT—Variation of labor law as cited in decision of superintendent of buildings.

PREMISES AFFECTED—1-11 West 47th street, Manhattan.

APPEARANCES—

For Petitioner: Charles Forstbauer.

ACTION OF BOARD—Petition granted on condition.

Negative 0
Absent: Deputy Fire Commissioner Hannon 1

THE RESOLUTION:

(323-25-S)

WHEREAS, Cross & Cross, for 584 Fifth Avenue Corporation, owner, filed, March 25, 1925, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in a decision of the superintendent of buildings, affecting premises 1-11 West 47th street, Manhattan; and

WHEREAS, the decision of the superintendent of buildings, rendered February 9, 1925, reads:

"6. Area of glass in front windows, 1st and 2nd floors is excessive."

WHEREAS, the building is fireproof, 12 stories in height, 150 ft. by 100 ft. 5 in. in area; OCCUPIED as a tenant factory, 25 per cent of floor area used for manufacturing, about 175 persons on each story; the maximum area of window glass on 1st story front to be 10 ft. 6 in. by 17 ft.; 2nd story front to be 9 ft. by 11 ft.; and

WHEREAS, petitioner requests relief as smaller size of glass would detract from the architectural design of the building.

Resolved, that the board of standards and appeals does hereby make a variation from the requirements of the labor law, and that the petition be and it hereby is granted, only so far as it affects the windows on the two (2) lower stories of the street front, on condition that all openings shall be equipped with approved metal frames glazed with ¼ in. polished plate glass, and granted on further condition that the requirements of the labor law shall be complied with in all other respects.

Negative 0
Absent: Deputy Fire Commissioner Hannon and Mr. Kennedy 2

THE RESOLUTION:

(346-25-S)

WHEREAS, A. M. Kelly, for Wallace & Co., lessee, filed, March 30, 1925, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in an order of the fire commissioner, affecting premises 91-103 Washington avenue, Brooklyn; and

WHEREAS, the order of the fire commissioner, dated March 9, 1925, reads:

"Order No. 73432-LD:

"1. Remove the substandard fire escape on the rear of the building or reconstruct same as per Section 274 of the Labor Law and Rule 3A as amended by the Board of Standards and Appeals May 9, 1924.

"Among the defects noted on this fire escape are the following: No stairway from top balcony to roof. Must be maintained structurally safe and properly painted. No sign of any character shall be placed at openings leading to same."

and

WHEREAS, the building is fireproof, six stories in height, faces on two streets, having a frontage of 128 ft. on Washington street and a frontage of 102 ft. on Park avenue; OCCUPIED as a candy factory, 112 persons above the 1st story; equipped with a sprinkler system. EXITS: Two interior fireproof stairways, extending from the 1st story to the roof, enclosed in fireproof partitions with fire doors at the openings; and also horizontal exits on each story to the building to the south; an exterior iron stairway, with fireproof openings along the course thereof on the rear of the building, with gooseneck ladder to the roof, extending from the top story balcony to courtyard, with egress from the termination of the exterior stairway by means of adjoining open yards; ROOF of building to the south is at same level; and

MINUTES

WHEREAS, petitioner contends that the building is provided with two remote interior fireproof stairways, extending from cellar to roof, as well as horizontal exits (on each story) to the the fireproof building to the south; that the structure is actually an exterior iron stairway and not a fire escape, and contends further that it was erected at a considerable cost, and that a compliance with the order would be a hardship.

Resolved, that the board of standards and appeals does hereby *make a variation* from the requirements of the labor law, and that the petition be and it hereby is *granted*, only so far as it affects the stairway from the top story balcony to roof, *on condition* that the order be complied with in all other respects.

395-25-S.

PETITIONER—Samuel Rosenblum, for Freheit Publishing Co., owner.

SUBJECT—Variation of labor law as cited in decision of superintendent of buildings.

PREMISES AFFECTED—30 Union square, Manhattan.

APPEARANCES—

For Petitioner: Samuel Rosenblum.

ACTION OF BOARD—Petition granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Dowd, Gunnison, Connell, Holland, Fire Chief Kenlon, Superintendents Brady, Reville, Kleinert, Moore and McDermott..... 11

Negative 0

Absent: Deputy Fire Commissioner Hannon and Mr. Kennedy 2

THE RESOLUTION:

(395-25-S)

WHEREAS, Samuel Rosenblum, for Freheit Publishing Co., owner, filed, April 11, 1925, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in a decision of the superintendent of buildings, affecting premises 30 Union square, Manhattan; and

WHEREAS, the decision of the superintendent of buildings, rendered March 24, 1925, reads:

"10. A safe and unobstructed means of egress must be provided from the foot of the fire escape to the street to conform with the requirements of Section 274 of the Labor Law."

and

WHEREAS, the building is non-fireproof, five stories in height, 25 ft. by 120 ft. in area at the 1st story and 25 ft. by 64 ft. in area above; OCCUPIED on the 1st story as a store and on the upper stories as a newspaper publishing establishment, 50 persons above the 1st story. EXITS: An interior fireproof stairway, extending from 1st story to roof; enclosed in fire-retarding partitions with fireproof doors at openings; a fire escape on the rear of the building, extending from the top story balcony to the roof of the 1st story extension; ROOFS of adjoining buildings, to north, five stories higher, to south, one story higher; and

WHEREAS, petitioner contends that the fire escape will be made to conform to all requirements excepting as to egress from termination, and proposes to provide in the open court to the north, an iron stair leading from the roof of the one-story extension to a platform at the window of the premises adjoining to the north (No. 32 Union square), with EGRESS direct through the store to street, and contends further that the owner of the adjoining premises has consented to permit this connection to be made.

Resolved, that the board of appeals does hereby *make a variation* from the requirements of the labor law, and that the petition be and it hereby is *granted*, only so far as it affects egress from termination of the fire escape, *on condi-*

tion that an approved fire escape shall be maintained in rear of the building, with a 45 degree fixed iron stairway from the roof of the 1st story extension to an iron balcony at 1st story level of adjoining building to the north, with egress therefrom to street, and *granted* only so long as conditions as to occupancy and use remain unchanged.

238-25-S.

PETITIONER—Erwin Rebafka, for Estate of Henry I. Barbey, owner.

SUBJECT—Variation of labor law as cited in order of fire commissioner.

PREMISES AFFECTED—35-37 East 10th street, Manhattan.

APPEARANCES—

For Petitioner: Erwin Rebafka.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Petition granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Dowd, Gunnison, Connell, Holland, Fire Chief Kenlon, Superintendents Brady, Reville, Kleinert, Moore and McDermott.....

Negative

Absent: Deputy Fire Commissioner Hannon and Mr. Kennedy

THE RESOLUTION:

(238-25-S)

WHEREAS, Erwin Rebafka, for Estate of Henry I. Barbey, owner, filed, February 27, 1925, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in an order of the fire commissioner, affecting premises 35-37 East 10th street, Manhattan; and

WHEREAS, the order of the fire commissioner, dated February 7, 1925, reads:

"Order No. 71948-LD:

"1. Arrange the fire escape at the front of building and the openings leading thereto and the windows opening on the course thereof so that same are in compliance with the provisions of Sections 273 and 274 of the Labor Law and the rules of the Board of Standards and Appeals * * *.

"NOTE: Among the defects noted on the fire escape are the following:

"No 45 degree stairways connecting balconies. No steps from floor to sills of openings on course. Panels of wire glass in fireproof windows opening on course have an area exceeding 720 square inches. No openings 2 ft. by 6 ft. provided."

and

WHEREAS, the building is non-fireproof, seven stories in height, 44 ft. by 95 ft. in area at the 1st story and 44 ft. by 85 ft. in area above. OCCUPIED: 1st story, sales room for importer and repair of cloaks, 12 persons; 2nd story, showroom, furniture, 5 persons; 3rd story, upholstery, 25 persons; 4th story, cutting and stockroom, 8 persons; 5th story, shipping and stockroom, 4 persons; 6th story, office, showroom and stock, cotton goods, 8 persons; 7th story, compact, 16 persons; EQUIPPED with a fire alarm signal system. EXITS: An interior wooden stairway, extending from the 1st story to the roof story, enclosed in fire resisting partitions with metal covered wooden doors at openings; a fire escape with fireproof windows along the course thereof, on the front of the building extending from the roof to the 2nd story balcony, with drop ladder in guides to street; ROOFS of adjoining buildings to east, 24 ft. lower; to west, 20 ft. higher; and

WHEREAS, petitioner contends that a similar order in 1919 was accepted as satisfactorily complied with when the fire escape was screened to a height of 4 ft. 6 in., and contends further that the occupancy above the 1st story

MINUTES

as been reduced from 100 in 1919 to 66 at present and re drills are conducted.

Resolved, that the board of standards and appeals does hereby *make a variation* from the requirements of the labor law, and that the petition be and it hereby is *granted* on condition that the stipulations of the action of the board of review of fire department of April 3, 1919, shall be complied with and maintained so long as conditions remain unchanged, and *on further condition* that a wet sprinkler system shall be installed in accordance with the rules of the board of standards and appeals.

47-25-S.
PETITIONER—Jean Jeaume, for Regnis Holding Corp., owner.

SUBJECT—Variation of labor law as cited in decision of superintendent of buildings.

PREMISES AFFECTED—34-38 East 19th street and 33-35 East 18th street, Manhattan.

APPEARANCES—

For Petitioner: Jean Jeaume.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Petition granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison, Connell, Holland, Fire Chief Kenlon, Superintendents Brady, Reville, Kleinert and Moore..... 11

Negative 0

Absent: Deputy Fire Commissioner Hannon and Superintendent McDermott..... 2

THE RESOLUTION:

(247-25-S)

WHEREAS, Jean Jeaume, for Regnis Holding Corp., owner, filed, March 3, 1925, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in a decision of the superintendent of buildings, affecting premises 34-38 East 19th street and 33-35 East 18th street, Manhattan; and

WHEREAS, the decision of the superintendent of buildings, rendered February 10, 1925, reads:

"With reference to application for certificate of occupancy we beg to advise you that the following objections must be removed before certificate may be issued:

"2—Fire escape on westerly side of 10 story section does not comply with Labor Law.

"3—Wire glass windows in fireproof partitions enclosing north stair (19th Street side) is unlawful.

"Your attention is also brought to Item 2.

"The fire escape at the westerly side of 10 story section was erected and accepted under Labor Department order dated March 14, 1916; item 3. The building below the 7th story then covered the entire area of lot and extended to Broadway on the westerly side, with an interior stairway at the southwest corner of Broadway side and an interior stairway and outside fire escape on the 19th Street side centrally located. Since above item was accepted as completed the building has been divided in two parts with a brick wall extending from cellar to roof, forming two separate buildings, the easterly one of which is covered in application attached hereto.

"With respect to exit facilities from the present 8th, 9th and 10th story section, conditions have not been materially changed and the question of accepting this is as a secondary means of exit is one of jurisdiction, which is vested with the Board of Standards and Appeals.

"Item 3—All openings to north stairway were required to be made fire resisting as per Labor Department letter of Aug. 4, 1916."

and

WHEREAS, the building has a frontage of 87 ft. 1 5-7 in. on East 19th street and a frontage of 47 ft. 7 in. on East 18th street, and is divided into two sections, one fireproof, ten stories in height, the other non-fireproof, seven stories in height; the means of egress consisting of an interior enclosed fireproof stairway in the ten-story section, extending from the 1st story to the 10th story, with scuttle and ladder to roof; an interior stairway in the seven-story section on the East 18th street front extending from the 1st story to the roof, enclosed in fire retarding partitions, with fireproof doors at the openings; a fire escape on the westerly side of the ten-story section, extending from the roof of the seven-story building to the roof of the ten-story building; the two sections are connected by large openings in the various stories; the entire premises being occupied by 141 persons; and

WHEREAS, petitioner contends that an alteration was made in the premises in 1924 which consisted of interior changes and the addition of an intermediate floor between the 1st and 2nd stories, without increasing the height of the building, that the occupancy was reduced; that the fire escape was erected under orders of the Labor Department in 1916 and approved June 9, 1917; that the openings in the north stairway are glazed with wire glass and were accepted by the fire department June 9, 1917; that the building was separated from the premises 880 Broadway by fireproof division wall in 1921, but this did not change existing conditions, and requests the acceptance of the existing means of egress as adequate.

Resolved, that the board of standards and appeals does hereby *make a variation* from the requirements of the labor law, and that the petition be and it hereby is *granted*, only so far as it affects the fire escape on the upper stories on the westerly gable wall on the 19th street end, *on condition* that the occupancy shall not exceed twenty-five (25) persons above the 7th story; *granted*, as to Item No. 3, *on condition* that the stipulations of the action of the board of review of the fire department February 26, 1919, shall be complied with, and *granted* only so long as conditions as to occupancy and use remain unchanged.

84-25-S.

PETITIONER—Julius Myer, owner.

SUBJECT—Variation of labor law as cited in order of fire commissioner.

PREMISES AFFECTED—10 Mangin street, Manhattan.

APPEARANCES—

For Petitioner: Julius Myer.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Petition granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison, Connell, Holland, Fire Chief Kenlon, Superintendents Brady, Reville, Kleinert and Moore..... 11

Negative 0

Absent: Deputy Fire Commissioner Hannon and Superintendent McDermott..... 2

THE RESOLUTION:

(84-25-S)

WHEREAS, Julius Myer, owner, filed, January 21, 1925, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in an order of the fire commissioner, affecting premises 10 Mangin street, Manhattan; and

WHEREAS, the order of the fire commissioner, dated February 8, 1922, reads:

"1. Arrange the fire escape on the front of building and the openings leading thereto and the windows opening on the course thereof so that same are in compliance with the provisions of Section 273 and 274 of the Labor Law and the rules of the Board of Standards

MINUTES

and Appeals, or carry out a proper alternative method of complying with the requirements of Section 271 of the Labor Law.

"NOTE:—Among the defects noted on this fire escape are the following:—Doors to balconies not self-closing. Door on 7th story, broken glass panel. No gooseneck ladder to roof. Not screened to a height of 4 ft. 6 ft. No 45 degree connecting stairway between balconies. No steps to sills of openings to balconies. Releasing device on counterbalanced stairway out of order. Fire escape in need of paint.

"ITEM 1 MODIFIED TO READ AS FOLLOWS:

"Accept the 60 degree angle at which connecting stairways of fire escape have been set, providing the following work is done.

"6. Provide a gooseneck ladder from top balcony of fire escape to roof.

"2. Enclose the interior stairway at the south side of building serving as a required means of exit, and the landings, platforms and passageways connecting therewith on all sides, with partitions of fire resisting material extending continuously from the 1st story to 3 feet above the roof, constructed as per Section 271 of the Labor Law or carry out a proper alternative method of complying with the requirements of Section 271 of the Labor Law. SEE NOTE:

"NOTE:—Not enclosed in fire resisting material from the 7th story to roof. Sheet metal on doors on all stories is defective. Doors do not open outwardly on some stories. The enclosure needs repairing on the 7th story.";

and

WHEREAS, the building is fireproof, seven stories in height, 25 ft. by 51 ft. 6 in. in area. OCCUPIED: 1st story, upholstery shop, 3 persons; 2nd story, manufacture of brooms; upper stories, manufacture of springs and storage, 23 persons above the 1st story; EQUIPPED with a fire alarm signal system. EXITS: An interior fireproof stairway extending from 1st story to top story; with iron ladder to scuttle in roof; enclosed in fire resisting partitions, from the 1st to 7th story; the 7th story enclosure being constructed of galvanized iron with fireproof doors at openings; a fire escape, with fireproof windows along the course thereof, on the front of the building, extending from the top story to the 2nd story balcony, with counterbalanced drop ladder to street; ROOFS of adjoining buildings, to north, one story lower; to south, four stories lower; and

WHEREAS, petitioner contends that practical difficulties—the bulkhead of the elevator shaft—prevent the installation of the gooseneck ladder to roof, and that the enclosure on the 7th story was accepted, prior to 1916, by the department of labor.

Resolved, that the board of standards and appeals does hereby make a variation from the requirements of the labor law, and that the petition be and it hereby is granted, as to Item No. 1, only so far as it affects the angle of the stairways, on condition that 60 degree stairways be provided from the 2nd story to the roof, all other defects to be complied with; granted, as to Item No. 2, on condition that the stair enclosure be carried to the underside of the roof beams and all openings therein be equipped with self-closing fireproof doors.

233-25-S.

PETITIONER—Lanman & Kemp, Inc., lessee.

SUBJECT—Variation of labor law as cited in order of fire commissioner.

PREMISES AFFECTED—20 Beekman street, Manhattan.

APPEARANCES—

For Petitioner: J. R. Noggle.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Petition granted on condition.

CONDITIONS—As specified in resolution.
THE VOTE—

Affirmative: Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison, Connell, Holland, Superintendents Brady, Reville, Kleinert and Moore

Negative

Absent: Fire Chief Kenlon, Deputy Fire Commissioner Hannon and Superintendent McDermott

THE RESOLUTION:

(233-25-S)

WHEREAS, Lanman & Kemp, Inc., for M. H. Kemp, owner, filed, February 25, 1925, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in an order of the fire commissioner, affecting premises 20 Beekman street, Manhattan; and

WHEREAS, the order of the fire commissioner, dated December 6, 1924, reads:

"Order No. 69435-LD:

"1. Arrange the fire escape on the front of building and the openings leading thereto and the window opening on the course thereof so that same are in compliance with the provisions of Sections 273 and 274 of the Labor Law * * *.

"NOTE: Among the defects noted are the following: Windows on course not fireproof, self-closing. No counterbalanced stair from lowest balcony to ground.

"2. Extend the interior stairway at the east side of building to the roof, as per Section 271 of the Labor Law.";

and

WHEREAS, the building is non-fireproof, five stories in height, 21 ft. by 79 ft. in area at the 1st story and 21 ft. by 70 ft. in area above; OCCUPIED for the bottling of proprietary medicines and toilet waters; 1st story, 8 persons; 2nd story, 11 persons; 3rd story, 1 person; upper stories, no occupants. EXITS: An interior wooden stairway extending from the 1st story to the top story with iron ladder to scuttle in the roof, enclosed in wooden partitions with wooden doors at the openings; a fire escape on the front of the building, extending from the top story to the 1st story balcony, with drop ladder to street, and also an iron bridge from the 1st story extension roof at rear to the adjoining extension roof; ROOFS of adjoining buildings, to east, 8 ft. lower; to west, 10 ft. higher; and

WHEREAS, petitioner contends that there are only three persons employed above the 2nd story, and contends further that the existing means of exit are adequate for the low occupancy.

Resolved, that the board of standards and appeals does hereby make a variation from the requirements of the labor law, and that the petition be and it hereby is granted, as to Item No. 1, only so far as it affects the fireproof windows, on condition that the fire escape shall conform with the requirements in all other respects; granted, as to Item No. 2, on condition that a fixed double rung iron ladder shall be provided from the top story to a counterbalanced scuttle in roof, and that occupancy be limited to not more than two persons above the 2nd story.

APPLIANCES SUBMITTED FOR APPROVAL.

340-25-SA.

PETITIONER—Walter Pfaendler, for McCann-Harrison Corporation.

SUBJECT—Approval of McCann-Harrison Low Pressure Oil Burner.

APPEARANCES—None.

ACTION OF BOARD—Petition placed on reserve calendar subject to chairman's determination, as to going to Tarrytown for an inspection.

MINUTES

231-20-SA.
PETITIONER—Fire & Gas Appliance Co. of New York, Inc.
SUBJECT—Changing of name of Healy Gas Shut-Off Valve.
APPEARANCES—None.
ACTION OF BOARD—Name of appliance changed.
THE VOTE TO CHANGE NAME OF APPLIANCE—
Affirmative: Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison, Connell, Holland, Superintendents Brady, Reville, Kleinert and Moore 10
Negative 0
Absent : Fire Chief Kenlon, Deputy Fire Commissioner Hannon and Superintendent McDermott 3

THE RESOLUTION:
(231-20-S)
WHEREAS, J. F. Healy filed, March 18, 1920, a petition, with the board of standards and appeals, for approval of a device known as the Safety Gas Cut-Off Valve (Star Gas Shut-Off Valve); and
WHEREAS, a committee of the board examined said device and recommended that the approval be granted; and
WHEREAS, this device was approved by the board at its meeting May 11, 1920, under the name of the Safety Gas Cut-Off Valve, and petitioner wishes to change the name to the Star Gas Shut-Off Valve, the name by which it is known to the trade.
Resolved, that the board of standards and appeals does hereby *approve* the device known as the Star Gas Shut-Off Valve, constructed in accordance with plans and model submitted to this board.
Adjourned 5.05 p. m.
WILLIAM J. O'GORMAN, *Secretary*.

MINUTES

BOARD OF APPEALS

*CORRECTION.

The minutes of the meeting of the board of appeals held Tuesday, March 31, 1925, as they appeared in Bulletin No. 14, Vol. X, are hereby corrected to read as follows:

1167-24-A.
APPELLANT—E. H. Gibson, for Gulf Refining Co., owner.

**Correction—Words "Appellant—E. H. Gibson, for Gulf Refining Co., owner," added 1st line.*

SUBJECT—Appeal from decision of fire commissioner.
PREMISES AFFECTED—East side Zerega avenue, from Chatterton to Blackrock avenue, The Bronx
APPEARANCES—None.
ACTION OF BOARD—Plans approved.
THE VOTE TO APPROVE PLANS—
Affirmative: Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison, Connell and Holland 6
Negative 0
Absent: Fire Chief Kenlon 1

MINUTES

BOARD OF APPEALS

*CORRECTION.

The minutes of the meeting of the board of appeals held Tuesday, June 2, 1925, as they appeared in Bulletin No. 23, Vol. X, are hereby corrected to read as follows:

(1426-24-A)

WHEREAS, William F. Doyle, for Mrs. Theresa D. Brown-ing, owner, filed, December 3, 1924, an appeal, with the board of appeals, from an order of the fire commissioner, affecting premises 2121-2129 Broadway and 227-229 West 74th street, Manhattan; and

WHEREAS, the order of the fire commissioner, dated August 7, 1924, reads:

"Order No. 63036-F:

"1. Install a standpipe system with risers 4 in. in diameter tested to withstand a pressure of 300 lbs. per square inch, extending from cellar to roof, with necessary check-valves and 2½ inch regulation fire department outlets on each story (including basements, cellars and roofs), placed within main stairway enclosure.

**Correction—"1426-25-A," first line, changed to "1426-24-A."*

Each outlet to be provided with sufficient feet of 2½ inch standard hose attached thereto.";

and

WHEREAS, the building is non-fireproof, 4 stories (50 ft.) in height, having a frontage of 91 ft. on Broadway and a frontage of 143 ft. on West 74th street; an approximate area of 10,575 sq. ft., OCCUPIED 1st story, restaurant, 2nd and 3rd stories factory, dressmaking and millinery; 4th story, billiard club—approximately 166 persons above the 1st story; and

WHEREAS, appellant contends that the building is low in height, faces on two streets, is equipped with an interior fire alarm system, with a direct communication to fire headquarters, and in view of the fact that the premises will be demolished in two years, requests that the order be held in abeyance until that time.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted on condition* that not less than eight (8) approved 2½-gallon fire extinguishers shall be provided and maintained in each story; that all legal exits required shall be maintained; that the occupancy and use shall remain unchanged; and *granted* only for a period of two years from the date of this action.

RULES

COVERING THE DESIGN OF REINFORCED CONCRETE FLAT SLABS.

Adopted by the Board of Standards and Appeals, July 8, 1920, under Cal. 395-20-S.

Rule 1. Application. The rules governing the design of reinforced concrete flat slabs shall apply to such floors and roofs, consisting of three or more rows of slabs, without beams or girders, supported on columns, the construction being continuous over the columns and forming with them a monolithic structure.

Rule 2. Compliance with Building Code. In the design of reinforced concrete flat slabs, the provisions of article 16 of the building code shall govern with respect to such matters as are specified therein.

Rule 3. Assumptions. In calculations for the strength of reinforced concrete flat slabs, the following assumptions shall be made:

- (a) A plane section before bending remains plane after bending;
- (b) The modulus of elasticity of concrete in compression within the allowable working stresses is constant;
- (c) The adhesion between concrete and reinforcement is perfect;
- (d) The tensile strength of concrete is nil;
- (e) Initial stress in the reinforcement due to contraction or expansion in the concrete is negligible.

Rule 4. Stresses. (a) The allowable unit shear in reinforced concrete flat slabs on the bd section around the perimeter of the column capital shall not exceed one hundred twenty (120) pounds per square inch; and the allowable unit shearing stress on the bjd section around the perimeter of the drop shall not exceed sixty (60) pounds per square inch, provided that the reinforcement is so arranged or anchored that the stress may be fully developed for both positive and negative moments.

(b) The extreme fibre stress to be used in concrete in compression at the column head section shall not exceed seven hundred fifty (750) pounds per square inch.

Rule 5. Columns. For columns supporting reinforced concrete flat slabs, the least dimension of any column shall be not less than one-fifteenth ($1/15$) of the average span of any slabs supported by the columns; but in no case shall such least dimension of any interior column supporting a floor or roof be less than sixteen (16) inches when round nor fourteen (14) inches when square; nor shall the least dimension of any exterior column be less than fourteen (14) inches.

Rule 6. Column Capital. Every reinforced concrete column supporting a flat slab shall be provided with a capital whose diameter is not less than 0.225 of the average span of any slabs supported by it. Such diameter shall be measured where the vertical thickness of the capital is at least one and one-half ($1\frac{1}{2}$) inches, and shall be the diameter of the inscribed circle in that horizontal plane. The slope of the capital considered effective below the point where its diameter is measured shall nowhere make an angle with the vertical of more than forty-five (45) degrees. In case a cap of less dimensions than hereinafter described as a drop, is placed above the column capital, the part of this cap enclosed within the lines of the column capital extended upward to the bottom of the slab or drop at the slope of forty-five (45) degrees may be considered as part of the column capital in determining the diameter for design purposes.

Rule 7. Drop. When a reinforced concrete flat slab is thicker in that portion adjacent to or surrounding the

column, the thickened portion shall be known as a drop. The width of such drop when used, shall be determined by the shearing stress in the slab around the perimeter of the drop, but in no case shall the width be less than 0.33 of the average span of any slabs of which it forms a part. In computing the thickness of drop required by the negative moment on the column head section, the width of the drop only shall be considered as effective in resisting the compressive stress, but in no case shall the thickness of such drops be less than 0.33 of the thickness of the slab. Where drops are used over interior columns, corresponding drops shall be employed over exterior columns and shall extend to the one-sixth ($1/6$) point of the panel from the center of the column.

Rule 8. Slab Thickness. The thickness of a reinforced concrete flat slab shall be not less than that derived by the formulae $t = 0.024 L \sqrt{w} + 1\frac{1}{2}$ for slabs without drops, and $t = 0.02 L \sqrt{w} + 1$ for slabs with drops, in which t is the thickness of the slab in inches, L is the average span of the slab in feet, and w is the total live and dead load in pounds per square foot; but in no case shall this thickness be less than one-thirty-second ($1/32$) of the average span of the slab for floors, nor less than one-fortieth ($1/40$) of the average span of the slab for roofs, nor less than six (6) inches for floors nor less than five (5) inches for roofs.

Rule 9. Reinforcement. (a) In the calculation of moments at any section, all the reinforcing bars which cross that section may be used, provided that such bars extend far enough on each side of such section to develop the full amount of the stress at that section. The effective area of the reinforcement at any moment section shall be the sectional area of the bars crossing such section multiplied by the sine of the angle of such bars with the plane of the section. The distribution of the reinforcement of the several bands shall be arranged to fully provide for the intermediate moments at any section.

(b) Splices in bars may be made wherever convenient but are preferably at points of minimum stress. The length of any splice shall be not less than eighty (80) bar diameters and in no case less than two (2) feet. The splicing of adjacent bars shall be avoided as far as possible. Slab bars which are lapped over the column, the sectional area of both being included in the calculation for negative moment, shall extend to the lines of inflection beyond the column center.

(c) When the reinforcement is arranged in bands, at least fifty (50) per cent of the bars in any band shall be of a length not less than the distance center to center of columns measured rectangularly and diagonally; on bars used as positive reinforcement shall be of a length less than half ($1/2$) the panel length plus forty (40) bar diameters for cross bands, or less than seven-tenths ($7/10$) of the panel length plus forty (40) bar diameters for diagonal bands and no bars used as negative reinforcement shall be of a length less than half ($1/2$) the panel length. All reinforcement framing perpendicular to the wall in exterior panels shall extend to the outer edge of the panel and shall be hooked or otherwise anchored.

(d) Adequate means shall be provided for properly maintaining all slab reinforcement in the position assumed by the computations.

Rule 10. Line of Inflection. In the design of reinforced concrete flat slab construction, for the purpose of making calculations of the bending moments at sections other than defined in these rules, the line of inflection

RULES

shall be considered as being located one-quarter ($\frac{1}{4}$) the distance, center to center, of columns, rectangularly and diagonally, from center of columns for panels without drops, and three-tenths ($\frac{3}{10}$) of such distance for panels with drops.

Rule 11. Moment Sections. For the purpose of design of reinforced concrete flat slabs, that portion of the section across a panel, along a line midway between columns, which lies within the middle two quarters of the width of the panel shall be known as the inner section, and those portions of the section in the two outer quarters of the width of the panel shall be known as the outer sections. Of the section which follows a panel edge from column to column and which includes the quarter perimeters of the edges of the column capitals, that portion within the middle two quarters of the panel width shall be known as the mid section and the two remaining portions, each having a projected width equal to one-quarter of the panel width, shall be known as the column head sections.

Rule 12. Bending Moments. In the design of reinforced concrete flat slabs the following provisions with respect to bending moments shall be observed. In the moment expressions used:

W is the total dead and live load on the panel under consideration, including the weight of drop whether a square, rectangle or parallelogram;

W_1 is the total live load on the panel under consideration;

L is the length of side of a square panel center to center of columns; or the average span of a rectangular panel which is the mean length of the two sides;

n is the ratio of the greater to the less dimension of the panel;

h is the unsupported length of a column in inches, measured from top of slab to base of capital;

I is the moment of inertia of the reinforced concrete column section.

A. Interior Square Panels. The numerical sum of the positive and negative moments shall be not less than $\frac{1}{17} W L$. A variation of plus or minus five (5) per cent shall be permitted in the expression for the moment on any section, but in no case shall the sum of the negative moments be less than sixty-six (66) per cent of the total moment, nor the sum of the positive moments be less than thirty-four (34) per cent of the total moment for slabs with drops; nor shall the sum of the negative moments be less than sixty (60) per cent of the total moment, nor the sum of the positive moments be less than forty (40) per cent of the total moment for slabs without drops.

1. In *two-way systems*, for slabs with drops, the negative moment resisted on two column head sections shall be $-\frac{1}{32} W L$; the negative moment on the mid section shall be $-\frac{1}{133} W L$; the positive moment on the two outer sections shall be $+\frac{1}{80} W L$ and the positive moment on the inner section shall be $+\frac{1}{133} W L$; and for slabs without drops, the negative moment resisted on two column head sections shall be $-\frac{1}{36} W L$, the negative moment on the mid section shall be $-\frac{1}{133} W L$, the positive moment on the two outer sections shall be $+\frac{1}{63} W L$ and the positive moment on the inner section shall be $+\frac{1}{133} W L$.

2. In *four-way systems*, the negative moments shall be as specified for Two-Way Systems; the positive moment on the two outer sections shall be $+\frac{1}{100} W L$ and the positive moment on the inner section shall be $+\frac{1}{100} W L$ for slabs with drops; and the positive moment on the two outer sections shall be $+\frac{1}{174} W L$, and the positive moment on the inner section shall be $+\frac{1}{100} W L$, for slabs without drops.

3. In *three-way systems*, the negative moment on the column head and mid sections and the positive moment on the two outer sections, shall be as specified for Four-Way Systems. In the expression for the bending moments on the various sections, the length L shall be assumed as the distance center to center of columns and the load W as the load on the parallelogram panel.

B. Interior Rectangular Panels.

1. When the ratio n does not exceed 1.1, all computations shall be based on a square panel of a length equal to the average span, and the reinforcement shall be equally distributed in the short and long directions according to the bending moment coefficients specified for interior square panels.

2. When the ratio n lies between 1.1 and 1.33, the bending moment coefficients specified for interior square panels shall be applied in the following manner:

(a) In *two-way systems*, the negative moments on the two column head sections and the mid section and the positive moment on the two outer sections and the inner section at right angles to the long direction shall be determined as for a square panel of a length equal to the greater dimension of the rectangular panel; and the corresponding moments on the sections at right angles to the short direction shall be determined as for a square panel of a length equal to the lesser dimension of the rectangular panel. In no case shall the amount of reinforcement in the short direction be less than two-thirds ($\frac{2}{3}$) of that in the long direction. The load W shall be taken as the load on the rectangular panel under consideration.

(b) In *four-way systems*, for the rectangular bands, the negative moment on the column head sections and the positive moment on the outer sections shall be determined in the same manner as indicated for *two-way systems*.

For the diagonal bands the negative moments on the column head and mid sections and the positive moment on the inner section shall be determined as for a square panel of a length equal to the average span of the rectangle. The load W shall be taken as the load on the rectangular panel under consideration.

(c) In *three-way systems*, the negative and positive moments on the bands running parallel to the long direction shall be determined as for a square whose side is equal to the greater dimension; and the moments on the bands running parallel to the short direction shall be determined as for a square whose side is equal to the lesser dimension. The load W shall be taken as the load on the parallelogram panel under consideration.

C. Exterior Panels. The negative moments at the first interior row of columns and the positive moments at the center of the exterior panels on moment sections parallel to the wall, shall be increased twenty (20) per cent over those specified above for interior panels. The negative moment on moment sections at the wall and parallel thereto shall be determined by the conditions of restraint, but the negative moment on the mid section shall never be considered less than fifty (50) per cent and the negative moment on the column head section never less than eighty (80) per cent of the corresponding moments at the first interior row of columns.

D. Interior Columns shall be designed for the bending moments developed by unequally loaded panels, eccentric loading or uneven spacing of columns. The bending moment resulting from unequally loaded panels shall be considered as $\frac{1}{40} W_1 L$, and shall be resisted

(Continued on page 778)

PUBLIC HEARING

PROPOSED AMENDMENTS TO RULES GOVERNING FIRE EXTINGUISHING APPLIANCES— SPRINKLER SYSTEMS.

[77-25-SR]

NOTICE IS HEREBY GIVEN that a public hearing will be held by the Board of Standards and Appeals on Friday, June 26, 1925, at 2 p. m., Room 1013, Municipal Building, on proposed amendments to Rules for Fire Extinguishing Appliances, Sprinkler Rules.

General Requirements. The rules contained herein cover the general details of a sprinkler equipment only. Before an equipment is installed or before a present equipment is remodeled, complete working plans should be submitted for approval to Fire Department.

These plans shall be drawn to an indicated scale; give correct address and points of compass; show sectional elevations of the building; and the essential features of the construction, viz., size, location and direction of joists, timbers or other structural members. They shall also indicate the location and size of water supplies, connecting pipes, feed mains and risers, gate, check, alarm and dry-pipe valves, as well as the location, spacing, number and type of sprinklers.

Upon approval of preliminary plans such number of sets of clean, corrected plans on cloth as the Fire Commissioner may require, not exceeding three (3), shall be filed for final approval of the Fire Commissioner. A certified copy of the approved plans shall be forwarded to the Bureau of Buildings by the Bureau of Fire Prevention. Such application and specification forms as may be prescribed by the Fire Commissioner shall accompany preliminary plans. If a standpipe (fire line) equipment is provided throughout the building, the plans shall include a note to that effect.

When entirely completed in accordance with the approved plans and as per test herein provided for, application shall be made to the Bureau of Fire Prevention for inspection of the completed installation. When the sprinkler equipment is approved the applicant will be so advised in writing by the Bureau of Fire Prevention.

All sprinkler equipments shall be installed in a thoroughly workmanlike manner.

Rule 1. Definition of Automatic Extinguisher Systems. Automatic extinguisher systems shall consist of a system of piping connected to one or more acceptable sources of water supply, or other extinguishing medium, provided with distributing devices so arranged and located as to discharge and diffuse automatically under the action of heat an effective stream or spray over every part of the interior of the building area in which a fire may start or to which it may be communicated.

Rule 2. Classification of Sprinkler Systems. For the purpose of these rules, sprinkler systems shall be classified as:

(a) Automatic Wet Pipe Systems, in which all pipes and sprinkler heads are at all times filled with water;

(b) Automatic Dry Pipe Systems, in which the pipes and sprinkler heads are filled with air, either compressed or at atmospheric pressure, and the water supply is operated by a Dry Pipe Valve as defined in Rule 27 of these Rules.

(c) Non-Automatic Systems, in which all pipes and sprinkler heads are maintained dry with a fire department connection for water supply.

Thermostatic fire alarm with direct connection to Central Office or Fire Department Headquarters shall be provided in connection with all non-automatic sprinkler systems.

Rules 3. Approved Devices. Automatic Sprinklers and accessory appliances shall include all devices approved as such by the Bureau of Standards, Washington, D. C.; by the Underwriters' Laboratories, Inc., of Chicago; by the Associated Factory Mutual Laboratories of Boston; and all devices which meet the tests prescribed by the Board of Standards and Appeals.

Rule 4. Water Supply. Approved sources of water supply shall be classified as Automatic and Auxiliary.

(a) Automatic Sources shall include the Gravity Tank, the Pressure Tank, [and] the Public Water System, and the Automatic Electric Fire Pump, installed as required under the provisions of Rule 8, hereinafter provided for.

b) Auxiliary Sources shall include the non-automatic Fire Pump and the Fire Department Connection.

Rule 5. Gravity Tank. Gravity tanks shall contain an available quantity of water sufficient to supply twenty-five per cent (25%) of the number of sprinkler heads in the average protected fire area for twenty (20) minutes, but not less than 5,000 gallons; and the bottom of the tank shall have an elevation of not less than twenty (20) feet above the highest line of sprinklers below the main roof. When the area of a pent house exceeds 2,500 sq. ft. the bottom of the tank shall be required to be not less than 20 feet above the highest line of sprinklers below the pent house roof, but where a pent house contains only pressure tanks this rule will not apply.

Where a tank capacity in excess of [25,000] 30,000 gallons is required by this rule, the amount of water to be provided in excess of [25,000] 30,000 gallons shall be specified by the Board of Standards and Appeals, except when tanks of unlimited capacities are supported on structures altogether independent of buildings.

The tank shall be filled through a fixed pipe, independent of the sprinkler piping, not less than two (2) inches in size, discharging into the top of the tank, or through a by-pass not less than two (2) inches in size around the check valve in the discharge pipe, provided the supply is of sufficient pressure to fill the tank. The water supply and connections shall be capable of supplying the tank at a rate of not less than sixty-five (65) gallons per minute.

The filling pipe shall be carried up inside a frost-proof casing and may extend through tank bottom to discharge at top of tank above full water level. The portion of pipe inside tank must be of brass or copper or other non-corrosive material.

Tanks shall not be fed through sprinkler lines.

The sprinkler and standpipe tanks may be fed from a common source of supply, either a pump or a direct service main connection, provided that there are separate feed mains from the basement or lowest story and a control valve in each feed line in a pump or engine room.

The overflow pipe shall be not less than two (2) inches in diameter for tanks up to 30,000 gallons capacity and not less than three (3) inches in diameter for larger tanks. The top of the overflow pipe shall be three (3) inches below the top of the staves in wooden tanks and one (1) inch from the top in steel tanks. The pipe may extend through the bottom of tank provided the portion inside tank is of brass or copper or other non-corrosive metal and without joints or it may extend through side of tank. For tanks over roofs overflow pipes shall terminate not more than twenty-four (24) inches above roof and shall be fitted with a 90 degree elbow.

The discharge, heating or filling pipes where exposed to the weather shall be protected from freezing by a frost-proof covering which may be of three layers of one-inch (1") hair felt interspersed with building paper well wrapped and secured and covered with canvas well painted or by frost-proof boxing as specified by the National Board of Fire Underwriters.

Easy access to top of each tank shall be provided by means of a steel gooseneck ladder substantially constructed and rigidly braced, the top of which shall not tip outward from the vertical at any point.

Tanks above roofs shall be constructed according to the requirements of the Building Code and supporting struc-

PUBLIC HEARING

tures shall be approved by the Superintendent of Buildings. Tanks not enclosed and exposed to the weather shall be covered with a double roof of acceptable construction consisting of a tight flat cover of matched boards and above this a conical roof which shall be covered with an approved roofing.

Where a gravity tank may supply both sprinklers and yard hydrants it shall not be of less than 30,000 gallons capacity and located on a structure altogether independent of buildings and the bottom shall not be less than 75 feet above the ground level, and not less than 20 feet above the highest line of sprinklers below the main roof of the highest building in a group of buildings.

Rule 6. Pressure Tank. Pressure tanks shall contain sufficient water to supply twelve and one-half per cent (12½%) of the number of sprinklers in the average protected fire area for twenty (20) minutes, but not less than [5,000] 3,000 gallons of water for a wet pipe system where supplemented by an auxiliary water supply, and not less than 5,000 gallons of water for a dry-pipe system. No single tank shall have a capacity greater than 9,000 gallons. The tank shall be kept two-thirds (2/3) full of water under a pressure of seventy-five (75) pounds per square inch, and shall be so proportioned and located that a pressure of not less than fifteen (15) pounds per square inch will be available on the highest line of sprinklers below the main roof when all the water has been discharged from the tank.

[The tank shall be placed either on the roof or in the highest sprinklered story.]

A pressure tank or tanks shall not be located below the highest line of sprinklers supplied by tank or tanks.

Where [a tank] the total capacity of the pressure tank supply is in excess of [25,000] 30,000 gallons as required by this rule, the amount of water to be provided in excess of [25,000] 30,000 gallons shall be specified by the Board of Standards and Appeals.

The water shall be supplied through a fixed pipe, independent of the sprinkler piping, not less than [two] one and one-half (1½) inches in size [with a one and one-quarter (1¼) inch connection to the tank], or through a by-pass not less than [two (2)] one and one-half (1½) inches in size around the check valve in the discharge pipe provided the supply is of sufficient pressure to fill the tank. The water supply and connections shall be capable of supplying the tank at a rate of not less than sixty-five (65) gallons per minute without reducing the pressure in the tank. The tank shall have a fixed metallic horizontal line on the end opposite the glass gauge, or other acceptable device, to indicate the level of the water when the tank is two-thirds full.

The air compressor shall be of sufficient capacity to increase the air pressure at the average rate of one (1) pound in two minutes in each pressure tank.

Rule 7. Public Water System. Direct connection to the city water supply shall be capable of furnishing water at not less than fifteen (15) pounds per square inch static pressure at the highest line of sprinklers under the main roof.

Subject to the requirements of the Department of Water Supply, Gas and Electricity, the size of each connection shall be as large as that of the main riser and not less than four (4) inches, and shall have a conveniently accessible control valve fixed to it at, or near, the curb, or, when possible, still further away from the building. The control valve shall be fitted with a frost and waterproof box, not less than four (4) feet nor more than six (6) feet below the curb, with a fixed stem extending to a compartment at the level of the sidewalk. The cover shall be bolted to the casing and shall be so marked as to be quickly located and to indicate the purpose of the valve. The valve shall be of indicating pattern, operated by a special socket wrench approved by the department of water supply, gas and electricity.

Where it is impractical to install a control valve box at the curb because of a vault under the sidewalk and within 18" thereof, the control valve may be located in the water supply connection at a point not more than two (2) feet from the point of entry into a vault.

Where a water meter is required in the water supply connection to an automatic sprinkler equipment, it shall be of a type which allows free flow of water and approved by the Department of Water Supply, Gas and Electricity, or a type of fire line meter which has been specifically approved by the Fire Commissioner for use in connection with fire extinguishing equipment.

Evidence establishing the fact that water supply conditions and pressures are as may be required shall be submitted to the Fire Department.

Rule 8. Fire Pump. An automatic electric fire pump as an automatic source of water supply is one approved for such use and controlled by an approved automatic controlling device, which shall be adjusted to maintain not less than 15 pounds water pressure at the highest sprinkler below main roof and in pent houses over 2,500 sq. ft., as provided in Rule 5. And shall receive water supply only from a direct connection to the city water main.

As auxiliary sources of water supply steam or electric standard fire pumps shall receive water supply from a suction tank, a direct connection to the city water main or other approved sources capable of supplying the pump at its rated capacity for sixty (60) minutes. The rated capacity of the pump shall be not less than five hundred (500) gallons per minute, and shall be sufficient to supply twenty-five per cent (25%) of the number of sprinklers in the average protected fire area.

The pump shall be located in a room of fireproof construction, properly ventilated, lighted and drained, enclosed in eight (8) inch brick or concrete walls with approved fire doors at openings and with fireproof floor and ceiling construction. If located in the lowest story of the building, the pump shall be placed on a foundation not less than one (1) foot in height. The pump room shall be readily accessible with safe egress for the attendant.

A reliable source of energy for driving the pump shall be provided. For steam pumps, provision shall be made for sufficient steam power to operate the pumps at full rated capacity, and a steam pressure of not less than fifty (50) pounds shall be maintained at the pump at all times. Where there is more than one boiler, the pipes and valves shall be so arranged to permit the cutting out of any one boiler without interrupting the steam supply to the pump from the other boilers. The boiler room shall be cut off from the remainder of the building by fireproof floor and wall construction with approved fire doors at all openings.

Electrical energy from a public service plant shall be acceptable as a source of energy for driving electric fire pumps. When local power plants supply the energy for operating electric pumps, two motor generator units shall be provided, or one generator unit supplemented by a public service break-down switch. Local electric power plants shall be located in rooms of fireproof construction with approved fire doors at openings.

Rule 9. Sprinkler Discharge. For the purpose of computing the capacity of water supplies, standard one-half (½) inch sprinkler heads shall be assumed to have an average discharge of twenty (20) gallons per minute, and the discharge of larger heads shall be computed proportionately in the ratio of the areas of their respective orifices.

Rule 10. Fire Area. A fire area is any floor space enclosed on all sides by exterior walls or fire walls or a combination of both. The number of sprinklers in the average protected fire area shall be determined by the number of sprinklered stories in such section. In

PUBLIC HEARING

determining the required capacity of water supplies, the number of sprinklers in the average protected fire area need not include those located in low positions, such as under benches, low shelves, closets and platforms and between cars in car barns.

Rule 11. Fire Department Connection. All automatic sprinkler systems shall be provided with at least one two-way Siamese connection on each street front of the building for connection to the fire department hose. Buildings fronting on only one street shall be provided with at least two Siamese connections when the street frontage of building exceeds [one hundred and fifty (150)] two hundred (200) feet [in width].

Where buildings have frontages on more than one street there shall be a fire department connection on each street front where frontage is not continuous but in all cases where more than one fire department connection is required they shall be located as the Fire Commissioner may direct and shall not be grouped.

All Siamese hose connections hereafter installed, except those on piers or warehouses intended for fire boat use, shall be three (3) inches in size. Fire boat connections shall be three and one-half (3½) inches in size. All hose connections shall be female, with standard fire department threads.

The inlets shall be placed at least eighteen (18) inches and not more than two (2) feet above the sidewalk, in a horizontal position accessible to the fire department, and shall be provided with a four (4) inch discharge connecting with a four (4) inch pipe to the sprinkler system for three (3) inch fire department connection and with a six (6) inch discharge outlet and six (6) inch pipe for three and one-half (3½) inch fire boat connection. Each inlet shall be provided with a clapper valve machined to a true face.

Each Siamese connection shall be designated by raised letters at least one (1) inch in size, cast in the fitting in a clear and prominent manner and reading for the service designated, viz.: "Base. Spkr.," etc., as the case may be. If the entire building is sprinklered, the fitting shall be marked "Auto. Spkr."

Siamese hose connections may project through a street wall not more than twelve (12) inches beyond the building line except that where there is an angle formed by the street wall and a check piece or the base of a column, pilaster or ornamental projection, they may be so located that no part extends more than fifteen (15) inches from either side of such angle in accordance with the provisions of the Building Code.

In each fire department connection there shall be an approved straightway check valve installed in a horizontal position, unless suitably designed for vertical position, and the piping shall be arranged to drain between the check valve and the outside siamese coupling by either a ball drip having a one-half (½) inch pipe connection and one-half (½) inch orifice and a bronze ball of proper size, or by a three-quarter (¾) inch drip connection, with plugged valve attached, and when necessary arranged to drain to a sewer. A drain connection may be tapped into the body of check valve only when located in a horizontal position.

Rule 12. Automatic Sprinkler Systems. Automatic sprinkler systems shall be classified as:

(a) One Source Systems, supplied with water from any one of the automatic sources; and

(b) Two Source Systems, supplied with water from a combination of any two of the automatic sources; two pressure tanks with a total water capacity twice that required for a one source supply; direct connection to the city water supply on two different streets, so located that the closing of the controlling valve on one main will not eliminate the main on the other street; or a direct connection to the city water supply and one of the auxiliary sources provided the water supply main is at least six (6) inches in size, the main is fed both

ways and a two (2) inch test pipe at the top of the sprinkler riser shows a flowing pressure of fifteen (15) pounds per square inch between the hours of six a. m. to six p. m.

A gravity tank and pressure tank, or a gravity tank or pressure tank and one of the automatic sources or two pressure tanks having a total water capacity for a one-source supply may be considered as a two-source supply where the occupancy of the building does not conflict with Rules 38, 39 and 40 hereinafter provided for.

Rule 13. Sprinkler Spacing. Sprinkler heads and lines shall be spaced as herein provided:

Mill Construction. Under mill ceiling (smooth solid plank and timber construction, 5 to 12 foot bays) one line of sprinklers shall be placed in the center of each bay and the distance between the heads on each line shall not exceed the following:

(a) For Standard one-half (½) inch heads—

8 feet in 12 foot bays;

9 feet in 11 foot bays;

10 feet in 10 foot bays;

11 feet in 9 foot bays;

12 feet in 5 to 8 foot bays;

(b) For Conran* one (1) inch heads—

20 feet in 5 to 12 foot bays.

(c) For Conran* one and one-quarter (1¼) inch heads—

25 feet in 5 to 12 foot bays.

(d) Vaults used for the storage of nitro-cellulose products and vaults used for the storage of inflammable motion picture films shall have one standard one-half (½) inch head for each 62½ cubic feet of available storage space, or one (1) inch Conran* head for each 250 cubic feet of available storage space.

Measurements shall be taken from center to center of timbers.

Ceilings of modified mill construction having bays less than three (3) feet wide shall be treated as open joist construction and sprinkler heads and lines spaced accordingly.

Bay timbers spaced three (3) feet or more on centers, but less than five (5) feet on centers, will require special ruling by the administrative official having jurisdiction.

Joisted Construction. Under open finish joisted construction ceilings, floor, decks and roofs, the sprinkler lines shall be run at right angles to the joists and the heads "Staggered spaced" so that heads on one line will be opposite a point half way between heads on adjacent lines.

(a) For Standard one-half (½) inch heads the distance between lines of sprinklers shall not exceed ten (10) feet, and the distance between heads on each line shall not exceed eight (8) feet, the end heads on alternate lines being spaced not more than two (2) feet from wall or partition. Permission may be given by the administrative official having jurisdiction to install but one line of sprinklers, in each bay where girders project below the under side of joists and divide the ceiling into bays ten (10) to eleven and one-half (11½) feet wide from center to center of girders, and the heads shall then be spaced on each line so that the area covered by a single head does not exceed eighty (80) square feet. In all cases where such bays are over eleven and one-half (11½) feet wide, two or more lines of sprinklers shall be installed in each bay as required by the rules for spacing.

*Wherever the term "Conran head" is used in these Rules, it is to be taken as meaning either a Conran head of the type tested and approved by the Fire Department, or one that has passed similar tests by the Fire Department.

PUBLIC HEARING

Where girders and joists are flush at the bottom, heads shall be spaced according to the general rule.

(b) For Conran* one (1) inch heads the distance between adjacent lines shall not exceed twenty (20) feet and the distance between the heads on each line shall not exceed sixteen (16) feet, the end heads on alternate lines being spaced not more than four (4) feet from wall or partition. Where girders project below the under side of joists and divide the ceiling into bays not exceeding twenty (20) feet in width, measured from center to center of girders, one line shall be placed in the center of each bay. In bays exceeding twenty (20) feet in width at least two (2) lines shall be installed in each bay and in no case shall the distance between adjacent lines exceed twenty (20) feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads the distance between adjacent lines shall not exceed twenty-five (25) feet and the distance between the head on each line shall not exceed twenty (20) feet, the end head on alternate lines being spaced not more than five (5) feet from wall or partition. Where girders project below the under side of joists and divide the ceiling into bays not exceeding twenty-five (25) feet in width, measured from center to center of girders, one line shall be placed in the center of each bay. In bays exceeding twenty-five (25) feet in width at least two (2) lines shall be installed in each bay, and in no case shall the distance between adjacent lines exceed twenty-five (25) feet.

Smooth Finish, Sheathed or Plastered Ceilings. Under smooth finish, sheathed or plastered ceilings, in bays six (6) feet wide and over (measurements to be taken from center to center of timber, girder or other projection or support forming the bay), sprinkler heads and lines shall be spaced as follows:

(a) For standard one-half ($\frac{1}{2}$) inch heads—

One line of sprinklers shall be placed in the center of each bay for bays not exceeding twelve (12) feet in width, and the distance between the heads on each line shall not exceed the following:

- 8 feet in 12 foot bays;
- 9 feet in 11 foot bays;
- 10 feet in 6 to 10 foot bays.

Bays in excess of twelve (12) feet in width and less than twenty-three (23) feet in width, shall contain at least two (2) lines of sprinklers; bays twenty-three (23) feet in width or over shall have the lines therein not over ten (10) feet apart. In bays in excess of twelve (12) feet in width, not more than one hundred (100) square feet of ceiling area shall be allotted to any single head.

(b) For Conran* one (1) inch heads—

One line of sprinklers shall be placed in the center of each bay for bays not exceeding twenty (20) feet in width, and the distance between the heads on each line shall not exceed twenty (20) feet. Bays in excess of twenty (20) feet in width shall contain at least two (2) lines and in no case shall the distance between adjacent lines exceed twenty (20) feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads—

One line of sprinklers shall be placed in the center of each bay for bays not exceeding twenty-five (25) feet in width and the distance between the heads on each line shall not exceed twenty-five (25) feet. Bays in excess of twenty-five (25) feet in width shall contain at least two (2) lines and in no case shall the distance between adjacent lines exceed twenty-five (25) feet.

Fireproof Construction. The rules of slow-burning mill construction shall apply as far as practicable. The rule may be modified, however, the intent being to arrange the spacing of heads to protect the contents rather than the ceilings; but in no case shall the distance between a head on one line and a head on an adjacent line exceed the following:

(a) For standard one-half ($\frac{1}{2}$) inch heads, 12 feet.

(b) For Conran one (1) inch heads, 20 feet.

(c) For Conran one and one-quarter ($1\frac{1}{4}$) inch heads, 25 feet.

Distance From Walls. The distance from wall or partition to the first head on a sprinkler line shall not exceed one-half the allowable distance between the heads on such line. Additional heads may be required in the narrow pockets formed by bay timbers or beams and wall. Where beams, girders, columns, walls, partitions or other obstructions prevent the effective discharge of water, additional heads shall be installed to effectively sprinkle the area.

Vertical Shafts. In vertical shafts having inflammable sides, heads shall be provided within the shaft in addition to the head or heads at the tops of shafts, as follows:

(a) One standard one-half ($\frac{1}{2}$) inch head for each 200 square feet of inflammable surface.

(b) One Conran* one (1) inch head for each 100 square feet of inflammable surface.

(c) One Conran* one and one-quarter ($1\frac{1}{4}$) inch head for each 500 square feet of inflammable surface.

Such head or heads shall be installed at each floor when practicable, and always when shaft is trapped. Where practicable, heads shall be "staggered" at the alternate floor levels, particularly when only one head is installed at each floor level.

Pitched Roofs. Under a pitched roof sloping more steeply than one (1) foot in three (3) feet, heads shall be located in peak of roof, and those on either side of the peak shall be spaced according to the foregoing requirements. The distance between heads shall be measured on a line parallel with the roof. Where the roof meets the side wall or the floor line, the heads shall be placed not more than the following distance from such intersection:

(a) For standard one-half ($\frac{1}{2}$) inch heads, $3\frac{1}{2}$ feet.

(b) For Conran* one (1) inch heads, 7 feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, $8\frac{1}{2}$ feet.

Heads spaced not to exceed the following distance each way from the peak of roof, measured on a line parallel with the roof, may be used in lieu of heads located in peak of roof:

(a) For standard one-half ($\frac{1}{2}$) inch heads, $2\frac{1}{2}$ feet.

(b) For Conran* one (1) inch heads, 5 feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, $6\frac{1}{4}$ feet.

In sawtooth roof construction, the end heads on the branch line shall be spaced not to exceed the following distance from the peak of the sawtooth:

(a) For standard one-half ($\frac{1}{2}$) inch heads, $2\frac{1}{2}$ feet.

(b) For Conran* one (1) inch heads, 5 feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, $6\frac{1}{4}$ feet.

Special Locations and Variations. In special locations, such as over electric generating, power and transforming apparatus, over their controlling devices and switchboards, where water from the fire extinguishing equipment would be detrimental, the sprinkler lines and heads may be omitted at the discretion of the administrative official having jurisdiction, and when in his judgment a slight variation of this rule of spacing is desirable to effect a more efficient distribution of water for fire extinguishing purposes, the sprinkler lines and heads shall be spaced as he may direct.

Rule 14. Sprinkler Position. All sprinkler heads shall be located, wherever possible, in an upright position on top of the pipes, except that sprinkler heads on automatic wet pipe systems may be pendant on concealed piping and when construction or occupancy of a room or enclosure makes it preferable.

(a) Where standard one-half ($\frac{1}{2}$) inch heads are installed sprinkler deflectors shall be parallel to ceilings, roofs or the

PUBLIC HEARING

incline of stairs, but when installed in the peak of a pitched roof they shall be horizontal. Distance of deflectors from ceilings of mill or other smooth construction, or bottom of joists of open joist construction, shall be not less than three (3) inches nor more than ten (10) inches.

In fireproof buildings, the distance between deflectors and panel ceilings shall not exceed fifteen (15) inches.

Not less than eighteen (18) inches effective clear space shall be left below the sprinkler heads, so that they may discharge an unbroken spray blanket from sprinkler to sprinkler and sides of room when in operation. Any stock piles, racks or other obstructions interfering with such action shall not be permitted. *Sprinkler system piping shall not be used for the support of stock, clothing, etc.*

(b) Where Conran* heads are installed, the top of head shall be located the same distance below joists or ceiling as specified for deflectors in paragraph (a) of this rule; except that when heads are located under pitched roofs of piers or similar structures, they shall in general be installed in the upright position (not normal to slope of roof) and three (3) feet vertically below the underside of roof. When the administrative official having jurisdiction deems a variation of this rule advisable to obtain a more efficient distribution of water, the heads shall be located with respect to joists or ceiling, as he may direct.

Rule 15. Pipe Sizes. The number of heads on a given size pipe in one fire area in any story shall not exceed the following:

(a) For standard one-half ($\frac{1}{2}$) inch heads—

Size of Pipe	Maximum No. of Heads Allowed
$\frac{3}{4}$ inch	1 head
1 "	2 heads
$1\frac{1}{4}$ "	3 "
$1\frac{1}{2}$ "	5 "
2 "	10 "
$2\frac{1}{2}$ "	20 "
3 "	36 "
$3\frac{1}{2}$ "	55 "
4 "	80 "
5 "	140 "
6 "	200 "
7 "	300 "
8 "	420 "

(b) For Conran* one (1) inch heads—

Size of Pipe	Maximum No. of Heads Allowed
1 inch	1 head
$1\frac{1}{4}$ "	2 heads
$1\frac{1}{2}$ "	3 "
2 "	4 "
$2\frac{1}{2}$ "	6 "
3 "	9 "
4 "	18 "
5 "	34 "
6 "	51 "
7 "	75 "
8 "	105 "

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads—

Size of Pipe	Maximum No. of Heads Allowed
$1\frac{1}{4}$ inch	1 head
$1\frac{1}{2}$ "	2 heads
2 "	3 "
$2\frac{1}{2}$ "	4 "
3 "	6 "
4 "	12 "
5 "	21 "
6 "	40 "
7 "	60 "
8 "	84 "

When it is desired to use pipe of larger size than eight (8) inches in diameter, special ruling will be required by the administrative official having jurisdiction as to the permissibility of its use and the number of heads that may be fed thereby.

Where practicable, it is desirable to arrange the piping so that the number of heads on a branch line will not exceed eight.

When the piping is arranged on the "gridiron" plan, the permissible number of heads may be doubled, provided the feed main is of the size indicated in the schedule for the total number of heads.

Where feed mains supply branch lines of only two heads each, the conditions approach those of long single lines. Such feed mains shall usually be centrally supplied where there are over eight (8) or ten (10) branch lines. Branch lines up to fourteen (14) in number may be fed from end, provided a two and one-half ($2\frac{1}{2}$) inch pipe does not supply more than sixteen (16) standard one-half ($\frac{1}{2}$) inch heads, in lieu of twenty (20).

Buildings having slatted floors, or large unprotected floor openings without approved stops, shall be treated as one room with reference to the pipe sizes, and the feed main shall be of sufficient size to accommodate the number of heads called for. Larger pipe sizes than are allowed in the schedule for a given number of heads may be required wherever the construction or conditions introduce unusually long runs of feed mains or many angles. Buildings with blind attics with small unprotected openings to floor below, may be piped from the system on the ceiling of floor below, provided pipe size schedule is not overloaded on sizes three (3) inches or under.

Rule 16. Feed Mains. The size of feed mains shall not be less than the size of riser and shall be arranged to run as direct as possible from source of water supply to riser.

Feed mains for stair or other towers without approved stops between floors, when piped on independent riser, shall be of sufficient size to accommodate the total number of sprinklers in such tower.

Rule 17. Risers. There shall be one or more separate risers in each building and in each section of the building divided by fire walls. Risers shall be arranged to provide "Center Central" or "Side Central" supply to feed main. Each riser shall be of sufficient size to supply all the heads on said riser in one story, according to the schedule of pipe sizes in Rule 15.

In buildings of fireproof construction, and for the purposes of this rule, a blank wall, or one in which the openings are protected by standard fire doors, may be considered as a fire wall, if of equivalent construction.

If the conditions warrant, special permission will be granted allowing the heads in a fire section of small area to be fed from the risers in another section, provided the total number of heads in such area does not exceed the following number per floor:

(a) For standard one-half ($\frac{1}{2}$) inch heads, 48.

(b) For Conran* one (1) inch heads, 12.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, 8.

Risers shall not be located close to windows, properly protected from mechanical injury and freezing and shall be properly supported on foundations and by floor plates, clamps, couplings or hangers.

No connections, such as for sill cocks, house service or hose outlets, shall be made with a sprinkler system riser or any part thereof.

Where gravity and pressure tanks feed through a common discharge pipe or "dead riser" to the foot of a riser and an air lock is likely to develop the discharge pipe of the gravity tank shall connect with the discharge pipe, or "dead riser", forty (40) feet below the bottom of the pressure tank.

PUBLIC HEARING

Rule 18. Pipes and Fittings. All pipe shall be full-weight standard wrought iron or steel threaded pipe, well reamed and screwed up tight into fittings without reducing the passageway. Fittings shall be standard cast iron fittings, and shall be long turn pattern on feed mains and risers.

Such fittings shall be designed and guaranteed for a working pressure of 150 pounds per square inch and must be capable of withstanding a hydrostatic test pressure of 750 pounds per square inch without failure.

All pipe shall be secured to the ceiling, walls and other parts of the building with standard steel, wrought or malleable iron hangers.

Extra heavy fittings shall be employed where the normal pressure in the pipe system exceeds one hundred and fifty (50) pounds per square inch, and shall be designed for a working pressure of 250 pounds per square inch and be capable of withstanding a hydrostatic test pressure of 1,250 pounds per square inch without failure.

All underground pipe shall comply with the specifications for cast iron pipe of the American Water Works Association.

Rule 19. Protection of Pipes and Sprinklers. When exposed to moisture, sprinkler pipes and hangers shall be protected against corrosion whenever found necessary by thoroughly cleaning the pipe of all scale and grease and painting with a coat of red lead and linseed oil paint or other acceptable moisture resistive paint. When exposed to chemical fumes, the pipe and fittings shall be coated with graphite or other approved chemical resistive paint. Care shall be taken not to paint the sprinkler heads.

Supply pipes of risers in low basements or low spaces under ground floors exposed to frost, shall be properly protected by a masonry or wood enclosure, properly heated, or lined with mineral wool, sawdust or tar mixed with granulated cork, extending below bottom of pipe and through the flooring of ground floor, or the pipe shall be protected with three alternate layers of one-inch hair felt and building paper or by other approved method. When of wood, such enclosure shall be constructed double with a layer of building paper between the two thicknesses of wood.

Where risers, drains, heating pipes, etc., pass through concrete floors or partitions, they shall be protected with a metal sleeve or be grouted with cement mortar.

Wherever sprinklers are exposed to corrosion, the heads shall be protected with an approved hermetically sealed cover, with an approved wax coating.

Rule 20. Drainage. All sprinkler pipe and fittings shall be so installed that they can be thoroughly drained, and where practicable, all piping shall be arranged to drain at the main drips.

Drains or drip pipes shall be so arranged as not to expose any part of the sprinkler system to frost, and shall be so connected, either by check valves or other means, that they will not [overthrow] overflow domestic service or other connections to the same sewer or house drain, or if carried through the wall and exposed to the weather, they shall be fitted with hoods or down-turned elbows.

Drains, pitched not less than one-quarter ($\frac{1}{4}$) inch in ten (10) feet, shall be installed:

- At the base of the main riser;
- At each alarm valve;
- At each dry-pipe valve;
- At each gravity tank;
- At each pressure tank.

At each fire department connection;

On each floor, if independent floor control valves are used; and

At each supply main, when the water in the same cannot be removed through any of the above drains. Such drains shall be installed with controlling valves so that flow tests may be made to determine if the water supplies or connections from yard mains to the inside of the build-

ing are in order without causing water damage or overflowing service connections to the same house drain. Any such drain shall be not less than two (2) inches in size except that drains at independent floor valves [may be one and one-quarter ($1\frac{1}{4}$) inches in size] shall be not less than 1 inch in size where floor valves are not over $2\frac{1}{2}$ inches in size and $1\frac{1}{4}$ inches where floor valves are larger, and connected to a main drain riser of not less than $1\frac{1}{2}$ inches in size. The drain at the main riser shall discharge into a cone or sight drain, or if carried through the wall and exposed to the weather, it shall be fitted with a hood or down-turned elbow.

At an alarm valve at the top of a riser in a down-fed system a drain shall not be required.

At each gravity or pressure tank erected above roof of a building there shall be a 4-inch valved drain connection so arranged as to discharge on roof of building. And where a tank is on a separate structure altogether independent of buildings drain connection to be arranged to discharge at ground level.

On automatic wet pipe systems, the horizontal branch pipes shall be pitched not less than one-quarter ($\frac{1}{4}$) inch in ten (10) feet to drain towards the sources of supply with drip valves at the low points.

On automatic dry-pipe systems, branch pipes shall be pitched at least one-half ($\frac{1}{2}$) inch in ten (10) feet.

Rule 21. Test Pipe. [On] In all wet-pipe automatic sprinkler systems a test pipe of not less than $\frac{3}{4}$ inch in diameter shall be connected directly with each [riser] system but shall be connected to a pipe of not less than $1\frac{3}{4}$ inches in diameter in upper story and arranged to discharge, through a $\frac{1}{2}$ -inch brass outlet, preferably to a point where it can readily be seen. With long runs or many angles, size of test pipe [shall] should be increased to one (1) inch or larger. Controlling valve should be located at a sufficient distance from where the test pipe passes through the wall of the building so as to reduce to a minimum the chance of freezing of water in test pipe.

In all dry-pipe automatic sprinkler systems a $\frac{3}{4}$ -inch inspector's test pipe shall be installed at the end of the most distant branch line and fitted with a $\frac{3}{4}$ -inch shut-off valve stopped with a brass plug.

Rule 22. Pressure Gauges. A four and one-half ($4\frac{1}{2}$) inch double-spring Bourdon pressure gauge shall be provided in all automatic sprinkler systems as follows:

- Above dry-pipe valves;
- Below dry-pipe valves;
- At the pressure tank;
- At the air compressor;
- Above the alarm valve;
- Below the alarm valve; and

In the connections from city water supply.

Provision may be made for taking the pressure both above and below the alarm valve and the dry-pipe valve with only one gauge at each valve.

A gauge shall not be required at an alarm valve located at the top of a riser in a down-fed system.

Gauge connections shall be taken from the supply main or riser and not from the two-inch drain or test pipe.

Gauges shall be installed in a suitable place protected from freezing and be controlled by a valve with arrangements for draining. A plugged outlet, not less than one-quarter ($\frac{1}{4}$) inch in size, shall be located between each valve and gauge for purpose of installing the inspector's gauge.

Rule 23. Valves. All valves two (2) inches in diameter and under shall be of brass or bronze, or other approved [non-corrodible] non-corrosive material. Valves over two (2) inches in diameter shall be of brass, or bronze or iron body, brass mounted, or of other approved [non-corrodible] non-corrosive material.

All sidewalk Siamese inlet valves, caps and chains shall be of galvanized cast iron or other approved [non-corrodible] non-corrosive material.

PUBLIC HEARING

All gate valves shall be solid or double wedge disc, sufficing box pattern with hand wheel, outside screw and yoke, or other approved indicator pattern.

All check valves shall be approved straight way regrinding pattern, so built that the clappers may be readily removed for repairs.

Rule 24. Water Supply Gate Valves. The piping connecting each source of water supply with the sprinkler system shall be provided with a gate valve of the outside screw and yoke type, sealed open and tagged to designate its purpose, so located as to control each source of water supply except that from fire department hose connections. All such gate valves shall be located within the building where easily visible and readily accessible and as close as possible to the supply inlet.

Rule 25. Water Supply Check Valves. The piping connecting each source of water supply with the sprinkler system, including fire department connections, shall be provided with a check valve.

On two-source systems, check valves shall have a gate valve on each side to permit repair of check without shutting off both supplies, except that where the two sources of supply consist of tanks located above the highest line of sprinklers, a gate valve need only be provided on the downstream side of each check valve.

Rule 26. Control Valves. All automatic sprinkler systems shall be provided with a main control or shutoff valve arranged to be readily accessible and sealed in the open position; except that when the sprinkler system is fed from water supplies on the roof of the building, independent and readily accessible floor control valves, sealed in the open position, may be installed.

When not more than ten (10) standard one-half ($\frac{1}{2}$) inch sprinkler heads or three (3) Conran* heads in any automatic wet pipe system are exposed to cold and subject to freezing, shutoff valves may be provided to discontinue the water supply to such heads between November 1 and April 1. A greater number of heads than specified above, located in places which cannot be properly heated, shall be controlled by an automatic dry-pipe valve.

Rule 27. Dry-Pipe Valves. A dry-pipe valve shall be taken to mean a valve automatically controlling the water supply of the sprinkler system in such a manner that under normal conditions its piping system beyond the valve is maintained dry, but in the event of fire, the valve automatically releases the water into the sprinkler system, for fire extinguishing purposes.

Dry-pipe valves shall, for the purpose of these rules, be classified as follows:

Type A, in which the valve is actuated by the release of compressed air in the sprinkler piping system, due to the opening of a sprinkler head; and

Type B, in which the valve is actuated by an approved trip under electric control of an approved automatic thermostatic fire alarm system.

Dry-pipe valves shall be located as near as practicable to the sprinkler system in an enclosed and accessible place protected from mechanical injury and freezing.

When anti-columning pipes are used, they shall be either lead lined or of brass.

Automatic wet-pipe sprinkler systems in which only twenty-five (25) per cent of the heads are required to be maintained dry for protection from freezing, shall have only such heads under dry-pipe valve control.

(a) When "Type A" valve is installed, the air pressure in sprinkler systems under such dry-pipe valve control shall not exceed forty (40) pounds per square inch, nor be permitted to fall below twenty-five (25) pounds per square inch, nor shall it be less than one-sixth ($\frac{1}{6}$) of the water pressure in any case.

The air compressor shall have a capacity of not less than eleven (11) cubic feet per minute and the air supply to the pump shall be taken, if possible, from a room containing dry air, or it shall be passed through a drying chamber containing calcium chloride, in order to avoid the introduction of moisture into the system.

The air pressure on such dry-pipe systems shall be maintained throughout the year.

Not more than the following number of heads shall be controlled by one "Type A" dry-pipe valve:

(a) For standard one-half ($\frac{1}{2}$) inch heads

(b) For Conran* one (1) inch heads

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads

Where equipped with an approved quick-opening device, the following number of heads may be controlled by one "Type A" dry-pipe valve:

(a) For Standard one-half ($\frac{1}{2}$) inch heads

(b) For Conran* one (1) inch heads

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads

(b) When "Type B" valve is installed the actuating alarm system shall be designed to operate at a temperature lower than that required to open the sprinkler heads, and all connections between the alarm system and the dry-pipe valve shall be adequately protected against injury of any kind.

When required by the administrative official having jurisdiction, the dead end of every feed main in such dry-pipe system shall be provided with an air relief valve or valve so constructed as to be normally open in order to permit the free escape of air from the system, but to close automatically against the escape of water.

Not more than the following number of heads shall be controlled by one "Type B" dry-pipe valve:

(a) For Standard one-half ($\frac{1}{2}$) inch heads

(b) For Conran* one (1) inch heads

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads

Rule 28. Alarm Valve. All automatic wet pipe sprinkler systems shall be equipped with an alarm valve so constructed that a flow of water through a one-half ($\frac{1}{2}$) inch orifice will operate an electric or mechanical gong.

Dry pipe valves shall be equipped with a reliable device to give either an electrical or mechanical alarm.

Rule 29. High and Low Water and Pressure Alarm. Gravity tanks shall be equipped with a device to indicate when the water falls below or rises above the normal level of the tank, with an indicator or alarm located in the engineer's room near the pump.

All pressure tanks shall be equipped with a device to indicate when the pressure in the tank falls below seven (70) or rises above eighty (80) pounds per square inch with an indicator or alarm located in the engineer's room [near the compressor].

Rule 30. Heating of Tanks. The water in all sprinkler tanks subject to freezing shall be protected by internal heating the water or enclosing the tank in a frost-proof house properly heated and lighted.

Rule 31. Concealed Pipe Systems. All pipe in concealed pipe systems shall be of standard full-weight wrought iron or steel, painted with two coats of protective paint, or before and one after installation. Such pipe shall be installed in ducts or be encased in cement mortar and shall be inspected prior to concealment. When installed in the concealed space between floor arches and ceiling, such pipe shall be supported by hangers and all pipe, fittings and hangers be protected with two coats of paint.

Rule 32. Preparation of Building. Floor or wall openings and other structural defects which prevent the banking up of heated air and retard the automatic action of sprinkler heads shall be provided with the necessary curtain boards and draft stops to permit specific control of the fire by the local sprinklers.

Curtain boards shall project at least three (3) inches below the lowest sprinkler.

PUBLIC HEARING

le 33. *Approval of Sprinkler System [Tests]. Before* tance all automatic sprinkler systems, excluding the wa-
supply tanks, shall be subjected after installation to a
static pressure of a test of at least fifty (50) pounds
square inch in excess of that which will be normally
ed and observed in the sprinkler system, such test
ure, however, never to be less than one hundred and
(150) pounds per square inch in any part of the sys-

l pressure tanks shall be tested after erection to a test
ure of one and one-half (1½) times the working pres-

To prevent the possibility of serious water damage
se of a break, the pressure shall be maintained by a
l pump, the main controlling gate being meanwhile
shut. Brine or other corrosive chemicals shall not be
for testing systems.

automatic dry-pipe systems with "Type A" valve con-
an air pressure of forty (40) pounds per square inch
l be pumped up, be held for twenty-four (24) hours,
all leaks stopped which allow a loss of pressure of over
(2) pounds per square inch for the twenty-four (24)
s.

the case of automatic dry-pipe systems with differen-
"Type A" valve, the valve shall be held off its seat
ng the test to prevent injuring the valve.

on-automatic systems shall be tested after installation
ot less than fifty (50) pounds per square inch in excess
he pressure necessary to reach the highest line of sprin-
s.

ll tests of installed systems shall be made by the con-
tor in the presence of the Fire Commissioner, or his
torized representative.

o piping, devices nor any portion of a newly constructed
nkler system shall be covered up or permanently con-
ed until tested by the Bureau of Fire Prevention and
ored of in writing, except piping passing through floors,
s, partitions or beams for distances equal to the thick-
of such floors, walls, partitions or beams.

ule 34. *Non-fireproof Business Buildings.* Automatic
nklers required in non-fireproof business buildings under
provisions of Chapter 5, Article 4, Section 72, Code of
inances, unless otherwise specifically provided in these
s, shall consist of at least a One Source System.

ule 35. *Dangerous or Hazardous Buildings.* Automatic
nklers required in buildings having occupancies consid-
to be dangerous or hazardous by the Fire Commis-
er shall consist of at least a one-source system unless
wise specifically provided for in these rules.

ule 36. *Factories and other Buildings.* Automatic sprin-
s required in buildings under the provisions of the Code
Ordinances and the Labor Law shall consist of at least
ne-source system.

ule [35] 37. *Theatre Buildings.* Automatic sprinklers
ired in theatre buildings under the provisions of Chap-
5, Article 25, Section 524, Code of Ordinances, shall con-
of at least a One Source System.

ule [36] 38. *Firework Storage.* Automatic sprinklers
ired in buildings in which fireworks are stored or sold
er the provisions of Chapter 10, Article 6, Section 92,
le of Ordinances, shall consist of a Two Source System.

Rule [37] 39. *Nitro-Cellulose Products.* Automatic sprin-
klers as required in buildings in which nitro-cellulose prod-
ucts are stored under the provisions of Chapter 10, Article
19, Section 232, Code of Ordinances, shall consist of a sys-
tem supplied from both approved gravity tank supply and
an approved pressure tank supply, except that no change
shall be required in supplies to automatic sprinkler equip-
ments previously approved by the Fire Commissioner as
two source systems, in conformity with the provisions of this
rule as in force up to December 1, 1921.

*In buildings wherein are stored or handled only limited
quantities of nitro-cellulose products, not exceeding 500
pounds, the automatic sprinklers may consist of a two source
system as provided for in Rule 12.*

Rule [38] 40. *Inflammable Motion-Picture Films.* Auto-
matic sprinklers, required in buildings in which inflammable
motion-picture films are stored under the provisions of Chap-
ter 10, Article 20, Section 241, Code of Ordinances, shall
consist of a system supplied from both an approved gravity
tank supply and an approved pressure tank supply except
that no change shall be required in supplies to automatic
sprinkler equipments previously approved by the Fire Com-
missioner as two source systems in conformity with the pro-
visions of this rule as in force up to December 1st, 1921.

Rule [39] 41. *Existing Installations and Approvals.* Au-
tomatic extinguisher systems and devices heretofore ap-
proved and accepted by the authorities having jurisdiction
shall not be required to conform to the provisions of these
rules; and all such systems heretofore installed shall not
be required to be altered to conform to these rules so long
as the fire hazard due to construction and occupancy of the
building is not increased or where substantial additions or
extensions in height or area is made to the building when
these rules shall apply if deemed advisable or necessary by
the Fire Commissioner and the system after inspection is
found to be in good working order.

Rule 42. *Communicating Openings.* When a building
fully equipped with sprinklers communicates with another
not so equipped the openings must be protected by approved
fire doors on both sides of the wall, one of which must be
automatic.

Rule 43. *Maintenance Inspections.* Automatic sprinkler
systems shall be inspected at least once a month by the per-
son in charge of the building, or by other competent per-
son employed by the owner, to see that all parts of the sys-
tem are in perfect working order, and the fire department
connection or connections, if any, ready for immediate use
by the Fire Department. A detailed record of each inspec-
tion shall be kept for examination by a representative of the
Fire Department.

There shall be kept available at all times in the premises
a supply of extra sprinklers, never less than six (6), to re-
place promptly any fused or damaged sprinklers. And there
shall be one or more employes instructed in the maintenance
of sprinkler system.

Rule 44. *Open Sprinklers.* When open sprinklers are re-
quired for exposure protection by the Fire Department as
specified in the Building Code they shall be installed in ac-
cordance with the rules of the National Board of Fire
Underwriters. Plans for such installation to be filed with
the Fire Department for approval.

NOTICE

CITY OF NEW YORK

BOARD OF ESTIMATE AND APPORTIONMENT

AMENDED BUILDING ZONE RESOLUTION.

(Adopted October 3, 1924)

With Amendments to June 12, 1925.

A Resolution Regulating and Limiting the Height and Bulk of Buildings Hereafter Erected and Regulating and Determining the Area of Yards, Courts and Other Open Spaces, and Regulating and Restricting the Location of Trades and Industries and the Location of Buildings Designed for Specified Uses and Establishing the Boundaries of Districts for the Said Purposes.

Be it Resolved by the Board of Estimate and Apportionment of The City of New York:

Article I—Definitions.

§ 1. *Definitions.* Certain words in this resolution are defined for the purposes thereof as follows:

(a) Words used in the present tense include the future; the singular number includes the plural and the plural the singular; the word "lot" includes the word "plot"; the word "building" includes the word "structure."

(b) The "street line" is the dividing line between the street and the lot.

(c) The "width of the street" is the mean of the distances between the sides thereof within a block. Where a street borders a public place, public park or navigable body of water the width of the street is the mean width of such street plus the width, measured at right angles to the street line, of such public place, public park or body of water.

(d) The "curb level," for the purpose of measuring the height of any portion of a building, is the mean level of the curb in front of such portion of the building. But where a building is on a corner lot the curb level is the mean level of the curb on the street of greatest width. If such greatest width occurs on more than one street the curb level is the mean level of the curb on that street of greatest width which has the highest curb elevation. The "curb level" for the purpose of regulating and determining the area of yards, courts and open spaces is the mean level of the curb at that front of the building where there is the highest curb elevation. Where no curb elevation has been established or the building does not adjoin the street the average ground level of the lot shall be considered the curb level.

(e) A "street wall" of a building, at any level, is the wall or part of the building nearest to the street line.

(f) The "height of a building" is the vertical distance measured in the case of flat roofs from the curb level to the highest point of the roof beams adjacent to the street wall, and in the case of pitched roofs from the curb level to the mean height level of the gable. Where no roof beams exist or there are structures wholly or partly above the roof the height shall be measured from the curb level to the level of the highest point of the building. Where a building is a tenement house as defined in the Tenement House Law the height of the building on the street line shall be measured as prescribed in said law for the measurement of the height of a tenement house and such measurement shall be from the curb level as that term is used in said law.

(g) The "depth of a lot" is the mean distance from the street line of the lot to its rear line measured in the general direction of the side lines of the lot.

(h) A "rear yard" is an open unoccupied space on the same lot with a building between the rear line of the building and the rear line of the lot.

(i) The "depth of a rear yard" is the mean distance between the rear line of the building and the rear line of the lot.

(j) Lots or portions of lots shall be deemed "back to back" when they are on opposite sides of the same part of

a rear line common to both and the opposite street line on which the lots front are parallel with each other or meet at an angle with each other of not over 45 degrees.

(k) A "court" is an open unoccupied space, other than a rear yard, on the same lot with a building. A court extending to the street or to a rear yard is an "inner court." A court extending to the street or a rear yard is an "outer court." A court on the lot line extending through from the street to a rear yard or another street is a "side yard."

(l) The "height of a yard or a court" at any given level shall be measured from the lowest level of such yard or court as actually constructed or from the curb level, higher, to such level. The highest level of any given wall bounding a court or yard shall be deemed to be the mean height of such wall. Where a building is a tenement house as defined in the Tenement House Law, the height of a yard or a court shall be measured as prescribed in said law.

(m) The "least dimension" of a yard or court at any level is the least of the horizontal dimensions of such yard or court at such level. If two opposite sides of a yard or court are not parallel the horizontal dimension between them shall be deemed to be the mean distance between them.

(n) The "length of an outer court" at any given point shall be measured in the general direction of the side line of such court from the end opposite the end opening onto a street, or a rear yard, to such point.

Article II—Use Districts.

§ 2. *Use Districts.* For the purpose of regulating and restricting the location of trades and industries and the location of buildings designed for specified uses, the City of New York is hereby divided into three classes of districts: (1) residence districts, (2) business districts and (3) restricted districts; as shown on the amended use district map which accompanies this resolution and is hereby declared to be part hereof. The use districts designated on said amended map, consisting of thirty-five sheets and an index sheet, each dated July 1, 1924, and signed by the Chief Engineer of the Board of Estimate and Apportionment, are hereby established. The amended use district map designations and amended map designation rules which accompany said amended use district map are hereby declared to be part thereof. No building or premises shall be erected or used for any purpose other than a purpose permitted in the use district in which such building or premises is located.

§ 3. *Residence Districts.* In a residence district no building shall be erected other than a building, with its usual accessories, arranged, intended or designed exclusively for one or more of the following specified uses:

(1) Dwellings, which shall include dwellings for one or more families and boarding houses and also hotels which have thirty or more sleeping rooms.

(2) Clubs, excepting clubs the chief activity of which is a service customarily carried on as a business.

(3) Churches.

(4) Schools, libraries or public museums.

(5) Philanthropic or eleemosynary uses or institutions other than correctional institutions.

(6) Hospitals and sanitariums.

(7) Railroad passenger stations.

(8) Farming, truck gardening, nurseries or green houses.

In a residence district no building or premises shall be used for any use other than a use above specified for which buildings may be erected and for the accessory uses customarily incident thereto. The term accessory use shall not include a business nor shall it include any building or use not located on the same lot with the building or use to which it is accessory. A private garage for more than five motor vehicles shall not be deemed an accessory use.

NOTICE

§ 4. *Business Districts.* (a) In a business district no building or premises shall be used, and no building shall be erected which is arranged, intended or designed to be used, for any of the following specified trades, industries or uses:

- (1) Ammonia, chlorine or bleaching powder manufacture.
- (2) Asphalt manufacture or refining.
- (3) Assaying (other than gold or silver).
- (4) Blacksmithing or horseshoeing.
- (5) Boiler making.
- (6) Brewing or distilling of liquors.
- (7) Carpet cleaning.
- (8) Celluloid manufacture.
- (9) Crematory.
- (10) Distillation of coal, wood or bones.
- (11) Dyeing or dry cleaning.
- (12) Electric central station power plant.
- (13) Fat rendering.
- (14) Fertilizer manufacture.
- (15) Garage for more than five motor vehicles, not including a warehouse where motor vehicles are received for dead storage only, and not including a sales-room where motor vehicles are kept for sale or for demonstration purposes only.
- (16) Gas (illuminating or heating) manufacture or storage.
- (17) Glue, size and gelatine manufacture.
- (18) Incineration or reduction of garbage, offal, dead animals or refuse.
- (19) Iron, steel, brass or copper works.
- (20) Junk, scrap paper or rag storage or baling.
- (21) Lamp black manufacture.
- (22) Lime, cement or plaster of paris manufacture.
- (23) Milk bottling and distributing station.
- (24) Oil cloth or linoleum manufacture.
- (25) Paint, oil, varnish or turpentine manufacture.
- (26) Petroleum refining or storage.
- (27) Printing ink manufacture.
- (28) Raw hides or skins—storage, curing or tanning.
- (29) Repair shop for motor vehicles.
- (30) Rubber manufacture from the crude material.
- (31) Saw or planing mill.
- (32) Shoddy manufacture or wool scouring.
- (33) Slaughtering of animals.
- (34) Smelting.
- (35) Soap manufacture.
- (36) Stable for more than five horses.
- (37) Starch, glucose or dextrine manufacture.
- (38) Stock yard.
- (39) Stone or monumental works.
- (40) Sugar refining.
- (41) Sulphurous, sulphuric, nitric or hydrochloric acid manufacture.
- (42) Tallow, grease or lard manufacturing or refining.
- (43) Tar distillation or manufacture.
- (44) Tar roofing or tar waterproofing manufacture.
- (45) Refrigerating plants, coal yards and coal pockets.
- (46) Gasoline service station.

(b) In a business district no building or premises shall be used, and no building shall be erected, which is arranged, intended or designed to be used for any trade, industry or use that is noxious or offensive by reason of the emission of odor, dust, smoke, gas or noise but car barns or places of amusement shall not be excluded.

(c) In a business district no building or premises shall be used, and no building shall be erected, which is arranged, intended or designed to be used for any kind of manufacturing, except that any kind of manufacturing not included within the prohibitions of paragraphs a and b of this section may be carried on provided not more than 25 per cent. of the total floor space of the building is so used, but space equal to the area of the lot may be so used in any case, although in excess of said 25 per cent. The printing of a

newspaper shall not be deemed manufacturing. No use permitted in a residence district by section 3 shall be excluded from a business district.

§ 5. *Unrestricted Districts.* The term "unrestricted district" is used to designate the districts for which no regulations or restrictions are provided by this article.

§ 6. *Existing Buildings and Premises.* (a) Any use existing in any building or premises on July 25, 1916, and not conforming to the regulations of the use district in which it is maintained, may be continued therein. No then existing building designed, arranged, intended or devoted to a use not permitted by this article in the district in which such use is located shall be enlarged, extended, reconstructed or structurally altered unless such use is changed to a use permitted in the district in which such building is located. Such building may, however, be reconstructed or structurally altered to an extent not greater than 50 per cent. of the value of the building, exclusive of foundations, provided that no use in such building is changed or extended, except as authorized in paragraph b of this section, and provided, further, that no use included in any one of the enumerated subdivisions of paragraph a of section 4 is changed into a use included in any other enumerated subdivision of paragraph a of section 4 or into a use prohibited by paragraph b of section 4, and also provided that no use prohibited by paragraph b of section 4 is changed into another use prohibited by paragraph b of section 4 or into a use included in an enumerated subdivision of paragraph a of section 4.

(b) Any use existing in any building or premises on July 25, 1916, and not conforming to the regulations of the use district in which it is maintained may be changed, and such use may be extended throughout the building, provided that in either case:

(1) No structural alterations shall be made in the building, except as authorized by paragraph a of this section, and

(2) In a residence district no portion of a building devoted to a use included in subdivision 1 of section 3 shall be changed to any use prohibited in a residence district, and

(3) In a residence district no building or premises, unless devoted to one of the uses that is by section 4 prohibited in a business district, shall be changed to any of such uses, and

(4) In a residence or business district no building or part thereof and no premises, unless devoted to one of the uses that is by paragraph a or b of section 4 prohibited in a business district, shall be changed to any of such uses.

If a use is changed as authorized in this section, the new use may thereafter be changed, subject to the limitations imposed by subdivisions 1, 2, 3 and 4 of this paragraph.

§ 7. *Use District Exceptions.* The Board of Appeals, created by chapter 503 of the laws of 1916, may, in appropriate cases, after public notice and hearing, and subject to appropriate conditions and safeguards, determine and vary the application of the use district regulations herein established in harmony with their general purpose and intent as follows:

(a) Permit the extension of an existing building and the existing use thereof upon the lot occupied by such building at the time of the passage of this resolution or permit the erection of an additional building upon a lot occupied at the time of the passage of this resolution by a commercial or industrial establishment and which additional building is a part of such establishment;

(b) Where a use district boundary line divides a lot in a single ownership at the time of the passage of this resolution, permit a use authorized on either portion of such lot to extend to the entire lot, but not more than 25 feet beyond the boundary line of the district in which such use is authorized;

(c) Permit the extension of an existing or proposed building into a more restricted district under such conditions as will safeguard the character of the more restricted district;

NOTICE

(d) Permit in a residence district a central telephone exchange or any building or use in keeping with the uses expressly enumerated in section 3 as the purposes for which buildings or premises may be erected or used in a residence district;

(e) Permit in a business district the erection or extension of a garage or stable in any portion of a street between two intersecting streets in which portion there exists a garage for more than five motor vehicles or a stable for more than five horses which existed on July 25, 1916.

(f) Grant in undeveloped sections of the city temporary and conditional permits for not more than two years for structures and uses in contravention of the requirements of this article.

(g) Permit in a business or residence district the erection of a garage provided the petitioner files the consents duly acknowledged of the owners of 80 per cent. of the frontage deemed by the Board to be immediately affected by the proposed garage. Such permit shall specify the maximum size or capacity of the garage and shall impose appropriate conditions and safeguards upon the construction and use of the garage.

Article III—Height Districts.

§ 8. *Height Districts.* For the purpose of regulating and limiting the height and bulk of buildings hereafter erected, the City of New York is hereby divided into eight classes of districts: (a) one-quarter times districts; (b) one-half times districts; (c) three-quarter times districts; (d) one times districts; (e) one and one-quarter times districts; (f) one and one-half times districts; (g) two times districts; (h) two and one-half times districts; as shown on the amended height district map which accompanies this resolution and is hereby declared to be part hereof. The height districts designated on said amended map, consisting of thirty-five sheets and an index sheet, each dated July 1, 1924, and signed by the Chief Engineer of the Board of Estimate and Apportionment, are hereby established. The amended height district map designations and amended map designation rules which accompany said amended height district map are hereby declared to be part thereof. No building or part of a building shall be erected except in conformity with the regulations herein prescribed for the height district in which such building is located.

(a) In a one-quarter times district no building shall be erected to a height in excess of one-quarter times the width of the street, but for each two feet that the building or a portion of it sets back from the street line one foot shall be added to the height limit of such building or such portion thereof.

(b) In a one-half times district no building shall be erected to a height in excess of one-half times the width of the street, but for each one foot that the building or a portion of it sets back from the street line one foot shall be added to the height limit of such building or such portion thereof.

(c) In a three-quarter times district no building shall be erected to a height in excess of three-quarter times the width of the street, but for each one foot that the building or a portion of it sets back from the street line one foot shall be added to the height limit of such building or such portion thereof.

(d) In a one times district no building shall be erected to a height in excess of the width of the street, but for each one foot that the building or a portion of it sets back from the street line two feet shall be added to the height limit of such building or such portion thereof.

(e) In a one and one-quarter times district no building shall be erected to a height in excess of one and one-quarter times the width of the street, but for each foot that the

building or a portion of it sets back from the street line two and one-half feet shall be added to the height limit of such building or such portion thereof.

(f) In a one and one-half times district no building shall be erected to a height in excess of one and one-half times the width of the street, but for each one foot that the building or a portion of it sets back from the street line three feet shall be added to the height limit of such building or such portion thereof.

(g) In a two times district no building shall be erected to a height in excess of twice the width of the street, but for each one foot that the building or a portion of it sets back from the street line four feet shall be added to the height limit of such building or such portion thereof.

(h) In a two and one-half times district no building shall be erected to a height in excess of two and one-half times the width of the street, but for each one foot that the building or a portion of it sets back from the street line five feet shall be added to the height limit of such building or such portion thereof.

§ 9. *Height District Exceptions.* (a) On streets less than 50 feet in width the same height regulations shall be applied as on streets 50 feet in width and, except for the purposes of paragraph d of this section, on streets more than 100 feet in width the same height regulations shall be applied as on streets 100 feet in width.

(b) Along a narrower street near its intersection with a wider street, any building or any part of any building fronting on the narrower street within 100 feet, measured at right angles to the side of the wider street, shall be governed by the height regulations provided for the wider streets. A corner building on such intersecting streets shall be governed by the height regulations provided for the wider street for 150 feet from the side of such wider street, measured along such narrower street.

(c) Above the height limit at any level for any part of a building a dormer, elevator bulkhead or other structure may be erected provided its frontage length on any given street be not greater than 60 per cent. of the length of such street frontage of such part of the building. Such frontage length of such structure at any given level shall be decreased by an amount equal to one per cent. of such street frontage of such part of the building for every foot such level is above such height limit. If there are more than one such structure, their aggregate frontage shall not exceed the frontage length above permitted at any given level.

(d) If the area of the building is reduced so that above given level it covers in the aggregate not more than 25 per cent. of the area of the lot, the building above such level shall be excepted from the foregoing provisions of this article. Such portion of the building may be erected to any height, provided that the distance which it sets back from the street line on each street on which it faces, plus half of the width of the street, equals at least 75 feet. But for each one per cent. of the width of the lot on the street line that such street wall is less in length than such width of the lot, such wall may be erected four inches nearer to the street line.

(e) When at the time plans are filed for the erection of a building there are buildings in excess of the height limits herein provided within 50 feet of either end of the street frontage of the proposed building or directly opposite such building across the street, the height to which the street wall of the proposed building may rise shall be increased by an amount not greater than the average excess height of the walls on the street line within 50 feet of either end of the street frontage of the proposed building and at right angles to the street frontage of the proposed building on the opposite side of the street. The average amount of such excess height shall be computed by adding together the excess heights above the prescribed height limit for the street frontage in question of all of the walls on the street line of the buildings and parts of buildings within the above defined

NOTICE

frontage and dividing the sum by the total number of buildings and vacant plots within such frontage.

(f) Nothing in this article shall prevent the projection of cornice beyond the street wall to an extent not exceeding five per cent. of the width of the street nor more than five feet in any case. Nothing in this article shall prevent the projection above the height limit of a parapet wall or cornice solely for ornament and without windows extending above such height limit not more than five per cent. of such height limit, but such parapet wall or cornice may in any case be at least five and one-half feet high above such height limit.

(g) The provisions of this article shall not apply to the projection of church spires, belfries, chimneys, flues or gas holders.

(h) Where not more than 50 feet of a street frontage could otherwise be subjected to a height limit lower than that allowed immediately beyond both ends of such frontage, the height limit on such frontage shall be equal to the lesser of such greater height limits.

(i) If an additional story or stories are added to a building existing at the time of the passage of this resolution, the existing walls of which are in excess of the height limits prescribed in this article, the height limits for such additional story or stories shall be computed from the top of the existing walls as though the latter were not in excess of the prescribed height limits and the carrying up of existing elevator and stair enclosures shall be exempted from the provisions of this article.

Article IV—Area Districts.

§ 10. *Area Districts.* For the purpose of regulating and determining the area of yards, courts and other open spaces or buildings hereafter erected, the City of New York is hereby divided into six classes of area districts: A, B, C, D, E and F; as shown on the amended area district map which accompanies this resolution and is hereby declared to be part hereof. The area districts designated on said amended map, consisting of thirty-five sheets and an index sheet, each dated July 1, 1924, and signed by the Chief Engineer of the Board of Estimate and Apportionment, are hereby established. The amended area district map designations and amended map designation rules which accompany said amended area district map are hereby declared to be a part hereof. No building or part of a building shall be erected except in conformity with the regulations herein prescribed for the area district in which such building is located. Unless otherwise expressly provided the term rear yard, side yard, outer court or inner court when used in this article shall be deemed to refer only to a rear yard, side yard, outer court or inner court required by this article. No lot area shall be so reduced or diminished that the yards, courts or open spaces shall be smaller than prescribed in this article.

§ 11. *A Districts.* In an A district a court at any given height shall be at least one inch in least dimension for each one foot of such height.

§ 12. *B District.* In a B district a rear yard at any given height shall be at least two inches in least dimension for each one foot of such height. The depth of a rear yard at its lowest level shall be at least 10 per cent. of the depth of the lot, but need not exceed 10 feet at such level. An outer court or a side yard at any given height shall be at least one inch in least dimension for each one foot of such height. An outer court at any given point shall be at least one and one-half inches in least dimension for each one foot of length. But for each one foot that an outer court at any given height would, under the above rules, be wider in its least dimension for such height than the minimum required by its length, one inch shall be deducted from the required least dimension for such height for each 24 feet of such height. A side yard for its length within 50 feet of the street may for the purposes of the above rule be considered an outer court.

§ 13. *C Districts.* (a) In a C district a rear yard at any given height shall be at least three inches in least dimension

for each one foot of such height. The depth of a rear yard at its lowest level shall be at least 10 per cent. of the depth of the lot, but need not exceed 10 feet at such level. An outer court or a side yard at any given height shall be at least one and one-half inches in least dimension for each one foot of such height. An outer court at any given point shall be at least one and one-half inches in least dimension for each one foot of length. On a lot not more than 30 feet in mean width an outer court or a side yard at any given height shall be not less than one inch in least dimension for each one foot of such height, and an inner court at any given height shall be either (1) not less than two inches in least dimension for each one foot of such height or (2) it shall be of an equivalent area as hereinafter specified in paragraph c of section 18.

(b) If the owner or owners of any part of a C district set aside perpetually for the joint recreational use of the residents of such part designated by them, an area at least equal to 10 per cent. of the area of such part in addition to all yard and court requirements for a B district, such part shall be subject to the regulations herein prescribed for a B district. Such joint recreational space shall be composed of one or more tracts, each of which shall be at least 40 feet in least dimension and 5,000 square feet in area and shall be approved by the Board of Appeals as suitable for the joint recreational use of such residents.

§ 14. *D Districts.* (a) In a D district a rear yard at any given height shall be at least four inches in least dimension for each one foot of such height. The depth of a rear yard at its lowest level shall be at least 10 per cent. of the depth of the lot, but need not exceed 10 feet at such level. If a building in a D district is located in a residence district as designated on the amended use district map, the depth of a rear yard at its lowest level shall be at least 20 per cent. of the depth of the lot, but need not exceed 20 feet at such level. However, for each one foot in excess of 10 feet of the depth of such rear yard at its lowest level, there may be substituted one foot of depth of unoccupied space across the whole width of the front of the lot at the curb level between the street line and the street wall of the building.

(b) In a D district an outer court or a side yard at any given height shall be at least two inches in least dimension for each one foot of such height. An outer court at any given point shall be at least two inches in least dimension for each one foot of length. On a lot not more than 30 feet in mean width an outer court or a side yard at any given height shall be not less than one and one-half inches in least dimension for each one foot of such height. On such lot an outer court at any given point shall be not less than one and one-half inches in least dimension for each one foot of length. On such lot an inner court at any given height shall be either (1) not less than three inches in least dimension for each one foot of such height or (2) it shall be of an equivalent area as specified in paragraph c of section 18.

(c) In a D district no building located within a residence district as designated on the amended use district map shall occupy at the curb level more than 60 per cent. of the area of the lot, if an interior lot, or 80 per cent. if a corner lot. In computing such percentage any part of the area of any corner lot in excess of 8,000 square feet shall be considered an interior lot.

(d) If the owner or owners of any part of a D district set aside perpetually for the joint recreational use of the residents of such part designated by them, an area at least equal to 10 per cent. of the area of such part in addition to all yard and court requirements for a C district, such part shall be subject to the regulations herein prescribed for a C district. Such joint recreational space shall be composed of one or more tracts, each of which shall be at least 40 feet in least dimension and 5,000 square feet in area and shall be approved by the Board of Appeals as suitable for the joint recreational use of such residents.

NOTICE

§ 15. *E Districts.* (a) In an E district a rear yard at any given height shall be at least five inches in least dimension for each one foot of such height. The depth of a rear yard at its lowest level shall be at least 15 per cent. of the depth of the lot, but need not exceed 15 feet at such level. If a building in an E district is located in a residence district as designated on the amended use district map, the depth of a rear yard at its lowest level shall be at least 25 per cent. of the depth of the lot, but need not exceed 25 feet at such level. However, for each one foot in excess of 10 feet of the depth of such rear yard at its lowest level, there may be substituted one foot of depth of unoccupied space across the whole width of the front of the lot at the curb level between the street line and the street wall of the building. In an E district on at least one side of every building located within a residence district there shall be a side yard along the side lot line for the full depth of the lot or back to the rear yard.

(b) In an E district an outer court or side yard at any given height shall be at least two and one-half inches in least dimension for each one foot of such height. On a lot not more than 50 feet in mean width an outer court or a side yard at any given height shall be at least two inches in least dimension for each one foot of such height. An outer court at any given point shall be at least two and one-half inches in least dimension for each one foot of length.

(c) In an E district no building located within a residence district as designated on the amended use district map shall occupy at the curb level more than 50 per cent. of the area of the lot, if an interior lot, or 70 per cent. if a corner lot, and above a level 18 feet above the curb no building shall occupy more than 30 per cent. of the area of the lot, if an interior lot, or 40 per cent. if a corner lot. In computing such percentage any part of the area of any corner lot in excess of 8,000 square feet shall be considered an interior lot.

(d) In an E district no portion of any building shall be erected nearer than 10 feet to the line of any street as laid out upon the City map.

§ 16. *F Districts.* (a) In an F district no portion of any building shall be erected nearer than 15 feet to the building line of any street.

(b) In an F district a rear yard at any given height shall be at least six inches in least dimension for each one foot of such height. The depth of a rear yard at its lowest level shall be at least 20 per cent. of the depth of the lot, but need not exceed 20 feet at such level. Excepting that if a building in an F district is located in a residence district as designated on the amended use district map, the depth of a rear yard at its lowest level shall be at least 30 per cent. of the depth of the lot, but need not exceed 30 feet at such level. However, for each one foot in excess of 15 feet of the depth of such rear yard at its lowest level there may be substituted one foot of additional depth of unoccupied space to that hereinbefore provided across the whole width of the front of the lot at the curb level between the street line and the street wall of the building. In an F district, on both sides of every dwelling there shall be a side yard along the side lot line for the full depth of the lot or back to the rear yard. For every residential building located in a residence district both sides of such building shall be capable of being afforded direct light, air and access upon such side yards, for its entire length.

(c) In an F district an outer court or side yard at any given height shall be at least three inches in least dimension for each one foot of such height, excepting that on a lot not more than 50 feet in mean width an outer court or a side yard at any given height shall be at least two and one-half inches in least dimension for each one foot of such height. An outer court at any given point shall be at least three inches in least dimension for each one foot of length.

(d) In an F district no building shall occupy at the curb level more than 35 per cent. of the area of the lot, if an interior lot, or 50 per cent. if a corner lot, and above a level 18 feet above the curb no building shall occupy more than 25

per cent. of the area of the lot, if an interior lot, or 30 per cent. if a corner lot, exclusive in each case of garages. In computing such percentage any part of the area of any corner lot in excess of 6,000 square feet shall be considered an interior lot.

§ 17. *Rear Yards.* (a) Except in A districts, for lots or portions of lots that are back to back there shall be rear yards extending along the rear lot lines of such lots or portions of lots wherever they are more than 55 feet back from the nearest street. Such rear yard shall be at least of the area and dimensions herein prescribed for the area district in which it is located at every point along such rear lot line. Within 55 feet of the nearest street no rear yards shall be required, except in F area districts. No rear yard shall be required on any corner lot nor, excepting in an F area district, on the portion of any lot that is back to back with a corner lot.

(b) Where a building is not within a residence district as designated on the amended use district map, the lowest level of a rear yard shall not be above the sill level of the second story windows, nor in any case more than 23 feet above the curb level. Where a building is within a residence district the lowest level of a rear yard shall not be above the curb level, except that not more than 40 per cent. of the area of the yard may be occupied by the building up to a level 18 feet above the curb level. In the case of a church, whether within or without a residence district, such 40 per cent. may be occupied up to a level of 30 feet above the curb level.

(c) Chimneys or flues may be erected within a rear yard provided they do not exceed five square feet in area in the aggregate and do not obstruct ventilation.

(d) Except in A districts, where a building on an interior lot between lots for which rear yards are required runs through the block from street to street or to within 55 feet of another street, there shall be on each side lot line above the sill level of the second story windows and in any case above a level 23 feet above the curb level a court of at least equivalent area at any given height to that required for an inner court at such height and having a least dimension not less than that required for an outer court at the same height.

(e) When a proposed building is on a lot which is back to back with a lot or lots on which there is a building or buildings having rear yards less in depth than would be required under this article, the depth of the rear yard of the proposed building shall not be required to be greater at any given level than the average depth of the rear yards directly back to back with it at such level, but in no case shall the depth of such rear yard be less at any height than the least dimension prescribed for an outer court at such height.

§ 18. *Courts.* (a) If a room in which persons live, sleep, work or congregate receives its light and air in whole or in part directly from an open space on the same lot with the building, there shall be at least one inner court, outer court, side yard or rear yard upon which a window or ventilating skylight opens from such room. Such inner court, outer court or side yard shall be at least of the area and dimensions herein prescribed for the area district in which it is located. Such rear yard shall be at least of the area and dimensions herein prescribed for an inner court in the area district in which it is located. In an A district, such inner court, outer court, side yard or rear yard shall be at least of the area and dimensions herein prescribed for a court in such district. The unoccupied space within the lot in front of every part of such window shall be not less than three feet, measured at right angles thereto. Courts, yards and other open spaces, if provided in addition to those required by this section, need not be of the area and dimensions herein prescribed. The provisions of this section shall not be deemed to apply to courts or shafts for bathrooms, toilet compartments, hallways or stairways.

(b) The least dimension of an outer court, inner court or side yard at its lowest level shall be not less than four feet, subject to the following exceptions:

(1) Where the walls bounding a side yard within the lot are more than 25 feet in mean height and not more than 40

NOTICE

in length such least dimension may be not less than feet.

) In an E district such least dimension shall be four

) In an F district such least dimension shall be five feet.

) Where any outer court opens on a street such street be considered as part of such court.

) The least dimension of an inner court at any given shall be not less than that which would be required in for each one foot of height for a rear yard of the height, except that an inner court of equivalent area be substituted for said court, provided that for such its least dimension be not less than one-half of its test dimension. If an inner court is connected with a by a side yard, for each one foot that such side yard ss than 65 feet in depth from the street, one square foot be deducted from the required area of the inner court each 15 feet of height of such court. If the lot is not ired under this resolution to have a rear yard, an outer t, not opening on a street, shall open at any level on an r court on the rear line of the lot and such inner court l be deemed a rear yard in such case.

19. *Area District Exceptions.* (a) The area required in ert or yard at any given level shall be open from such l to the sky unobstructed, except for the ordinary pro- ions of skylights and parapets above the bottom of such t or yard, and except for the ordinary projections of dow sills, belt courses, cornices and other ornamental ures to the extent of not more than four inches. How- , where a side yard or an outer court opens on a street cornice may project not over five feet into such side yard nder court within five feet of the street wall of the build-

And provided that in an E district a one-family resi- ce, detached on all sides and having on one side a side d of a clear and unobstructed width of not less than five eet 6 inches into a side yard on the opposite side, with further provision that in an F district such cornice or e, or a porte-cochere having a height of less than 18 feet, r project not more than 3 feet into both side yards.

b) An open or lattice enclosed iron fire escape, fireproof side stairway or solid-floored balcony to a fire tower may ject not more than 4 feet into a rear yard or an inner rt, except that an open or lattice enclosed iron fire escape y project not more than 8 feet into a rear yard or into inner court when it does not occupy more than 20 per t. of the area of such inner court.

c) A corner of a court or yard may be cut off between lls of the same building provided that the length of the ll of such cut-off does not exceed 7 feet.

d) An offset to a court or yard may be considered as a t of such court or yard provided that it is no deeper in r part than it is wide on the open side and that such open e be in no case less than 6 feet wide.

e) If a building is erected on the same lot with another lding the several buildings shall, for the purpose of this icle, be considered as a single building, unless otherwise ein specifically provided for. Any structure, whether in- pendent of or attached to a building, shall for the purposes this article be deemed a building or a part of a building.

f) If an additional story or stories are added to a build- g existing at the time of the passage of this resolution, e courts and yards of which do not conform to the re- irements of this article, the least dimensions of yards and rts shall be increased from the top of the existing yard court walls, as though they were of the prescribed dimen- ns at such heights and the carrying up of existing elevator d stair enclosures shall be exempted from the provisions this article.

Article V—General and Administrative.

§ 20. *Interpretation; Purpose.* In interpreting and apply- g the provisions of this resolution, they shall be held to be e minimum requirements adopted for the promotion of the blic health, safety, comfort, convenience and general wel-

fare. It is not intended by this resolution to repeal, abrogate, annul or in any way to impair or interfere with any existing provision of law or ordinance or any rules, regulations or permits previously adopted or issued or which shall be adopted or issued pursuant to law relating to the use of build- ings or premises; nor is it intended by this resolution to interfere with or abrogate or annul any easements, cove- nants or other agreements between parties; provided, how- ever, that where this resolution imposes a greater restriction upon the use of buildings or premises or upon height of build- ings or requires larger yards, courts or other open spaces than are imposed or required by such existing provision of law or ordinance or by such rules, regulations or permits or by such easements, covenants or agreements, the provisions of this resolution shall control.

§ 21. *Rules and Regulations; Modifications of Provisions.* The Board of Standards and Appeals, created by chapter 503 of the Laws of 1916, shall adopt from time to time such rules and regulations as they may deem necessary to carry into effect the provisions of this resolution. Where there are practical difficulties or unnecessary hardships in the way of carrying out the strict letter of the provisions of this resolution the Board of Appeals shall have power in a spe- cific case to vary any such provision in harmony with its general purpose and intent, so that the public health, safety and general welfare may be secured and substantial justice done. Where the street layout actually on the ground varies from the street layout as shown on the amended use, height or area district map, the designation shown on the mapped areas shall be applied by the Board of Appeals to the un- mapped streets in such a way as to carry out the intent and purpose of the plan for the particular section in question. Before taking any action authorized in this section the Board of Appeals shall give public notice and hearing.

No garage for more than five cars may be erected or ex- tended and no building not now used as a garage for more than five cars may have its use changed to a garage for more than five cars on any portion of a street between two inter- secting streets, in which portion there exists an exit from or an entrance to a public school; or in which portion there exists any hospital maintained as a charitable institution; and in no case within a distance of 200 feet from the nearest exit from or entrance to a public school; nor within 200 feet of any hospital maintained as a charitable institution. This protection shall also apply to duly organized schools for children under 16 years of age, giving regular instruction at least five days a week for eight months or more each year, owned and operated by any established religious body or edu- cational corporation. This limitation on the location of garages shall apply to unrestricted as well as business and residence districts.

No gasoline service station may be erected or extended on any portion of a street between two intersecting streets, in which portion there exists an exit from or an entrance to a public school; and in no case within a distance of 200 ft. from the nearest exit from or entrance to a public school. This protection shall also apply to duly organized schools for children under 16 years of age, giving regular instruction at least five days a week for eight months or more each year, owned and operated by any established religious body or educational corporation.

§ 22. *Unlawful Use; Certificate of Occupancy.* It shall be unlawful to use or permit the use of any building or prem- ises or part thereof hereafter created, erected, changed or converted wholly or partly in its use or structure until a certificate of occupancy to the effect that the building or premises or the part thereof so created, erected, changed or converted and the proposed use thereof conform to the pro- visions of this resolution shall have been issued by the su- perintendent of buildings of the borough in which such build- ing or premises is located, or, in the case of a tenement house as defined in the Tenement House Law, by the tene- ment house commissioner. In the case of such buildings or premises it shall be the duty of the superintendent of build- ings or the tenement house commissioner, as the case may

NOTICE

be, to issue a certificate of occupancy within ten days after a request for the same shall be filed in his office by any owner of a building or premises affected by this resolution, provided said building or premises, of the part thereof so created, erected, changed or converted and the proposed use thereof conform with all the requirements herein set forth. Under rules and regulations of the Board of Standards and Appeals a temporary certificate of occupancy for a part of a building may be issued by the superintendent of buildings or the tenement house commissioner, as the case may be. Upon written request from the owner, the superintendent of buildings or the tenement house commissioner, as the case may be, shall issue a certificate of occupancy for any building or premises existing at the time of the passage of this resolution certifying after inspection the use of the building or premises and whether such use conforms to the provisions of this resolution.

§ 23. *Enforcement, Legal Procedure, Penalties.* This resolution shall be enforced by the tenement house commissioner and by the superintendent of buildings in each borough, under the rules and regulations of the Board of Standards and Appeals.

The tenement house commissioner shall enforce said regulations in so far as they affect or relate to tenement houses as defined by the tenement house law. The superintendent of buildings shall in each borough enforce said regulations in so far as they relate to buildings or premises other than tenement houses. Each of said officers within his jurisdiction is empowered to cause any building, structure, place or premises to be inspected and examined and to order in writing the remedying of any condition found to exist therein or thereat in violation of any provision of the building zone resolution adopted by the board of estimate and apportionment on the twenty-fifth day of July, nineteen hundred and sixteen, and as subsequently amended. Such order may be served in the same manner as provided in section seven hundred and seventy-five of the Greater New York Charter for the service of orders by the fire commissioner.

The owner or general agent of a building or premises where a violation of any provision of said building zone resolution has been committed or shall exist, or the lessee or tenant of an entire building or entire premises where such violation has been committed or shall exist or the owner, general agent, lessee or tenant of any part of the building or premises in which such violation has been committed or shall exist or the general agent, architect, builder, contractor, or any other person who commits, takes part or assists in any such violation or who maintains any building or premises or any part thereof in which any violation shall exist shall be guilty of a misdemeanor.

Any such person who having been served with an order

to remove any such violation shall fail to comply with said order within ten days after such service or shall continue to violate any provision of the said building zone resolution in the respect named in such order shall be guilty of a misdemeanor.

In addition to the foregoing remedies the City of New York by the Corporation Counsel may maintain an action for an injunction to restrain any violation of the said building zone resolution.

§ 24. *Amendments, Alterations and Changes in District Lines.* The Board of Estimate and Apportionment may from time to time on its own motion or on petition, after public notice and hearing, amend, supplement or change regulations and districts herein established. Whenever owners of 50 per cent. or more of the frontage in any district or part thereof shall present a petition duly signed and acknowledged to the Board of Estimate and Apportionment requesting an amendment, supplement, change or repeal of the regulations prescribed for such district or part thereof it shall be the duty of the Board to vote upon said petition within 90 days after the filing of the same by the petitioner with the secretary of the Board. If, however, a protest against such amendment, supplement or change be presented duly signed and acknowledged by the owners of 20 per cent. or more of any frontage proposed to be altered, or by the owners of 20 per cent. of the frontage immediately in the rear thereof, or by the owners of 20 per cent. of the frontage directly opposite the frontage proposed to be altered, such amendment shall not be passed except by the unanimous vote of the Board. If any area is hereafter transferred to another district by a change in district boundaries by amendment, as above provided, the provisions of this resolution in regard to buildings or premises existing at the time of the passage of this resolution shall apply to buildings or premises existing at the time of passage of such amendment in such transferred area.

§ 25. *Restoration of Existing Buildings.* Nothing in this resolution shall prevent the restoration of a building wholly or partly destroyed by fire, explosion, act of God or act of the public enemy or prevent the continuance of the use of such building or part thereof as such use existed at the time of such destruction of such building or part thereof or prevent a change of such existing use under the limitations provided in section 6. Nothing in this resolution shall prevent the restoration of a wall declared unsafe by the superintendent of buildings or by a board of survey.

§ 26. *When Effective.* The zoning resolution of July 1, 1916, and all amendments thereto are hereby declared superseded by this resolution, which shall take effect immediately.

NOTICE

APPENDIX—MAP DESIGNATIONS AND MAP DESIGNATION RULES ACCOMPANYING AMENDED BUILDING ZONE RESOLUTION.

(Adopted October 3, 1924)

AMENDED HEIGHT DISTRICT MAP DESIGNATIONS.

———— indicates the boundary of a Height District.
(1/4) (1/2) (3/4) (1) (1 1/4) (1 1/2) (2) (2 1/2) are symbols for district classifications as defined in the zoning resolution.

AMENDED HEIGHT DISTRICT MAP DESIGNATION RULES.

1. An area surrounded by a district boundary line shall be in the Height District designated therein, except as otherwise provided by these rules.

2. The boundaries of Height Districts shall be the limiting line to which the regulations provided in any given district may be availed of.

3. The precise location of a boundary line is to be interpreted as follows:

(a) In cases where the district boundary is within a block and extends along the direction of the length thereof and no fixtures are shown, said boundary shall be deemed located 100 feet from the bounding street lying within the less restrictive district.

(b) In cases where the district boundary is within a block and extends along the direction of the width thereof and no fixtures are shown, said boundary shall be deemed located 100 feet from the nearest street.

(c) In cases where the boundary line is shown as being located a specific distance from a street line, this distance shall control.

(d) In cases where the boundary line is given a position within a street, it shall be deemed to be in the center of the street.

(e) In cases where a boundary line is shown along a railroad, such boundary shall be deemed to be the center line of the railroad right of way.

(f) In cases of navigable waters, the boundary line, unless otherwise fixed, shall be deemed to coincide with the pierhead line, except in cases where no pierhead line has been established, when the shore line shall govern.

(g) Any island outside of the shore or pierhead line unless otherwise designated, shall be deemed to be in 1 1/2-times height district.

NOTICE

AMENDED AREA DISTRICT MAP DESIGNATIONS.

— — — — — indicates the boundary of an Area District.

(B) (C) (D) (E) (F) are symbols for district classifications as defined in the zoning resolution.

AMENDED AREA DISTRICT MAP DESIGNATION RULES.

An area surrounded by a district boundary line shall be the Area District designated therein, except as otherwise provided by these rules.

The boundaries of Area Districts shall be the limiting to which the regulations provided in any given district may be availed of.

The precise location of a boundary line is to be interpreted as follows:

(a) In cases where the district boundary is within a block and extends along the direction of the length thereof and fixtures are shown, said boundary shall be deemed located 100 feet from the bounding street lying within the less restrictive district.

(b) In cases where the district boundary is within a block and extends along the direction of the width thereof and no fixtures are shown, said boundary shall be deemed located 100 feet from the nearest street.

(c) In cases where the boundary line is shown as being located a specific distance from a street line, this distance shall control.

(d) In cases where the boundary line is given a position within a street, it shall be deemed to be in the center of the street.

(e) In cases where a boundary line is shown as adjoining a railroad, unless otherwise fixed, it shall be deemed to coincide with the boundary line of the railroad right of way.

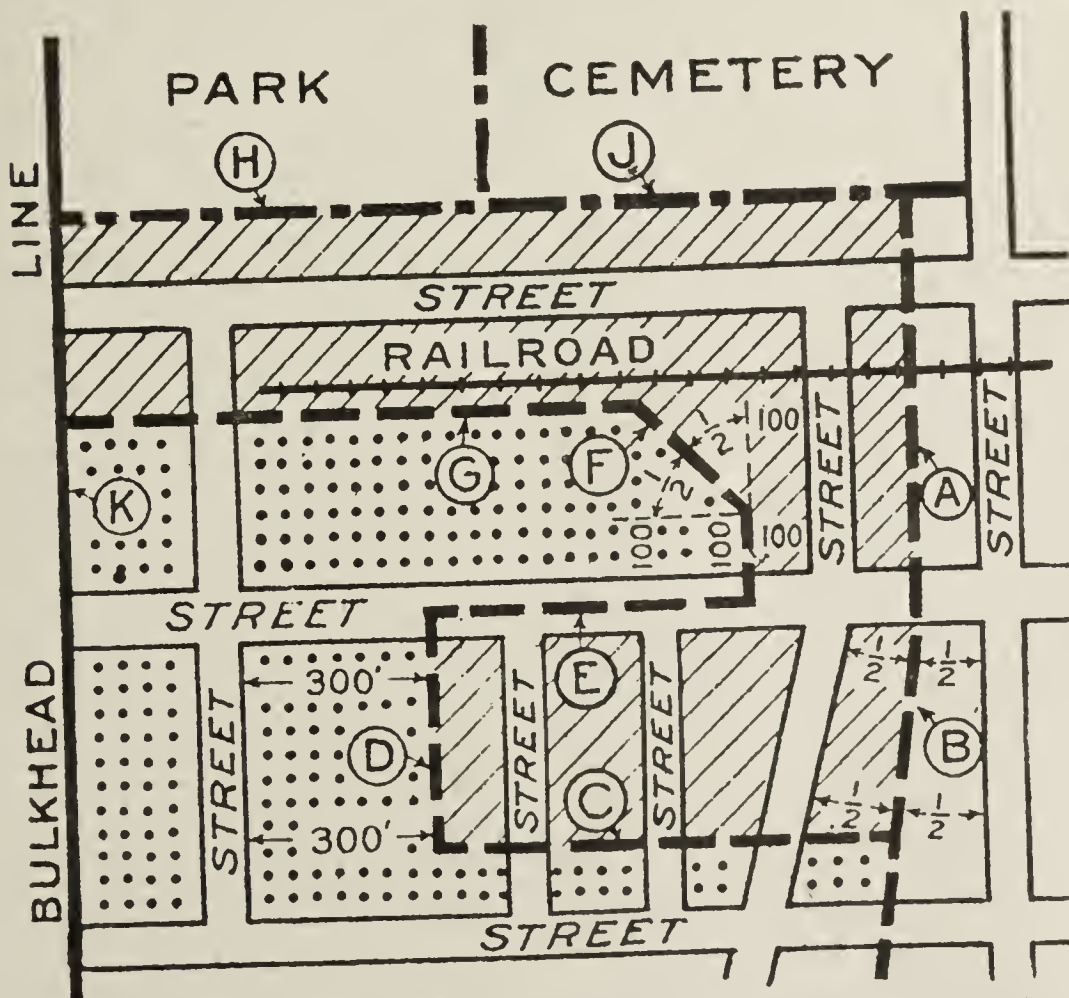

(f) In cases of navigable waters the boundary line, unless otherwise fixed, shall be deemed to coincide with the bulkhead line, except in cases where no bulkhead line has been established, when the shore line shall govern.

(g) Any island outside of the shore or bulkhead lines, unless otherwise designated, shall be deemed to be in an A district.

AMENDED USE DISTRICT MAP DESIGNATIONS.

— — — — — indicates the boundary of a Use District.
[Blank Box] indicates Residence District.
[Hatched Box] indicates Business District.
[Dotted Box] indicates Unrestricted District.
[Box with "UNDETERMINED"] indicates Undetermined District for which no restrictions or regulations as to use have been established.

Diagram Illustrating Methods Used in Fixing Boundaries of Use Districts.

AMENDED USE DISTRICT MAP DESIGNATION RULES.

1. In general Use Districts are intended to have a depth of 100 feet. Where block widths are less than 200 feet and

no fixtures are shown, the district boundary is intended to be 100 feet from the street to which the less restrictive designation relates.

NOTICE

2. The boundaries of Use Districts shall be the limiting line to which uses permissible in any given district may be availed of.

3. The precise location of a boundary line is to be interpreted as follows:

(a) In case of parallel streets, unless otherwise fixed, the Use District boundary shall coincide with the center line of the block.

(b) In case of streets which are not parallel, the Use District boundary, unless otherwise fixed, shall be construed as the bisector of the angle formed by prolonging the street lines to an intersection.

(c) In cases where a block has a length in excess of 200 feet and the boundary line is parallel with and nearer one of the bounding streets, unless otherwise fixed, its position shall be considered as distant 100 feet from the nearest street.

(d) In cases where the boundary line is shown as being located a specific distance from a street line, this distance shall control.

(e) In cases where the boundary line is given a position within a street, it shall be deemed to be in the center of the street.

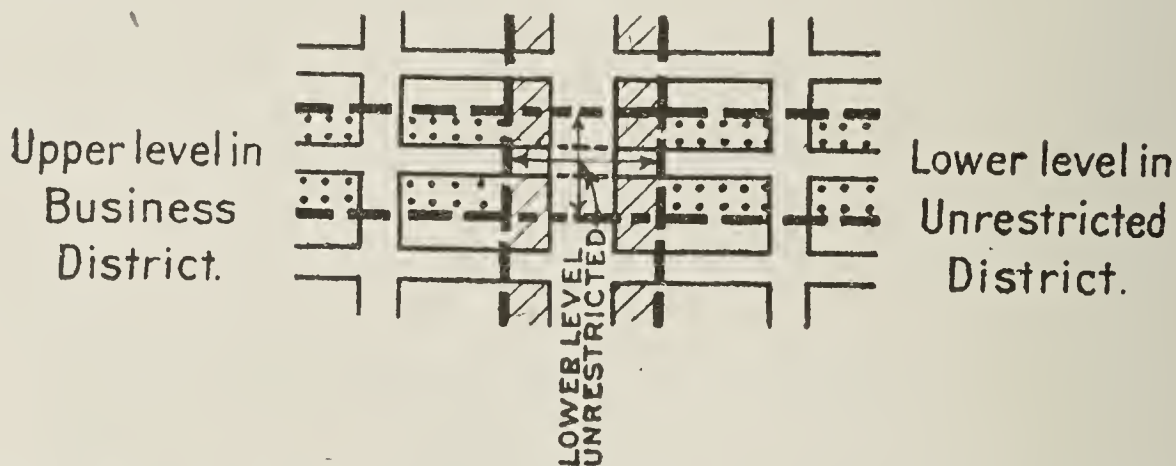

(f) In cases where a boundary line is shown as having a position oblique to the streets bounding the block in which it is located, unless otherwise fixed, it shall be deemed to be the bisector of the angle formed by intersecting lines 100 feet from and parallel with the bounding streets, the said distance being measured at right angles or normal to the street line.

(g) In cases where a boundary line is shown as adjoining a railroad, unless otherwise fixed, it shall be deemed to coincide with the boundary line of the railroad right of way.

(h-j-k) In cases of parks, cemeteries and navigable waters, the boundary line, unless otherwise fixed, shall be deemed to coincide with the boundary of the park, or cemetery, or the bulkhead line, except in cases where a bulkhead line has been established, when the shore line shall govern.

4. Where two streets cross at different levels, the use designation of the lower street shall control, except that where the use designation of the lower street is less restrictive it shall control only to the curb level of the higher street. Above the curb level of the higher street the more restrictive designation shall apply for a distance of 100 feet measured along the intersecting streets from each street corner.

Diagram Illustrating Two Level Streets.

BOARD OF STANDARDS AND APPEALS.

Appliances Submitted for Approval.

- 53-21-S—Angle Hose Valve.
- 1372-21-S—Ford Fire Line Reducing Valve, approval of.
- 337-22-S—Elkhard Brass Company, Siamese Connection, approval of.
- 357-22-S—Quinn Acme Crude Oil Burner, approval of.
- 392-22-S—The Surface-Combustion Company Low Pressure Gas and Oil Burner, approval of.
- 447-22-S—Howard Water Pressure Reducing Devices, approval of.
- 610-22-S—Crocker Gas Valve, approval of.
- 799-22-S—Kennell Gas Cut-Off Valve, approval of.
- 957-22-S—Burnwell Mechanical Burner, approval of.
- 1104-22-S—Dean Fuel Oil Pump, approval of.
- 1105-22-S—Combustion Fuel Oil Burner, approval of.
- 1173-22-S—Anti-Syphon Valve, approval of.
- 1230-22-S—Thermostats for Automatic Fire Alarm Systems, approval of.
- 1249-22-S—Coen Oil Burner, approval of.
- 1274-22-S—Rodriguez Oil Burner, approval of.

- 1391-22-S—Dempsey High & Low Pressure Fuel Oil Burner, approval of.
- 1395-22-S—Caloroil Burner, approval of.
- 1526-22-S—Delaney Fuel Oil Burner, approval of.
- 57-23-SA—Collin Patent Automatic Gas Cut-Off Valve, approval of.
- 92-23-SA—Surface Combustion Low Pressure Fuel Oil Burner, approval of.
- 123-23-SA—Todd Steam Atomizing Fuel Oil Burner, approval of.
- 124-23-SA—Master Gas Shut-Off Valve, approval of.
- 125-23-SA—Packless Gas Shut-Off Valve, approval of.
- 127-23-SA—S. & K. Gas Shut-Off Valve, approval of.
- 232-23-SA—Manual and Thermal Gas Cut-Off Valve.
- 275-23-SA—Wm. E. Toelle Manual & Automatic Gas Shut-Off Valve, approval of.
- 279-23-SA—Heil Standard 200 Gal. Truck Tank.
- 297-23-SA—"Automatic" Deluge Valve, approval of.
- 345-23-SA—Cornell Falat Oil Burner, approval of.
- 392-23-SA—"Billow" Class G. R. Oil Burner, approval of.

RESERVE CALENDAR

- 3-23-SA—"Billow" Class C. R. F. Oil Burner, approval of.
- 7-23-SA—Cornell No. 1 Type "A" Oil Burner, approval of.
- 13-23-SA—Automatic Gas Shut-Off, approval of.
- 25-23-SA—Tilman-White Gas Cut-Off Valve, approval of.
- 44-23-SA—Domestic Fuel Oil Burner, approval of.
- 88-23-SA—Lewis Oil Burner, approval of.
- 98-23-SA—Enco Type 700 Steam Atomizing Burner, approval of.
- 52-23-SA—Automatic Gas Cut-Off, approval of (Brooklyn Co.).
- 60-23-SA—Crescent Combustion Fuel Oil Burner, approval of.
- 46-23-SA—Frankfort Type "P" Low Pressure Oil Burner, approval of.
- 50-23-SA—Marsh Fuel Oil Burner and Pump, approval of.
- 46-23-SA—Pennsylvania Globe Oil Burner, approval of.
- 69-23-SA—Warren Fuel Oil Pumps & Heater Sets, approval of.
- 76-23-SA—Ziegler Oil Burner, approval of.
- 180-23-SA—Viking Pump, approval of.
- 246-23-SA—Ludlow Gas Cut-Off Valve, approval of.
- 339-23-SA—National Light Service Oil Pump, approval of.
- 346-23-SA—Heatiator Oil Burner, approval of.
- 358-23-SA—Worthington Oil Burner, approval of.
- 361-23-SA—Todd Residence Fuel Oil Burner, approval of.
- 364-23-SA—Staples & Pfeiffer Oil Burner, approval of.
- 415-23-SA—Enco Mechanical Atomizing Fuel Oil Burner, approval of.
- 429-23-SA—Kerrihard Oil Burner, approval of.
- 444-23-SA—Tate-Jones No. 6 Oil Burner, approval of.
- 484-23-SA—Universal G. P. O. Burner, approval of.
- 493-23-SA—Newport Rotary Oil Burner, approval of.
- 538-23-SA—Lillibridge Oil Vapor Burner, approval of.
- 550-23-SA—Apex Gas Cut-Off Valve, approval of.

- 1296-24-SA—Chalmers Oil Burner, approval of.
- 1337-24-SA—Sure Heat Gravity Oil Burner, approval of.
- 1359-24-SA—Oliver Oil Gas Burner No. 30-A, approval of.
- 1372-24-SA—Adga High Pressure Burner, approval of.
- 1395-24-SA—Deming Power Rotary Force Pump, approval of.
- 1500-24-SA—Smolensky Check Valve, approval of.
- 1509-24-SA—USEM Closed Circuit Standpipe Tank and Sprinkler Supervision System, approval of.
- 19-25-SA—Winslow Industrial Burner and Pump Unit, approval of.
- 26-25-SA—Keenan Brilliant Burner, approval of.
- 154-25-SA—Edwards Solenoid Type Bell, approval of.
- 228-25-SA—Silent Glow Oil Burner, approval of.
- 242-25-SA—Derby Closed Circuit Automatic Sprinkler and Standpipe Supervisory Alarm Panel, approval of.
- 259-25-SA—Electrol Automatic Oil Burner.

Cases listed in the Reserve Calendar are cases upon which action by the board has been deferred pending committee reports, of this board, court or department actions, and will remain thereon until the aforesaid reports, court or departmental actions are consummated. Whereupon the case or cases will be restored to the regular calendar and due notice of the date set for hearing will be mailed to the appellant, applicant or petitioner of record.

FORMS FOR NOTICES TO PROPERTY OWNERS

If applicants, under the building zone resolution, desire copies of Form 13A, for notices to property owners, such forms are not to be supplied by this office.
The applicant is entitled only to one copy of Form 13A, properly filled out.

If he desires additional copies for his own convenience in notifying property owners, he can obtain such copies from The O'Connell Press, 176 Park Row, Manhattan, at three cents each, postage to be added if the forms are to be supplied by mail.

RULES

(Continued from page 759)

by the columns immediately above and below the floor line under consideration in direct proportion to the values of their ratios of I/h .

E. Wall Columns shall be designed to resist bending in the same manner as interior columns, except that W shall be substituted for W_1 in the formula for the moment. The moment so computed may be reduced by the counter moment of the weight of the structure which projects beyond the center line of the wall columns.

F. Roof Columns shall be designed to resist the total moment resulting from unequally loaded panels, as expressed by the formulae in paragraphs (D) and (E) of this rule.

Rule 13. Walls and Openings. In the design and construction of reinforced concrete flat slabs, additional

slab thickness, girders or beams shall be provided to carry any walls or concentrated loads in addition to the specified uniform live and dead loads. Such girders or beams shall be assumed to carry twenty (20) per cent of the total live and dead panel load in addition to the wall load. Beams shall also be provided in case openings in the floor reduce the working strength of the slab below the prescribed carrying capacity.

Rule 14. Special Panels. For structures having a width of less than three (3) rows of slabs, or in which exterior drops, capitals or columns are omitted, or in which irregular or special panels are used, and for which the rules relating to the design of reinforced flat slabs do not directly apply, the computations in the analysis of the design of such panels, shall, when so required, be filed with the superintendent of buildings.

Progress Report.

NOTICE

THE BOARD OF STANDARDS AND APPEALS AND THE BOARD OF APPEALS WILL RECONVENE JULY 14, 1925, FOR CONSIDERATION OF ALL MATTERS PENDING AS OF JUNE 18, 1925.

HOURS FOR CONSULTATION.

10 A. M. to 1 P. M.

Any person desiring to consult the chairman or the engineers, pertaining to the work of either board, will be seen only between the hours of ten in the morning and one in the afternoon—Saturdays excepted.

CALL OF CLERK'S CALENDAR.

The Clerk's Calendar consists of applications under the Building Zone Resolution, and its object is to give interested property owners opportunity to file objections, if any, and will be called in Room 1013, Tuesday, July 14, 1925, at 2 o'clock. At this call each case is set for hearing on a definite day.

The next subsequent Call of the Calendar will be on Tuesday, July 21, 1925, at 2 o'clock.

The Clerk's Calendar is not to be confused with the calendar of cases that have been definitely set for hearing on fixed days.

NOTICE TO APPELLANTS AND PETITIONERS.

No appeal, application or petition will be entertained in connection with which court proceedings are pending or in progress, nor accepted that are not filed within twenty days from the date of the action of the Administrative Official.

Any communication purporting to be an appeal, application or petition shall be regarded as a mere notice of intention to seek relief until it is filed on the form required by the rules of this board.

Upon receipt of any such communication the writer will be supplied with the official forms for presenting his appeal, application or petition, and if he fails to supply the data required thereon, within twenty days, his case may be dismissed for lack of prosecution.

At the time of filing an application, the appellant or petitioner shall forward a signed notice of appeal addressed to the administrative official (either superintendent of buildings or fire commissioner) and file with this board a duplicate of said notice.

Petitioners are advised that their plans must indicate the points of the compass so as to establish the true location and position of the property, the subject of the appeal.

Appeals, applications and petitions will be simplified and expedited by conforming to these directions.

WILLIAM E. WALSH, Chairman.

NO. 379-25-BZ—Application, April 27, 1925, under the building zone resolution, of Walter Scheminger, applicant and owner, to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles and also a motor vehicle repair shop; premises 350-354 Broadway, southwest corner of Cary avenue, West New Brighton, Staten Island, Richmond.

CAL. NO. 335-25-BZ—Application, March 27, 1925, under the building zone resolution, of Alfred J. Boulton, applicant, on behalf of The Stuyvesant Real Estate Co., Inc., owner, to permit in a business district extending from an unrestricted district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles; premises 89-99 Granite street, Brooklyn.

CAL. NO. 338-25-BZ—Application, March 28, 1925, under the building zone resolution, of Euell & Euell, architects, on behalf of Bernardo Affinito, owner, to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles; premises 1295 Cromwell avenue, northwest corner of West 169th street, The Bronx.

CAL. NO. 1057-24-BZ—Application, August 20, 1924, under the building zone resolution, of James J. Walker, applicant, on behalf of William A. Cameron, owner, to permit partly in a residence district and partly in a business district the erection of a garage for the storage of more than five (5) motor vehicles, and also within a "B" area district, the omission of the rear yard required by the zone resolution; premises northwest corner 182nd street and Folin street, The Bronx.

CAL. NO. 458-25-BZ—Application, April 29, 1925, under the building zone resolution, of William F. Doyle, applicant, on behalf of William Kolle, owner, to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles; premises 193-210 16th street, Brooklyn.

CAL. NO. 545-24-BZ—Application, May 12, 1925, under the building zone resolution, of Henry I. Perlin, applicant, on behalf of Bertha Freitag, owner, previously dismissed for lack of prosecution, to permit in a residence district the maintenance of a garage for the storage of five (5)

pleasure motor vehicles, four (4) space rented to persons not residing on premises; premises 380 Etna street, Brooklyn.

CAL. NO. 1425-24-BZ—Application, December 3, 1924, under the building zone resolution, of William F. Doyle, applicant, for Mrs. Theresa Browning, owner, Charles Milgrim, see, to permit in a residence district the maintenance of a factory use of an existing building; premises 231 West 7th street, Manhattan.

CAL. NO. 289-25-BZ—Application, March 13, 1925, under the building zone resolution, of William F. Doyle, applicant, on behalf of M. Zaubler, owner, to permit partly in a business district and partly in a residence district the erection and maintenance of an extension to an existing garage for the storage of more than five (5) motor vehicles; premises 553-555 11th street, Brooklyn.

CAL. NO. 1091-24-BZ—Application, September 2, 1924, under the building zone resolution, of John W. Clancy, applicant, on behalf of Valbalia Corporation, owner, to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles; premises 341 East 184th street, northwest corner of Marion avenue, The Bronx.

CAL. NO. 291-25-BZ—Application, March 16, 1925, under the building zone resolution, of Hollywood Garage Corp., applicant and owner, to permit in a business district the alteration and enlargement of a garage for the storage of more than five (5) motor vehicles; premises 238-244 East 64th street and 1207-1209 Second avenue, Manhattan.

CAL. NO. 400-25-BZ—Application, April 13, 1925, under the building zone resolution, of James Kearney, applicant, on behalf of Barnum Simowitch and Abe Frank, owners, to permit the alteration and also the conversion of occupancy of a building used as a storage warehouse to a garage for the storage of more than five (5) motor vehicles; premises 247-249 West 69th street, Manhattan.

CAL. NO. 1429-24-BZ—Application, December 3, 1924, under the building zone resolution, of John De Hart, architect, on behalf of John J. Daly and Max L. Fried, owners, to permit in a business district the maintenance of a motor vehicle repair shop; premises 1012-1018 Avenue St. John, The Bronx.

BOARD OF STANDARDS AND APPEALS.

SPECIAL MEETING.

Friday, September 25, 1925, at 2 p. m.

Rule.

77-25-SR—Proposed Amendments to Sprinkler Rules, adoption of.

RULES

COMMUNITY LAUNDRIES IN BUSINESS DISTRICTS

Amended Resolution Adopted by the Board of Appeals, March 16, 1920, Under Cal. No. 549-17-BZ.

WHEREAS, the board of appeals, at its regular meeting, December 16, 1919, unanimously rescinded an opinion incidentally expressed and incorporated in a resolution adopted by the board on May 28, 1917, in acting on Cal. No. 549-17-BZ. This opinion was that a laundry is not a prohibited use in a business district under the building zone resolution. The board unanimously rescinded this expression of opinion, inasmuch as a laundry is a factory within the meaning of the labor law and must be so construed

under the building zone resolution in the absence of any definition therein to the contrary.

Resolved, that this shall not be construed to include within the prohibited uses specified under Section 4 of the building zone resolution a community or neighborhood laundry located in the basement or ground floor of a building within a business district and containing not more than eight (8) rotary washing machines with inside cylinders not more than 30 in. in diameter by 30 in. in length over all nor more than two 20 in. extractors, the 20 in. measurement being the diameter of the inside basket, which machines and extractors shall be operated solely by electric power and do not require the installation of steam boiler or plant.

MINUTES

BOARD OF APPEALS

*CORRECTION.

The minutes of the meeting of the board of appeals, held Tuesday afternoon, May 12, 1925, as they appeared in Bulletin No. 20 Vol. X, are hereby corrected to read as follows:

THE RESOLUTION:

(1374-24-A)

WHEREAS, Croker National Fire Prevention Engineering Company, for 305 Broadway Corporation, owner, filed, November 20, 1924, an appeal, with the board of appeals, from an order of the fire commissioner, affecting premises 305-9 Broadway, Manhattan; and

WHEREAS, the order of the fire commissioner, dated November 20, 1924, reads.

"Order No. 58004-F:

"1. Provide iron or kalameined shutters at all openings in the exterior wall above 1st story which are distant in a direct line less than 30 ft. from any opening in any other building and not in the same plane with said openings and which are not more than 50 ft. above a neighboring roof at north and west sides of building or other approved protection as per Section 375, Article 18, Chapter 5, of the Code of Ordinances.";

and

**Correction—Words "throughout building" omitted in line 44 and words "constituting an exposure within the order" substituted.*

WHEREAS, the building is fireproof, 14 stories in height 74 ft. 6 in. by 124 ft. in area; OCCUPIED as an office building, 40 persons per story; equipped with a standpipe system; and

WHEREAS, there are four or five windows per story in the westerly wall on the 6th to 10th stories, inclusive, within 50 ft. of a neighboring building to the west; two windows in the northerly wall, west, on the 2nd to 6th stories, inclusive, within 50 ft. of the roof of a neighboring one-story extension to the north and seven windows in the northerly court, and also four windows in the northerly wall adjacent to this court within 30 ft. from openings in or within 50 ft. of the roof of neighboring buildings to the north; and

WHEREAS, this appeal was denied by the board at its meeting held on March 3, 1925, and reopened by vote of the board on April 14, 1923; and

WHEREAS, appellant contends that all of the openings, constituting exposures in the adjoining buildings, are equipped with fire shutters and that the building under question is occupied solely as an office building, and proposes to provide iron shutters at any openings in the stair or elevator shaft within 30 ft. from openings or within 50 ft. of the roof of neighboring building.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted on condition* that all exterior windows on course of elevator shafts and stairhalls constituting an exposure within the order shall be equipped with fireproof frames and sash, glazed with wire glass; and *granted* only so long as premises throughout shall be maintained and restricted to executive office use and occupancy.

RULES

FIRE RETARDING RULES

Adopted by the Board of Standards and Appeals August 30, 1917; Amended November 1, 1917.

Rule 1. Fire Retarding Materials for Garages, Motor Vehicle Repair Shops and Oil Selling Stations. In garages, motor vehicle repair shops and oil selling stations any material or form of construction shall be deemed fire-retarding within the meaning of §73, subdivision 3, of the building code, that resists the action of flame and heat when subjected to a continuous fire for one hour at an average temperature of seventeen hundred (1700) degrees Fahrenheit without the passage of flame, and with a maximum temperature rise to four hundred (400) degrees Fahrenheit on the side away from the fire. The point at which the temperature of transmitted heat is measured shall be protected from external air and weather conditions.

When the test specimen is in the form of partition construction, the area under test shall be not less than one hundred (100) square feet and the least dimension shall be not less than nine (9) feet. When in the form of floor construction, the area under test shall be not less than two hundred (200) square feet and the least dimension shall be not less than fourteen (14) feet.

During the fire, the floor construction shall support the live load for which it is designed, and after the fire shall safely sustain twice the designed live load with a maximum deflection of not more than one two-hundredth (1/200) part of the span.

Rule 2. Wood Joisted Floor Construction. Wood joisted floor construction shall be accepted as fire-retarding construction in non-fireproof buildings used as garages, motor vehicle repair shops or oil selling stations when the beams are protected on the upper and

under sides with the fire-retarding materials specified in rules for floor and ceiling coverings.

Rule 3. Floor Covering. Any one of the following forms of construction shall be accepted as fire-retarding for the covering of the upper sides of wood floor beams in joisted floor construction in non-fireproof buildings used as garages, motor vehicle repair shops or oil selling stations:

(a) Seven-eighths ($\frac{7}{8}$) inch wood underflooring protected with a membrane of two-ply waterproofing covered with not less than two and one-half ($2\frac{1}{2}$) inches of 1:2½:5 concrete or better, reinforced with not less than one-fourth ($\frac{1}{4}$) of one (1) per cent of steel mesh.

(b) Two and one half ($2\frac{1}{2}$) inches of 1:2:4 concrete applied directly to the top of the joists, with or without temporary support, reinforced with not less than one-fourth of one per cent steel rods, mesh or steel lath, and having the tops of the joists coated with approved waterproof paint or protected by tar paper on the top and on the sides for a distance of three inches from the top. (Amendment, Nov. 1, 1917.)

Rule 4. Ceiling Covering. Any one of the following forms of construction shall be accepted as fire-retarding for the covering of the undersides of wood floor beams in joisted floor construction in non-fireproof buildings used as garages, motor vehicle repair shops or oil selling stations:

(a) One-half ($\frac{1}{2}$) inch plaster boards with pointed joints covered with No. 26 U. S. gauge sheet metal with one (1) inch lapped seams nailed to the wood beams when spaced not more than sixteen

RULES

(16) inches on centers, or nailed to furring strips when the floor beams are spaced more than sixteen (16) inches on centers;

(b) Two thicknesses of one-quarter ($\frac{1}{4}$) inch asbestos board laid with tight staggered joints and nailed to the beams, when spaced not more than sixteen (16) inches on centers, or nailed to furring strips when the floor beams are more than sixteen (16) inches on centers;

(c) Metal lath weighing not less than three pounds per square yard, attached to furring strips and plastered with Portland cement mortar at least three-quarters ($\frac{3}{4}$) inch thick.

Rule 5. Attachment to Ceiling. Fire-retarding ceilings in non-fireproof buildings used as garages, motor vehicle repair shops or oil selling stations shall be attached to wood floor beams and girders in such manner as to maintain an air space between the wood beams, and all wood beams shall be seasoned before applying the protective coat.

Rule 6. Openings in Fire-Retarding Floors. Pipes or conduits which pass through floors shall be fitted with metal thimbles and made watertight for a height of three (3) inches above the floor.

Rule 7. Columns. All structural posts and columns in non-fireproof buildings required to be fire-retarded shall be protected with the fire-retarding materials specified for ceiling coverings in these rules, or with any of the materials accepted in fireproof construction; except that an air space shall not be required around steel or cast iron columns.

Where necessary for protection against mechanical injury, the fire-retarding protection on columns shall be jacketed to a height of five (5) feet from the ground with No. 4 U. S. gauge metal.

Rule 8. Girders. All girders in non-fireproof buildings required to be fire-retarded shall be protected with the fire-retarding materials specified for ceiling coverings in these rules, or with any of the materials acceptable in fireproof construction; except that an air space need not be provided around steel girders.

Rule 9. Shaft Enclosures. Existing stairways and vertical shafts in non-fireproof business buildings hereafter converted to be used as garages, motor vehicle repair shops or oil selling stations shall be enclosed in fire-retarding partitions continued through the non-fireproof floor construction, and when unfilled wood stud partitions are used, the space between the floor beams shall be fire-stopped with incombustible materials. All openings in such partitions shall be protected with accepted metal-covered fire doors or windows. Wherever necessary for protection against mechanical injury, the partition shall be jacketed to a height of five (5) feet on the garage side with No. 4 U. S. gauge metal. Any one of the following forms of partitions shall be accepted for the enclosure:

(a) Two by four inch wood studs, spaced not more than sixteen (16) inches on centers, covered both sides with metal lath weighing not less than three pounds per square yard, attached to furring strips and plastered with Portland cement mortar at least three-quarters ($\frac{3}{4}$) of an inch thick;

(b) Two by four inch wood studs spaced not more than sixteen (16) inches on centers, covered both sides with seven-eighths ($\frac{7}{8}$) inch wood sheathing, one-half ($\frac{1}{2}$) inch plaster boards with pointed joints and No. 26 U. S. gauge sheet metal with one-inch lapped seams;

(c) Two by four inch wood studs spaced not more than sixteen (16) inches on centers, covered both sides with seven-eighths ($\frac{7}{8}$) inch wood sheathing, two thicknesses of one-quarter ($\frac{1}{4}$) inch asbestos boards laid with tight staggered joints and jacketed with No. 16 U. S. gauge metal on the garage side to a height of five (5) feet;

(d) Two by four inch wood studs spaced not more than sixteen (16) inches on centers, filled in solidly between the studs with four inches of approved fireproof materials and covered on both sides with No. 26 U. S. gauge metal;

(e) Existing wood stud, lath and plaster partitions covered on the garage side with No. 26 U. S. gauge sheet metal with one-inch lapped seams.

NOTICE

Notice is hereby given to all petitioners, appellants and applicants for relief at the hands of the Board of Standards and Appeals and of the Board of Appeals, and to all lawyers, architects and engineers representing owners or lessees in proceedings before these boards—

First, That if they do not appear in person or by representative at the hearing on their case, dismissal for lack of prosecution is likely to result.

Second, That due and ample notice of the date set for hearing is provided in the publication in this BULLETIN of the calendars of these boards, each case being set down by Calendar Number and premises under the date of the hearing.

Third, That no plea of ignorance of the date of the hearing can be entertained in view of this publication and

of the posting of the calendars on the bulletin board in the offices of the board and of the further publication of the calendars in the daily press.

Fourth, That no one is entitled to written notice of the date for the hearing in his case, and that the plea of failure to receive such notice is no excuse for neglect to appear.

Fifth, That the business of these boards is to dispose of all cases promptly, for the reason that the pendency of an appeal or petition ties the hands of the administrative official in enforcing his order; therefore, no appeal or petition will be allowed to be hung up by reason of failure of the appellant or petitioner to file necessary data, or by any other method of delay.

RULES

COVERING THE DESIGN OF REINFORCED CONCRETE FLAT SLABS.

Adopted by the Board of Standards and Appeals, July 8, 1920, under Cal. 395-20-S.

Rule 1. Application. The rules governing the design of reinforced concrete flat slabs shall apply to such floors and roofs, consisting of three or more rows of slabs, without beams or girders, supported on columns, the construction being continuous over the columns and forming with them a monolithic structure.

Rule 2. Compliance with Building Code. In the design of reinforced concrete flat slabs, the provisions of article 16 of the building code shall govern with respect to such matters as are specified therein.

Rule 3. Assumptions. In calculations for the strength of reinforced concrete flat slabs, the following assumptions shall be made:

- (a) A plane section before bending remains plane after bending;
- (b) The modulus of elasticity of concrete in compression within the allowable working stresses is constant;
- (c) The adhesion between concrete and reinforcement is perfect;
- (d) The tensile strength of concrete is nil;
- (e) Initial stress in the reinforcement due to contraction or expansion in the concrete is negligible.

Rule 4. Stresses. (a) The allowable unit shear in reinforced concrete flat slabs on the bd section around the perimeter of the column capital shall not exceed one hundred twenty (120) pounds per square inch; and the allowable unit shearing stress on the bjd section around the perimeter of the drop shall not exceed sixty (60) pounds per square inch, provided that the reinforcement is so arranged or anchored that the stress may be fully developed for both positive and negative moments.

(b) The extreme fibre stress to be used in concrete in compression at the column head section shall not exceed seven hundred fifty (750) pounds per square inch.

Rule 5. Columns. For columns supporting reinforced concrete flat slabs, the least dimension of any column shall be not less than one-fifteenth ($1/15$) of the average span of any slabs supported by the columns; but in no case shall such least dimension of any interior column supporting a floor or roof be less than sixteen (16) inches when round nor fourteen (14) inches when square; nor shall the least dimension of any exterior column be less than fourteen (14) inches.

Rule 6. Column Capital. Every reinforced concrete column supporting a flat slab shall be provided with a capital whose diameter is not less than 0.225 of the average span of any slabs supported by it. Such diameter shall be measured where the vertical thickness of the capital is at least one and one-half ($1\frac{1}{2}$) inches, and shall be the diameter of the inscribed circle in that horizontal plane. The slope of the capital considered effective below the point where its diameter is measured shall nowhere make an angle with the vertical of more than forty-five (45) degrees. In case a cap of less dimensions than hereinafter described as a drop, is placed above the column capital, the part of this cap enclosed within the lines of the column capital extended upward to the bottom of the slab or drop at the slope of forty-five (45) degrees may be considered as part of the column capital in determining the diameter for design purposes.

Rule 7. Drop. When a reinforced concrete flat slab is thicker in that portion adjacent to or surrounding the

column, the thickened portion shall be known as a drop. The width of such drop when used, shall be determined by the shearing stress in the slab around the perimeter of the drop, but in no case shall the width be less than 0.33 of the average span of any slabs of which it forms a part. In computing the thickness of drop required by the negative moment on the column head section, the width of the drop only shall be considered as effective in resisting the compressive stress, but in no case shall the thickness of such drops be less than 0.33 of the thickness of the slab. Where drops are used over interior columns, corresponding drops shall be employed over exterior columns and shall extend to the one-sixth ($1/6$) point of the panel from the center of the column.

Rule 8. Slab Thickness. The thickness of a reinforced concrete flat slab shall be not less than that derived by the formulae $t = 0.024 L \sqrt{w} + 1\frac{1}{2}$ for slabs without drops, and $t = 0.02 L \sqrt{w} + 1$ for slabs with drops, in which t is the thickness of the slab in inches, L is the average span of the slab in feet, and w is the total live and dead load in pounds per square foot; but in no case shall this thickness be less than one-thirty-second ($1/32$) of the average span of the slab for floors, nor less than one-fortieth ($1/40$) of the average span of the slab for roofs, nor less than six (6) inches for floors nor less than five (5) inches for roofs.

Rule 9. Reinforcement. (a) In the calculation of moments at any section, all the reinforcing bars which cross that section may be used, provided that such bars extend far enough on each side of such section to develop the full amount of the stress at that section. The effective area of the reinforcement at any moment section shall be the sectional area of the bars crossing such section multiplied by the sine of the angle of such bars with the plane of the section. The distribution of the reinforcement of the several bands shall be arranged to fully provide for the intermediate moments at any section.

(b) Splices in bars may be made wherever convenient but are preferably at points of minimum stress. The length of any splice shall be not less than eighty (80) bar diameters and in no case less than two (2) feet. The splicing of adjacent bars shall be avoided as far as possible. Slab bars which are lapped over the column, the sectional area of both being included in the calculation for negative moment, shall extend to the lines of inflection beyond the column center.

(c) When the reinforcement is arranged in bands, at least fifty (50) per cent of the bars in any band shall be of a length not less than the distance center to center of columns measured rectangularly and diagonally; on bars used as positive reinforcement shall be of a length less than half ($1/2$) the panel length plus forty (40) bar diameters for cross bands, or less than seven-tenths ($7/10$) of the panel length plus forty (40) bar diameters for diagonal bands and no bars used as negative reinforcement shall be of a length less than half ($1/2$) the panel length. All reinforcement framing perpendicular to the wall in exterior panels shall extend to the outer edge of the panel and shall be hooked or otherwise anchored.

(d) Adequate means shall be provided for properly maintaining all slab reinforcement in the position assumed by the computations.

Rule 10. Line of Inflection. In the design of reinforced concrete flat slab construction, for the purpose of making calculations of the bending moments at sections other than defined in these rules, the line of inflection

RULES

shall be considered as being located one-quarter ($\frac{1}{4}$) the distance, center to center, of columns, rectangularly and diagonally, from center of columns for panels without drops, and three-tenths ($\frac{3}{10}$) of such distance for panels with drops.

Rule 11. Moment Sections. For the purpose of design of reinforced concrete flat slabs, that portion of the section across a panel, along a line midway between columns, which lies within the middle two quarters of the width of the panel shall be known as the inner section, and those portions of the section in the two outer quarters of the width of the panel shall be known as the outer sections. Of the section which follows a panel edge from column to column and which includes the quarter perimeters of the edges of the column capitals, that portion within the middle two quarters of the panel width shall be known as the mid section and the two remaining portions, each having a projected width equal to one-quarter of the panel width, shall be known as the column head sections.

Rule 12. Bending Moments. In the design of reinforced concrete flat slabs the following provisions with respect to bending moments shall be observed. In the moment expressions used:

W is the total dead and live load on the panel under consideration, including the weight of drop whether a square, rectangle or parallelogram;

W_1 is the total live load on the panel under consideration;

L is the length of side of a square panel center to center of columns; or the average span of a rectangular panel which is the mean length of the two sides;

n is the ratio of the greater to the less dimension of the panel;

h is the unsupported length of a column in inches, measured from top of slab to base of capital;

I is the moment of inertia of the reinforced concrete column section.

A. Interior Square Panels. The numerical sum of the positive and negative moments shall be not less than $1/17 W L$. A variation of plus or minus five (5) per cent shall be permitted in the expression for the moment on any section, but in no case shall the sum of the negative moments be less than sixty-six (66) per cent of the total moment, nor the sum of the positive moments be less than thirty-four (34) per cent of the total moment for slabs with drops; nor shall the sum of the negative moments be less than sixty (60) per cent of the total moment, nor the sum of the positive moments be less than forty (40) per cent of the total moment, for slabs without drops.

1. In *two-way systems*, for slabs with drops, the negative moment resisted on two column head sections shall be $-1/32 W L$; the negative moment on the mid section shall be $-1/133 W L$; the positive moment on the two outer sections shall be $+1/80 W L$ and the positive moment on the inner section shall be $+1/133 W L$; and for slabs without drops, the negative moment resisted on two column head sections shall be $-1/36 W L$, the negative moment on the mid section shall be $-1/133 W L$, the positive moment on the two outer sections shall be $+1/63 W L$ and the positive moment on the inner section shall be $+1/133 W L$.

2. In *four-way systems*, the negative moments shall be as specified for Two-Way Systems; the positive moment on the two outer sections shall be $+1/100 W L$ and the positive moment on the inner section shall be $+1/100 W L$ for slabs with drops; and the positive moment on the two outer sections shall be $+1/174 W L$, and the positive moment on the inner section shall be $+1/100 W L$, for slabs without drops.

3. In *three-way systems*, the negative moment on the column head and mid sections and the positive moment on the two outer sections, shall be as specified for Four-Way Systems. In the expression for the bending moments on the various sections, the length L shall be assumed as the distance center to center of columns and the load W as the load on the parallelogram panel.

B. Interior Rectangular Panels.

1. When the ratio n does not exceed 1.1, all computations shall be based on a square panel of a length equal to the average span, and the reinforcement shall be equally distributed in the short and long directions according to the bending moment coefficients specified for interior square panels.

2. When the ratio n lies between 1.1 and 1.33, the bending moment coefficients specified for interior square panels shall be applied in the following manner:

(a) In *two-way systems*, the negative moments on the two column head sections and the mid section and the positive moment on the two outer sections and the inner section at right angles to the long direction shall be determined as for a square panel of a length equal to the greater dimension of the rectangular panel; and the corresponding moments on the sections at right angles to the short direction shall be determined as for a square panel of a length equal to the lesser dimension of the rectangular panel. In no case shall the amount of reinforcement in the short direction be less than two-thirds ($2/3$) of that in the long direction. The load W shall be taken as the load on the rectangular panel under consideration.

(b) In *four-way systems*, for the rectangular bands, the negative moment on the column head sections and the positive moment on the outer sections shall be determined in the same manner as indicated for *two-way systems*.

For the diagonal bands the negative moments on the column head and mid sections and the positive moment on the inner section shall be determined as for a square panel of a length equal to the average span of the rectangle. The load W shall be taken as the load on the rectangular panel under consideration.

(c) In *three-way systems*, the negative and positive moments on the bands running parallel to the long direction shall be determined as for a square whose side is equal to the greater dimension; and the moments on the bands running parallel to the short direction shall be determined as for a square whose side is equal to the lesser dimension. The load W shall be taken as the load on the parallelogram panel under consideration.

C. Exterior Panels. The negative moments at the first interior row of columns and the positive moments at the center of the exterior panels on moment sections parallel to the wall, shall be increased twenty (20) per cent over those specified above for interior panels. The negative moment on moment sections at the wall and parallel thereto shall be determined by the conditions of restraint, but the negative moment on the mid section shall never be considered less than fifty (50) per cent and the negative moment on the column head section never less than eighty (80) per cent of the corresponding moments at the first interior row of columns.

D. Interior Columns shall be designed for the bending moments developed by unequally loaded panels, eccentric loading or uneven spacing of columns. The bending moment resulting from unequally loaded panels shall be considered as $1/40 W_1 L$, and shall be resisted

(Continued on page 810)

PUBLIC HEARING

PROPOSED AMENDMENTS TO RULES GOVERNING FIRE EXTINGUISHING APPLIANCES— SPRINKLER SYSTEMS.

[77-25-SR]

NOTICE IS HEREBY GIVEN that a public hearing will be held by the Board of Standards and Appeals on Friday, September 25, at 2 p. m., Room 1013, Municipal Building, on proposed amendments to Rules for Fire Extinguishing Appliances, Sprinkler Rules.

General Requirements. The rules contained herein cover the general details of a sprinkler equipment only. Before an equipment is installed or before a present equipment is remodeled, complete working plans should be submitted for approval to Fire Department.

These plans shall be drawn to an indicated scale; give correct address and points of compass; show sectional elevations of the building; and the essential features of the construction, viz., size, location and direction of joists, timbers or other structural members. They shall also indicate the location and size of water supplies, connecting pipes, feed mains and risers, gate, check, alarm and dry-pipe valves, as well as the location, spacing, number and type of sprinklers.

Upon approval of preliminary plans such number of sets of clean, corrected plans on cloth as the Fire Commissioner may require, not exceeding three (3), shall be filed for final approval of the Fire Commissioner. A certified copy of the approved plans shall be forwarded to the Bureau of Buildings by the Bureau of Fire Prevention. Such application and specification forms as may be prescribed by the Fire Commissioner shall accompany preliminary plans. If a standpipe (fire line) equipment is provided throughout the building, the plans shall include a note to that effect.

When entirely completed in accordance with the approved plans and as per test herein provided for, application shall be made to the Bureau of Fire Prevention for inspection of the completed installation. When the sprinkler equipment is approved the applicant will be so advised in writing by the Bureau of Fire Prevention.

All sprinkler equipments shall be installed in a thoroughly workmanlike manner.

Rule 1. Definition of Automatic Extinguisher Systems. Automatic extinguisher systems shall consist of a system of piping connected to one or more acceptable sources of water supply, or other extinguishing medium, provided with distributing devices so arranged and located as to discharge and diffuse automatically under the action of heat an effective stream or spray over every part of the interior of the building area in which a fire may start or to which it may be communicated.

Rule 2. Classification of Sprinkler Systems. For the purpose of these rules, sprinkler systems shall be classified as:

(a) Automatic Wet Pipe Systems, in which all pipes and sprinkler heads are at all times filled with water;

(b) Automatic Dry Pipe Systems, in which the pipes and sprinkler heads are filled with air, either compressed or at atmospheric pressure, and the water supply is operated by a Dry Pipe Valve as defined in Rule 27 of these Rules.

(c) Non-Automatic Systems, in which all pipes and sprinkler heads are maintained dry with a fire department connection for water supply.

Thermostatic fire alarm with direct connection to Central Office or Fire Department Headquarters shall be provided in connection with all non-automatic sprinkler systems.

Rules 3. Approved Devices. Automatic Sprinklers and accessory appliances shall include all devices approved as such by the Bureau of Standards, Washington, D. C.; by the Underwriters' Laboratories, Inc., of Chicago; by the Associated Factory Mutual Laboratories of Boston; and all devices which meet the tests prescribed by the Board of Standards and Appeals.

Rule 4. Water Supply. Approved sources of water supply shall be classified as Automatic and Auxiliary.

(a) Automatic Sources shall include the Gravity Tank, the Pressure Tank, [and] the Public Water System, and the Automatic Electric Fire Pump, installed as required under the provisions of Rule 8, hereinafter provided for.

b) Auxiliary Sources shall include the non-automatic Fire Pump and the Fire Department Connection.

Rule 5. Gravity Tank. Gravity tanks shall contain an available quantity of water sufficient to supply twenty-five per cent (25%) of the number of sprinkler heads in the average protected fire area for twenty (20) minutes, but not less than 5,000 gallons; and the bottom of the tank shall have an elevation of not less than twenty (20) feet above the highest line of sprinklers below the main roof. When the area of a pent house exceeds 2,500 sq. ft. the bottom of the tank shall be required to be not less than 20 feet above the highest line of sprinklers below the pent house roof, but where a pent house contains only pressure tanks this rule will not apply.

Where a tank capacity in excess of [25,000] 30,000 gallons is required by this rule, the amount of water to be provided in excess of [25,000] 30,000 gallons shall be specified by the Board of Standards and Appeals, except when tanks of unlimited capacities are supported on structures altogether independent of buildings.

The tank shall be filled through a fixed pipe, independent of the sprinkler piping, not less than two (2) inches in size, discharging into the top of the tank, or through a by-pass not less than two (2) inches in size around the check valve in the discharge pipe, provided the supply is of sufficient pressure to fill the tank. The water supply and connections shall be capable of supplying the tank at a rate of not less than sixty-five (65) gallons per minute.

The filling pipe shall be carried up inside a frost-proof casing and may extend through tank bottom to discharge at top of tank above full water level. The portion of pipe inside tank must be of brass or copper or other non-corrosive material.

Tanks shall not be fed through sprinkler lines.

The sprinkler and standpipe tanks may be fed from a common source of supply, either a pump or a direct service main connection, provided that there are separate feed mains from the basement or lowest story and a control valve in each feed line in a pump or engine room.

The overflow pipe shall be not less than two (2) inches in diameter for tanks up to 30,000 gallons capacity and not less than three (3) inches in diameter for larger tanks. The top of the overflow pipe shall be three (3) inches below the top of the staves in wooden tanks and one (1) inch from the top in steel tanks. The pipe may extend through the bottom of tank provided the portion inside tank is of brass or copper or other non-corrosive metal and without joints or it may extend through side of tank. For tanks over roofs overflow pipes shall terminate not more than twenty-four (24) inches above roof and shall be fitted with a 90 degree elbow.

The discharge, heating or filling pipes where exposed to the weather shall be protected from freezing by a frost-proof covering which may be of three layers of one-inch (1") hair felt interspersed with building paper well wrapped and secured and covered with canvas well painted or by frost-proof boxing as specified by the National Board of Fire Underwriters.

Easy access to top of each tank shall be provided by means of a steel gooseneck ladder substantially constructed and rigidly braced, the top of which shall not tip outward from the vertical at any point.

Tanks above roofs shall be constructed according to the requirements of the Building Code and supporting struc-

PUBLIC HEARING

res shall be approved by the Superintendent of Buildings. Tanks not enclosed and exposed to the weather shall be covered with a double roof of acceptable construction consisting of a tight flat cover of matched boards and above this a conical roof which shall be covered with an approved roofing.

Where a gravity tank may supply both sprinklers and stand hydrants it shall not be of less than 30,000 gallons capacity and located on a structure altogether independent of buildings and the bottom shall not be less than 75 feet above the ground level, and not less than 20 feet above the highest line of sprinklers below the main roof of the highest building in a group of buildings.

Rule 6. Pressure Tank. Pressure tanks shall contain sufficient water to supply twelve and one-half per cent ($12\frac{1}{2}\%$) of the number of sprinklers in the average protected fire area for twenty (20) minutes, but not less than [5,000] 3,000 gallons of water for a wet pipe system where supplemented by an auxiliary water supply, and not less than 5,000 gallons of water for a dry-pipe system. No single tank shall have a capacity greater than 9,000 gallons. The tank shall be kept two-thirds ($2/3$) full of water under a pressure of seventy-five (75) pounds per square inch, and shall be so proportioned and located that a pressure of not less than fifteen (15) pounds per square inch will be available on the highest line of sprinklers below the main roof when all the water has been discharged from the tank.

[The tank shall be placed either on the roof or in the highest sprinklered story.]

A pressure tank or tanks shall not be located below the highest line of sprinklers supplied by tank or tanks.

Where [a tank] the total capacity of the pressure tank supply is in excess of [25,000] 30,000 gallons as required by this rule, the amount of water to be provided in excess of [25,000] 30,000 gallons shall be specified by the Board of Standards and Appeals.

The water shall be supplied through a fixed pipe, independent of the sprinkler piping, not less than [two] one and one-half ($1\frac{1}{2}$) inches in size [with a one and one-quarter ($1\frac{1}{4}$) inch connection to the tank], or through a by-pass not less than [two (2)] one and one-half ($1\frac{1}{2}$) inches in size around the check valve in the discharge pipe provided the supply is of sufficient pressure to fill the tank. The water supply and connections shall be capable of supplying the tank at a rate of not less than sixty-five (65) gallons per minute without reducing the pressure in the tank. The tank shall have a fixed metallic horizontal line on the end opposite the glass gauge, or other acceptable device, to indicate the level of the water when the tank is two-thirds full.

The air compressor shall be of sufficient capacity to increase the air pressure at the average rate of one (1) pound in two minutes in each pressure tank.

Rule 7. Public Water System. Direct connection to the city water supply shall be capable of furnishing water at not less than fifteen (15) pounds per square inch static pressure at the highest line of sprinklers under the main roof.

Subject to the requirements of the Department of Water Supply, Gas and Electricity, the size of each connection shall be as large as that of the main riser and not less than four (4) inches, and shall have a conveniently accessible control valve fixed to it at, or near, the curb, or, when possible, still further away from the building. The control valve shall be fitted with a frost and waterproof box, not less than four (4) feet nor more than six (6) feet below the curb, with a fixed stem extending to a compartment at the level of the sidewalk. The cover shall be bolted to the casing and shall be so marked as to be quickly located and to indicate the purpose of the valve. The valve shall be of indicating pattern, operated by a special socket wrench approved by the department of water supply, gas and electricity.

Where it is impractical to install a control valve box at the curb because of a vault under the sidewalk and within 18" thereof, the control valve may be located in the water supply connection at a point not more than two (2) feet from the point of entry into a vault.

Where a water meter is required in the water supply connection to an automatic sprinkler equipment, it shall be of a type which allows free flow of water and approved by the Department of Water Supply, Gas and Electricity, or a type of fire line meter which has been specifically approved by the Fire Commissioner for use in connection with fire extinguishing equipment.

Evidence establishing the fact that water supply conditions and pressures are as may be required shall be submitted to the Fire Department.

Rule 8. Fire Pump. An automatic electric fire pump as an automatic source of water supply is one approved for such use and controlled by an approved automatic controlling device, which shall be adjusted to maintain not less than 15 pounds water pressure at the highest sprinkler below main roof and in pent houses over 2,500 sq. ft., as provided in Rule 5. And shall receive water supply only from a direct connection to the city water main.

As auxiliary sources of water supply steam or electric standard fire pumps shall receive water supply from a suction tank, a direct connection to the city water main or other approved sources capable of supplying the pump at its rated capacity for sixty (60) minutes. The rated capacity of the pump shall be not less than five hundred (500) gallons per minute, and shall be sufficient to supply twenty-five per cent (25%) of the number of sprinklers in the average protected fire area.

The pump shall be located in a room of fireproof construction, properly ventilated, lighted and drained, enclosed in eight (8) inch brick or concrete walls with approved fire doors at openings and with fireproof floor and ceiling construction. If located in the lowest story of the building, the pump shall be placed on a foundation not less than one (1) foot in height. The pump room shall be readily accessible with safe egress for the attendant.

A reliable source of energy for driving the pump shall be provided. For steam pumps, provision shall be made for sufficient steam power to operate the pumps at full rated capacity, and a steam pressure of not less than fifty (50) pounds shall be maintained at the pump at all times. Where there is more than one boiler, the pipes and valves shall be so arranged to permit the cutting out of any one boiler without interrupting the steam supply to the pump from the other boilers. The boiler room shall be cut off from the remainder of the building by fireproof floor and wall construction with approved fire doors at all openings.

Electrical energy from a public service plant shall be acceptable as a source of energy for driving electric fire pumps. When local power plants supply the energy for operating electric pumps, two motor generator units shall be provided, or one generator unit supplemented by a public service break-down switch. Local electric power plants shall be located in rooms of fireproof construction with approved fire doors at openings.

Rule 9. Sprinkler Discharge. For the purpose of computing the capacity of water supplies, standard one-half ($\frac{1}{2}$) inch sprinkler heads shall be assumed to have an average discharge of twenty (20) gallons per minute, and the discharge of larger heads shall be computed proportionately in the ratio of the areas of their respective orifices.

Rule 10. Fire Area. A fire area is any floor space enclosed on all sides by exterior walls or fire walls or a combination of both. The number of sprinklers in the average protected fire area shall be determined by the number of sprinklered stories in such section. In

PUBLIC HEARING

determining the required capacity of water supplies, the number of sprinklers in the average protected fire area need not include those located in low positions, such as under benches, low shelves, closets and platforms and between cars in car barns.

Rule 11. Fire Department Connection. All automatic sprinkler systems shall be provided with at least one two-way Siamese connection on each street front of the building for connection to the fire department hose. Buildings fronting on only one street shall be provided with at least two Siamese connections when the street frontage of building exceeds [one hundred and fifty (150)] two hundred (200) feet [in width].

Where buildings have frontages on more than one street there shall be a fire department connection on each street front where frontage is not continuous but in all cases where more than one fire department connection is required they shall be located as the Fire Commissioner may direct and shall not be grouped.

All Siamese hose connections hereafter installed, except those on piers or warehouses intended for fire boat use, shall be three (3) inches in size. Fire boat connections shall be three and one-half (3½) inches in size. All hose connections shall be female, with standard fire department threads.

The inlets shall be placed at least eighteen (18) inches and not more than two (2) feet above the sidewalk, in a horizontal position accessible to the fire department, and shall be provided with a four (4) inch discharge connecting with a four (4) inch pipe to the sprinkler system for three (3) inch fire department connection and with a six (6) inch discharge outlet and six (6) inch pipe for three and one-half (3½) inch fire boat connection. Each inlet shall be provided with a clapper valve machined to a true face.

Each Siamese connection shall be designated by raised letters at least one (1) inch in size, cast in the fitting in a clear and prominent manner and reading for the service designated, viz.: "Base. Spkr.," etc., as the case may be. If the entire building is sprinklered, the fitting shall be marked "Auto. Spkr."

Siamese hose connections may project through a street wall not more than twelve (12) inches beyond the building line except that where there is an angle formed by the street wall and a check piece or the base of a column, pilaster or ornamental projection, they may be so located that no part extends more than fifteen (15) inches from either side of such angle in accordance with the provisions of the Building Code.

In each fire department connection there shall be an approved straightway check valve installed in a horizontal position, unless suitably designed for vertical position, and the piping shall be arranged to drain between the check valve and the outside siamese coupling by either a ball drip having a one-half (½) inch pipe connection and one-half (½) inch orifice and a bronze ball of proper size, or by a three-quarter (¾) inch drip connection, with plugged valve attached, and when necessary arranged to drain to a sewer. A drain connection may be tapped into the body of check valve only when located in a horizontal position.

Rule 12. Automatic Sprinkler Systems. Automatic sprinkler systems shall be classified as:

(a) One Source Systems, supplied with water from any one of the automatic sources; and

(b) Two Source Systems, supplied with water from a combination of any two of the automatic sources; two pressure tanks with a total water capacity twice that required for a one source supply; direct connection to the city water supply on two different streets, so located that the closing of the controlling valve on one main will not eliminate the main on the other street; or a direct connection to the city water supply and one of the auxiliary sources provided the water supply main is at least six (6) inches in size, the main is fed both

ways and a two (2) inch test pipe at the top of the sprinkler riser shows a flowing pressure of fifteen (15) pounds per square inch between the hours of six a. m. to six p. m.

A gravity tank and pressure tank, or a gravity tank or pressure tank and one of the automatic sources or two pressure tanks having a total water capacity for a one-source supply may be considered as a two-source supply where the occupancy of the building does not conflict with Rules 38, 39 and 40 hereinafter provided for.

Rule 13. Sprinkler Spacing. Sprinkler heads and lines shall be spaced as herein provided:

Mill Construction. Under mill ceiling (smooth solid plank and timber construction, 5 to 12 foot bays) one line of sprinklers shall be placed in the center of each bay and the distance between the heads on each line shall not exceed the following:

(a) For Standard one-half (½) inch heads—

- 8 feet in 12 foot bays;
- 9 feet in 11 foot bays;
- 10 feet in 10 foot bays;
- 11 feet in 9 foot bays;
- 12 feet in 5 to 8 foot bays;

(b) For Conran* one (1) inch heads—

- 20 feet in 5 to 12 foot bays.

(c) For Conran* one and one-quarter (1¼) inch heads—

- 25 feet in 5 to 12 foot bays.

(d) Vaults used for the storage of nitro-cellulose products and vaults used for the storage of inflammable motion picture films shall have one standard one-half (½) inch head for each 62½ cubic feet of available storage space, or one (1) inch Conran* head for each 250 cubic feet of available storage space.

Measurements shall be taken from center to center of timbers.

Ceilings of modified mill construction having bays less than three (3) feet wide shall be treated as open joist construction and sprinkler heads and lines spaced accordingly.

Bay timbers spaced three (3) feet or more on centers, but less than five (5) feet on centers, will require special ruling by the administrative official having jurisdiction.

Joisted Construction. Under open finish joisted construction ceilings, floor, decks and roofs, the sprinkler lines shall be run at right angles to the joists and the heads "Staggered spaced" so that heads on one line will be opposite a point half way between heads on adjacent lines.

(a) For Standard one-half (½) inch heads the distance between lines of sprinklers shall not exceed ten (10) feet, and the distance between heads on each line shall not exceed eight (8) feet, the end heads on alternate lines being spaced not more than two (2) feet from wall or partition. Permission may be given by the administrative official having jurisdiction to install but one line of sprinklers, in each bay where girders project below the under side of joists and divide the ceiling into bays ten (10) to eleven and one-half (11½) feet wide from center to center of girders, and the heads shall then be spaced on each line so that the area covered by a single head does not exceed eighty (80) square feet. In all cases where such bays are over eleven and one-half (11½) feet wide, two or more lines of sprinklers shall be installed in each bay as required by the rules for spacing.

*Wherever the term "Conran head" is used in these Rules, it is to be taken as meaning either a Conran head of the type tested and approved by the Fire Department, or one that has passed similar tests by the Fire Department.

PUBLIC HEARING

Where girders and joists are flush at the bottom, heads shall be spaced according to the general rule.

(b) For Conran* one (1) inch heads the distance between adjacent lines shall not exceed twenty (20) feet and the distance between the heads on each line shall not exceed sixteen (16) feet, the end heads on alternate lines being spaced not more than four (4) feet from wall or partition. Where girders project below the under side of joists and divide the ceiling into bays not exceeding twenty (20) feet in width, measured from center to center of girders, one line shall be placed in the center of each bay. In bays exceeding twenty (20) feet in width at least two (2) lines shall be installed in each bay and in no case shall the distance between adjacent lines exceed twenty (20) feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads the distance between adjacent lines shall not exceed twenty-five (25) feet and the distance between the head on each line shall not exceed twenty (20) feet, the end head on alternate lines being spaced not more than five (5) feet from wall or partition. Where girders project below the under side of joists and divide the ceiling into bays not exceeding twenty-five (25) feet in width, measured from center to center of girders, one line shall be placed in the center of each bay. In bays exceeding twenty-five (25) feet in width at least two (2) lines shall be installed in each bay, and in no case shall the distance between adjacent lines exceed twenty-five (25) feet.

Smooth Finish, Sheathed or Plastered Ceilings. Under smooth finish, sheathed or plastered ceilings, in bays six (6) feet wide and over (measurements to be taken from center to center of timber, girder or other projection or support forming the bay), sprinkler heads and lines shall be spaced as follows:

(a) For standard one-half ($\frac{1}{2}$) inch heads—

One line of sprinklers shall be placed in the center of each bay for bays not exceeding twelve (12) feet in width, and the distance between the heads on each line shall not exceed the following:

- 8 feet in 12 foot bays;
- 9 feet in 11 foot bays;
- 10 feet in 6 to 10 foot bays.

Bays in excess of twelve (12) feet in width and less than twenty-three (23) feet in width, shall contain at least two (2) lines of sprinklers; bays twenty-three (23) feet in width or over shall have the lines therein not over ten (10) feet apart. In bays in excess of twelve (12) feet in width, not more than one hundred (100) square feet of ceiling area shall be allotted to any single head.

(b) For Conran* one (1) inch heads—

One line of sprinklers shall be placed in the center of each bay for bays not exceeding twenty (20) feet in width, and the distance between the heads on each line shall not exceed twenty (20) feet. Bays in excess of twenty (20) feet in width shall contain at least two (2) lines and in no case shall the distance between adjacent lines exceed twenty (20) feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads—

One line of sprinklers shall be placed in the center of each bay for bays not exceeding twenty-five (25) feet in width and the distance between the heads on each line shall not exceed twenty-five (25) feet. Bays in excess of twenty-five (25) feet in width shall contain at least two (2) lines and in no case shall the distance between adjacent lines exceed twenty-five (25) feet.

Fireproof Construction. The rules of slow-burning mill construction shall apply as far as practicable. The rule may be modified, however, the intent being to arrange the spacing of heads to protect the contents rather than the ceilings; but in no case shall the distance between a head on one line and a head on an adjacent line exceed the following:

(a) For standard one-half ($\frac{1}{2}$) inch heads, 12 feet.

(b) For Conran one (1) inch heads, 20 feet.

(c) For Conran one and one-quarter ($1\frac{1}{4}$) inch heads, 25 feet.

Distance From Walls. The distance from wall or partition to the first head on a sprinkler line shall not exceed one-half the allowable distance between the heads on such line. Additional heads may be required in the narrow pockets formed by bay timbers or beams and wall. Where beams, girders, columns, walls, partitions or other obstructions prevent the effective discharge of water, additional heads shall be installed to effectively sprinkle the area.

Vertical Shafts. In vertical shafts having inflammable sides, heads shall be provided within the shaft in addition to the head or heads at the tops of shafts, as follows:

(a) One standard one-half ($\frac{1}{2}$) inch head for each 200 square feet of inflammable surface.

(b) One Conran* one (1) inch head for each 400 square feet of inflammable surface.

(c) One Conran* one and one-quarter ($1\frac{1}{4}$) inch head for each 500 square feet of inflammable surface.

Such head or heads shall be installed at each floor when practicable, and always when shaft is trapped. Where practicable, heads shall be "staggered" at the alternate floor levels, particularly when only one head is installed at each floor level.

Pitched Roofs. Under a pitched roof sloping more steeply than one (1) foot in three (3) feet, heads shall be located in peak of roof, and those on either side of the peak shall be spaced according to the foregoing requirements. The distance between heads shall be measured on a line parallel with the roof. Where the roof meets the side wall or the floor line, the heads shall be placed not more than the following distance from such intersection:

(a) For standard one-half ($\frac{1}{2}$) inch heads, $3\frac{1}{2}$ feet.

(b) For Conran* one (1) inch heads, 7 feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, $8\frac{1}{2}$ feet.

Heads spaced not to exceed the following distance each way from the peak of roof, measured on a line parallel with the roof, may be used in lieu of heads located in peak of roof:

(a) For standard one-half ($\frac{1}{2}$) inch heads, $2\frac{1}{2}$ feet.

(b) For Conran* one (1) inch heads, 5 feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, $6\frac{1}{4}$ feet

In sawtooth roof construction, the end heads on the branch line shall be spaced not to exceed the following distance from the peak of the sawtooth:

(a) For standard one-half ($\frac{1}{2}$) inch heads, $2\frac{1}{2}$ feet.

(b) For Conran* one (1) inch heads, 5 feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, $6\frac{1}{4}$ feet.

Special Locations and Variations. In special locations, such as over electric generating, power and transforming apparatus, over their controlling devices and switchboards, where water from the fire extinguishing equipment would be detrimental, the sprinkler lines and heads may be omitted at the discretion of the administrative official having jurisdiction, and when in his judgment a slight variation of this rule of spacing is desirable to effect a more efficient distribution of water for fire extinguishing purposes, the sprinkler lines and heads shall be spaced as he may direct.

Rule 14. Sprinkler Position. All sprinkler heads shall be located, wherever possible, in an upright position on top of the pipes, except that sprinkler heads on automatic wet pipe systems may be pendant on concealed piping and when construction or occupancy of a room or enclosure makes it preferable.

(a) Where standard one-half ($\frac{1}{2}$) inch heads are installed sprinkler deflectors shall be parallel to ceilings, roofs or the

PUBLIC HEARING

incline of stairs, but when installed in the peak of a pitched roof they shall be horizontal. Distance of deflectors from ceilings of mill or other smooth construction, or bottom of joists of open joist construction, shall be not less than three (3) inches nor more than ten (10) inches.

In fireproof buildings, the distance between deflectors and panel ceilings shall not exceed fifteen (15) inches.

Not less than eighteen (18) inches effective clear space shall be left below the sprinkler heads, so that they may discharge an unbroken spray blanket from sprinkler to sprinkler and sides of room when in operation. Any stock piles, racks or other obstructions interfering with such action shall not be permitted. *Sprinkler system piping shall not be used for the support of stock, clothing, etc.*

(b) Where Conran* heads are installed, the top of head shall be located the same distance below joists or ceiling as specified for deflectors in paragraph (a) of this rule; except that when heads are located under pitched roofs of piers or similar structures, they shall in general be installed in the upright position (not normal to slope of roof) and three (3) feet vertically below the underside of roof. When the administrative official having jurisdiction deems a variation of this rule advisable to obtain a more efficient distribution of water, the heads shall be located with respect to joists or ceiling, as he may direct.

Rule 15. Pipe Sizes. The number of heads on a given size pipe in one fire area in any story shall not exceed the following:

(a) For standard one-half ($\frac{1}{2}$) inch heads—

Size of Pipe	Maximum No. of Heads Allowed
$\frac{3}{4}$ inch	1 head
1 " "	2 heads
$1\frac{1}{4}$ " "	3 " "
$1\frac{1}{2}$ " "	5 " "
2 " "	10 " "
$2\frac{1}{2}$ " "	20 " "
3 " "	36 " "
$3\frac{1}{2}$ " "	55 " "
4 " "	80 " "
5 " "	140 " "
6 " "	200 " "
7 " "	300 " "
8 " "	420 " "

(b) For Conran* one (1) inch heads—

Size of Pipe	Maximum No. of Heads Allowed
1 inch	1 head
$1\frac{1}{4}$ " "	2 heads
$1\frac{1}{2}$ " "	3 " "
2 " "	4 " "
$2\frac{1}{2}$ " "	6 " "
3 " "	9 " "
4 " "	18 " "
5 " "	34 " "
6 " "	51 " "
7 " "	75 " "
8 " "	105 " "

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads—

Size of Pipe	Maximum No. of Heads Allowed
$1\frac{1}{4}$ inch	1 head
$1\frac{1}{2}$ " "	2 heads
2 " "	3 " "
$2\frac{1}{2}$ " "	4 " "
3 " "	6 " "
4 " "	12 " "
5 " "	21 " "
6 " "	40 " "
7 " "	60 " "
8 " "	84 " "

When it is desired to use pipe of larger size than eight (8) inches in diameter, special ruling will be required by the administrative official having jurisdiction as to the permissibility of its use and the number of heads that may be fed thereby.

Where practicable, it is desirable to arrange the piping so that the number of heads on a branch line will not exceed eight.

When the piping is arranged on the "gridiron" plan, the permissible number of heads may be doubled, provided the feed main is of the size indicated in the schedule for the total number of heads.

Where feed mains supply branch lines of only two heads each, the conditions approach those of long single lines. Such feed mains shall usually be centrally supplied where there are over eight (8) or ten (10) branch lines. Branch lines up to fourteen (14) in number may be fed from end, provided a two and one-half ($2\frac{1}{2}$) inch pipe does not supply more than sixteen (16) standard one-half ($\frac{1}{2}$) inch heads, in lieu of twenty (20).

Buildings having slatted floors, or large unprotected floor openings without approved stops, shall be treated as one room with reference to the pipe sizes, and the feed main shall be of sufficient size to accommodate the number of heads called for. Larger pipe sizes than are allowed in the schedule for a given number of heads may be required wherever the construction or conditions introduce unusually long runs of feed mains or many angles. Buildings with blind attics with small unprotected openings to floor below, may be piped from the system on the ceiling of floor below, provided pipe size schedule is not overloaded on sizes three (3) inches or under.

Rule 16. Feed Mains. The size of feed mains shall not be less than the size of riser and shall be arranged to run as direct as possible from source of water supply to riser.

Feed mains for stair or other towers without approved stops between floors, when piped on independent riser, shall be of sufficient size to accommodate the total number of sprinklers in such tower.

Rule 17. Risers. There shall be one or more separate risers in each building and in each section of the building divided by fire walls. Risers shall be arranged to provide "Center Central" or "Side Central" supply to feed main. Each riser shall be of sufficient size to supply all the heads on said riser in one story, according to the schedule of pipe sizes in Rule 15.

In buildings of fireproof construction, and for the purposes of this rule, a blank wall, or one in which the openings are protected by standard fire doors, may be considered as a fire wall, if of equivalent construction.

If the conditions warrant, special permission will be granted allowing the heads in a fire section of small area to be fed from the risers in another section, provided the total number of heads in such area does not exceed the following number per floor:

(a) For standard one-half ($\frac{1}{2}$) inch heads, 48.

(b) For Conran* one (1) inch heads, 12.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, 8.

Risers shall not be located close to windows, properly protected from mechanical injury and freezing and shall be properly supported on foundations and by floor plates, clamps, couplings or hangers.

No connections, such as for sill cocks, house service or hose outlets, shall be made with a sprinkler system riser or any part thereof.

Where gravity and pressure tanks feed through a common discharge pipe or "dead riser" to the foot of a riser and an air lock is likely to develop the discharge pipe of the gravity tank shall connect with the discharge pipe, or "dead riser", forty (40) feet below the bottom of the pressure tank.

PUBLIC HEARING

Rule 18. Pipes and Fittings. All pipe shall be full-weight standard wrought iron or steel threaded pipe, well reamed and screwed up tight into fittings without reducing the waterway. Fittings shall be standard cast iron fittings, and shall be long turn, pattern on feed mains and risers.

Such fittings shall be designed and guaranteed for a working pressure of 150 pounds per square inch and must be capable of withstanding a hydrostatic test pressure of 750 pounds per square inch without failure.

All pipe shall be secured to the ceiling, walls and other parts of the building with standard steel, wrought or malleable iron hangers.

Extra heavy fittings shall be employed where the normal pressure in the pipe system exceeds one hundred and fifty (150) pounds per square inch, and shall be designed for a working pressure of 250 pounds per square inch and be capable of withstanding a hydrostatic test pressure of 1,250 pounds per square inch without failure.

All underground pipe shall comply with the specifications for cast iron pipe of the American Water Works Association.

Rule 19. Protection of Pipes and Sprinklers. When exposed to moisture, sprinkler pipes and hangers shall be protected against corrosion whenever found necessary by thoroughly cleaning the pipe of all scale and grease and painting with a coat of red lead and linseed oil paint or other acceptable moisture resistive paint. When exposed to chemical fumes, the pipe and fittings shall be coated with graphite or other approved chemical resistive paint. Care shall be taken not to paint the sprinkler heads.

Supply pipes of risers in low basements or low spaces under ground floors exposed to frost, shall be properly protected by a masonry or wood enclosure, properly heated, or filled with mineral wool, sawdust or tar mixed with granulated cork, extending below bottom of pipe and through the top flooring of ground floor, or the pipe shall be protected with three alternate layers of one-inch hair felt and building paper or by other approved method. When of wood, such enclosure shall be constructed double with a layer of tar paper between the two thicknesses of wood.

Where risers, drains, heating pipes, etc., pass through cinder concrete floors or partitions, they shall be protected with a metal sleeve or be grouted with cement mortar.

Wherever sprinklers are exposed to corrosion, the heads shall be protected with an approved hermetically sealed cover, or with an approved wax coating.

Rule 20. Drainage. All sprinkler pipe and fittings shall be so installed that they can be thoroughly drained, and where practicable, all piping shall be arranged to drain at the main drips.

Drains or drip pipes shall be so arranged as not to expose any part of the sprinkler system to frost, and shall be so connected, either by check valves or other means, that they will not [overthrow] overflow domestic service or other connections to the same sewer or house drain, or if carried through the wall and exposed to the weather, they shall be fitted with hoods or down-turned elbows.

Drains, pitched not less than one-quarter ($\frac{1}{4}$) inch in ten (10) feet, shall be installed:

- At the base of the main riser;
- At each alarm valve;
- At each dry-pipe valve;
- At each gravity tank;
- At each pressure tank.
- At each fire department connection;

On each floor, if independent floor control valves are used; and

At each supply main, when the water in the same cannot be removed through any of the above drains. Such drains shall be installed with controlling valves so that flowing tests may be made to determine if the water supplies or connections from yard mains to the inside of the build-

ing are in order without causing water damage or overflowing service connections to the same house drain. Any such drain shall be not less than two (2) inches in size except that drains at independent floor valves [may be one and one-quarter ($1\frac{1}{4}$) inches in size] shall be not less than 1 inch in size where floor valves are not over $2\frac{1}{2}$ inches in size and $1\frac{1}{4}$ inches where floor valves are larger, and connected to a main drain riser of not less than $1\frac{1}{2}$ inches in size. The drain at the main riser shall discharge into a cone or sight drain, or if carried through the wall and exposed to the weather, it shall be fitted with a hood or down-turned elbow.

At an alarm valve at the top of a riser in a down-fed system a drain shall not be required.

At each gravity or pressure tank erected above roof of a building there shall be a 4-inch valved drain connection so arranged as to discharge on roof of building. And where a tank is on a separate structure altogether independent of buildings drain connection to be arranged to discharge at ground level.

On automatic wet pipe systems, the horizontal branch pipes shall be pitched not less than one-quarter ($\frac{1}{4}$) inch in ten (10) feet to drain towards the sources of supply with drip valves at the low points.

On automatic dry-pipe systems, branch pipes shall be pitched at least one-half ($\frac{1}{2}$) inch in ten (10) feet.

Rule 21. Test Pipe. [On] In all wet-pipe automatic sprinkler systems a test pipe of not less than $\frac{3}{4}$ inch in diameter shall be connected directly with each [riser] system but shall be connected to a pipe of not less than $1\frac{3}{4}$ inches in diameter in upper story and arranged to discharge, through a $\frac{1}{2}$ -inch brass outlet, preferably to a point where it can readily be seen. With long runs or many angles, size of test pipe [shall] should be increased to one (1) inch or larger. Controlling valve should be located at a sufficient distance from where the test pipe passes through the wall of the building so as to reduce to a minimum the chance of freezing of water in test pipe.

In all dry-pipe automatic sprinkler systems a $\frac{3}{4}$ -inch inspector's test pipe shall be installed at the end of the most distant branch line and fitted with a $\frac{3}{4}$ -inch shut-off valve stopped with a brass plug.

Rule 22. Pressure Gauges. A four and one-half ($4\frac{1}{2}$) inch double-spring Bourdon pressure gauge shall be provided in all automatic sprinkler systems as follows:

- Above dry-pipe valves;
- Below dry-pipe valves;
- At the pressure tank;
- At the air compressor;
- Above the alarm valve;
- Below the alarm valve; and

In the connections from city water supply.

Provision may be made for taking the pressure both above and below the alarm valve and the dry-pipe valve with only one gauge at each valve.

A gauge shall not be required at an alarm valve located at the top of a riser in a down-fed system.

Gauge connections shall be taken from the supply main or riser and not from the two-inch drain or test pipe.

Gauges shall be installed in a suitable place protected from freezing and be controlled by a valve with arrangements for draining. A plugged outlet, not less than one-quarter ($\frac{1}{4}$) inch in size, shall be located between each valve and gauge for purpose of installing the inspector's gauge.

Rule 23. Valves. All valves two (2) inches in diameter and under shall be of brass or bronze, or other approved [non-corrodible] non-corrosive material. Valves over two (2) inches in diameter shall be of brass, or bronze or iron body, brass mounted, or of other approved [non-corrodible] non-corrosive material.

All sidewalk Siamese inlet valves, caps and chains shall be of galvanized cast iron or other approved [non-corrodible] non-corrosive material.

PUBLIC HEARING

All gate valves shall be solid or double wedge disc, sufficing box pattern with hand wheel, outside screw and yoke, or other approved indicator pattern.

All check valves shall be approved straight way regrinding pattern, so built that the clappers may be readily removed for repairs.

Rule 24. Water Supply Gate Valves. The piping connecting each source of water supply with the sprinkler system shall be provided with a gate valve of the outside screw and yoke type, sealed open and tagged to designate its purpose, so located as to control each source of water supply except that from fire department hose connections. All such gate valves shall be located within the building where easily visible and readily accessible and as close as possible to the supply inlet.

Rule 25. Water Supply Check Valves. The piping connecting each source of water supply with the sprinkler system, including fire department connections, shall be provided with a check valve.

On two-source systems, check valves shall have a gate valve on each side to permit repair of check without shutting off both supplies, except that where the two sources of supply consist of tanks located above the highest line of sprinklers, a gate valve need only be provided on the downstream side of each check valve.

Rule 26. Control Valves. All automatic sprinkler systems shall be provided with a main control or shutoff valve arranged to be readily accessible and sealed in the open position; except that when the sprinkler system is fed from water supplies on the roof of the building, independent and readily accessible floor control valves, sealed in the open position, may be installed.

When not more than ten (10) standard one-half ($\frac{1}{2}$) inch sprinkler heads or three (3) Conran* heads in any automatic wet pipe system are exposed to cold and subject to freezing, shutoff valves may be provided to discontinue the water supply to such heads between November 1 and April 1. A greater number of heads than specified above, located in places which cannot be properly heated, shall be controlled by an automatic dry-pipe valve.

Rule 27. Dry-Pipe Valves. A dry-pipe valve shall be taken to mean a valve automatically controlling the water supply of the sprinkler system in such a manner that under normal conditions its piping system beyond the valve is maintained dry, but in the event of fire, the valve automatically releases the water into the sprinkler system, for fire extinguishing purposes.

Dry-pipe valves shall, for the purpose of these rules, be classified as follows:

Type A, in which the valve is actuated by the release of compressed air in the sprinkler piping system, due to the opening of a sprinkler head; and

Type B, in which the valve is actuated by an approved trip under electric control of an approved automatic thermostatic fire alarm system.

Dry-pipe valves shall be located as near as practicable to the sprinkler system in an enclosed and accessible place protected from mechanical injury and freezing.

When anti-columning pipes are used, they shall be either lead lined or of brass.

Automatic wet-pipe sprinkler systems in which only twenty-five (25) per cent of the heads are required to be maintained dry for protection from freezing, shall have only such heads under dry-pipe valve control.

(a) When "Type A" valve is installed, the air pressure in sprinkler systems under such dry-pipe valve control shall not exceed forty (40) pounds per square inch, nor be permitted to fall below twenty-five (25) pounds per square inch, nor shall it be less than one-sixth ($\frac{1}{6}$) of the water pressure in any case.

The air compressor shall have a capacity of not less than eleven (11) cubic feet per minute and the air supply for the pump shall be taken, if possible, from a room containing dry air, or it shall be passed through a drying chamber containing calcium chloride, in order to avoid the introduction of moisture into the system.

The air pressure on such dry-pipe systems shall be maintained throughout the year.

Not more than the following number of heads shall be controlled by one "Type A" dry-pipe valve:

- (a) For standard one-half ($\frac{1}{2}$) inch heads400
- (b) For Conran* one (1) inch heads100
- (c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads 64

Where equipped with an approved quick-opening device the following number of heads may be controlled by one "Type A" dry-pipe valve:

- (a) For Standard one-half ($\frac{1}{2}$) inch heads800
- (b) For Conran* one (1) inch heads200
- (c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads 128

(b) When "Type B" valve is installed the actuating alarm system shall be designed to operate at a temperature lower than that required to open the sprinkler heads, and all connections between the alarm system and the dry-pipe valve shall be adequately protected against injury of any kind.

When required by the administrative official having jurisdiction, the dead end of every feed main in such dry-pipe system shall be provided with an air relief valve or vent, so constructed as to be normally open in order to permit the free escape of air from the system, but to close automatically against the escape of water.

Not more than the following number of heads shall be controlled by one "Type B" dry-pipe valve:

- (a) For Standard one-half ($\frac{1}{2}$) inch heads500
- (b) For Conran* one (1) inch heads125
- (c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads 84

Rule 28. Alarm Valve. All automatic wet pipe sprinkler systems shall be equipped with an alarm valve so constructed that a flow of water through a one-half ($\frac{1}{2}$) inch orifice will operate an electric or mechanical gong.

Dry pipe valves shall be equipped with a reliable device to give either an electrical or mechanical alarm.

Rule 29. High and Low Water and Pressure Alarm. All gravity tanks shall be equipped with a device to indicate when the water falls below or rises above the normal level in the tank, with an indicator or alarm located in the engineer's room near the pump.

All pressure tanks shall be equipped with a device to indicate when the pressure in the tank falls below seventy (70) or rises above eighty (80) pounds per square inch with an indicator or alarm located in the engineer's room [near the compressor].

Rule 30. Heating of Tanks. The water in all sprinkler tanks subject to freezing shall be protected by internally heating the water or enclosing the tank in a frost-proof house properly heated and lighted.

Rule 31. Concealed Pipe Systems. All pipe in concealed pipe systems shall be of standard full-weight wrought iron or steel, painted with two coats of protective paint, one before and one after installation. Such pipe shall be installed in ducts or be encased in cement mortar and shall be inspected prior to concealment. When installed in the concealed space between floor arches and ceiling, such pipe shall be supported by hangers and all pipe, fittings and hangers be protected with two coats of paint.

Rule 32. Preparation of Building. Floor or wall openings and other structural defects which prevent the banking up of heated air and retard the automatic action of sprinkler heads shall be provided with the necessary curtain boards and draft stops to permit specific control of the fire by the local sprinklers.

Curtain boards shall project at least three (3) inches below the lowest sprinkler.

PUBLIC HEARING

Rule 33. *Approval of Sprinkler System [Tests]. Before acceptance* all automatic sprinkler systems, excluding the water supply tanks, shall be subjected after installation to a hydrostatic pressure of a test of at least fifty (50) pounds per square inch in excess of that which will be normally carried and observed in the sprinkler system, such test pressure, however, never to be less than one hundred and fifty (150) pounds per square inch in any part of the system.

All pressure tanks shall be tested after erection to a test pressure of one and one-half (1½) times the working pressure. To prevent the possibility of serious water damage in case of a break, the pressure shall be maintained by a small pump, the main controlling gate being meanwhile kept shut. Brine or other corrosive chemicals shall not be used for testing systems.

In automatic dry-pipe systems with "Type A" valve control, an air pressure of forty (40) pounds per square inch shall be pumped up, be held for twenty-four (24) hours, and all leaks stopped which allow a loss of pressure of over two (2) pounds per square inch for the twenty-four (24) hours.

In the case of automatic dry-pipe systems with differential "Type A" valve, the valve shall be held off its seat during the test to prevent injuring the valve.

Non-automatic systems shall be tested after installation at not less than fifty (50) pounds per square inch in excess of the pressure necessary to reach the highest line of sprinklers.

All tests of installed systems shall be made by the contractor in the presence of the Fire Commissioner, or his authorized representative.

No piping, devices nor any portion of a newly constructed sprinkler system shall be covered up or permanently concealed until tested by the Bureau of Fire Prevention and approved of in writing, except piping passing through floors, walls, partitions or beams for distances equal to the thickness of such floors, walls, partitions or beams.

Rule 34. *Non-fireproof Business Buildings.* Automatic sprinklers required in non-fireproof business buildings under the provisions of Chapter 5, Article 4, Section 72, Code of Ordinances, unless otherwise specifically provided in these rules, shall consist of at least a One Source System.

Rule 35. *Dangerous or Hazardous Buildings.* Automatic sprinklers required in buildings having occupancies considered to be dangerous or hazardous by the Fire Commissioner shall consist of at least a one-source system unless otherwise specifically provided for in these rules.

Rule 36. *Factories and other Buildings.* Automatic sprinklers required in buildings under the provisions of the Code of Ordinances and the Labor Law shall consist of at least a one-source system.

Rule [35] 37. *Theatre Buildings.* Automatic sprinklers required in theatre buildings under the provisions of Chapter 5, Article 25, Section 524, Code of Ordinances, shall consist of at least a One Source System.

Rule [36] 38. *Firework Storage.* Automatic sprinklers required in buildings in which fireworks are stored or sold under the provisions of Chapter 10, Article 6, Section 92, Code of Ordinances, shall consist of a Two Source System.

Rule [37] 39. *Nitro-Cellulose Products.* Automatic sprinklers as required in buildings in which nitro-cellulose products are stored under the provisions of Chapter 10, Article 19, Section 232, Code of Ordinances, shall consist of a system supplied from both approved gravity tank supply and an approved pressure tank supply, except that no change shall be required in supplies to automatic sprinkler equipments previously approved by the Fire Commissioner as two source systems, in conformity with the provisions of this rule as in force up to December 1, 1921.

In buildings wherein are stored or handled only limited quantities of nitro-cellulose products, not exceeding 500 pounds, the automatic sprinklers may consist of a two source system as provided for in Rule 12.

Rule [38] 40. *Inflammable Motion-Picture Films.* Automatic sprinklers, required in buildings in which inflammable motion-picture films are stored under the provisions of Chapter 10, Article 20, Section 241, Code of Ordinances, shall consist of a system supplied from both an approved gravity tank supply and an approved pressure tank supply except that no change shall be required in supplies to automatic sprinkler equipments previously approved by the Fire Commissioner as two source systems in conformity with the provisions of this rule as in force up to December 1st, 1921.

Rule [39] 41. *Existing Installations and Approvals.* Automatic extinguisher systems and devices heretofore approved and accepted by the authorities having jurisdiction shall not be required to conform to the provisions of these rules; and all such systems heretofore installed shall not be required to be altered to conform to these rules so long as the fire hazard due to construction and occupancy of the building is not increased or where substantial additions or extensions in height or area is made to the building when these rules shall apply if deemed advisable or necessary by the Fire Commissioner and the system after inspection is found to be in good working order.

Rule 42. *Communicating Openings.* When a building fully equipped with sprinklers communicates with another not so equipped the openings must be protected by approved fire doors on both sides of the wall, one of which must be automatic.

Rule 43. *Maintenance Inspections.* Automatic sprinkler systems shall be inspected at least once a month by the person in charge of the building, or by other competent person employed by the owner, to see that all parts of the system are in perfect working order, and the fire department connection or connections, if any, ready for immediate use by the Fire Department. A detailed record of each inspection shall be kept for examination by a representative of the Fire Department.

There shall be kept available at all times in the premises a supply of extra sprinklers, never less than six (6), to replace promptly any fused or damaged sprinklers. And there shall be one or more employees instructed in the maintenance of sprinkler system.

Rule 44. *Open Sprinklers.* When open sprinklers are required for exposure protection by the Fire Department as specified in the Building Code they shall be installed in accordance with the rules of the National Board of Fire Underwriters. Plans for such installation to be filed with the Fire Department for approval.

CITY OF NEW YORK

BOARD OF ESTIMATE AND APPORTIONMENT

AMENDED BUILDING ZONE RESOLUTION.

(Adopted October 3, 1924)

With Amendments to June 12, 1925.

A Resolution Regulating and Limiting the Height and Bulk of Buildings Hereafter Erected and Regulating and Determining the Area of Yards, Courts and Other Open Spaces, and Regulating and Restricting the Location of Trades and Industries and the Location of Buildings Designed for Specified Uses and Establishing the Boundaries of Districts for the Said Purposes.

Be it Resolved by the Board of Estimate and Apportionment of The City of New York:

Article I—Definitions.

§ 1. *Definitions.* Certain words in this resolution are defined for the purposes thereof as follows:

(a) Words used in the present tense include the future; the singular number includes the plural and the plural the singular; the word "lot" includes the word "plot"; the word "building" includes the word "structure."

(b) The "street line" is the dividing line between the street and the lot.

(c) The "width of the street" is the mean of the distances between the sides thereof within a block. Where a street borders a public place, public park or navigable body of water the width of the street is the mean width of such street plus the width, measured at right angles to the street line, of such public place, public park or body of water.

(d) The "curb level," for the purpose of measuring the height of any portion of a building, is the mean level of the curb in front of such portion of the building. But where a building is on a corner lot the curb level is the mean level of the curb on the street of greatest width. If such greatest width occurs on more than one street the curb level is the mean level of the curb on that street of greatest width which has the highest curb elevation. The "curb level" for the purpose of regulating and determining the area of yards, courts and open spaces is the mean level of the curb at that front of the building where there is the highest curb elevation. Where no curb elevation has been established or the building does not adjoin the street the average ground level of the lot shall be considered the curb level.

(e) A "street wall" of a building, at any level, is the wall or part of the building nearest to the street line.

(f) The "height of a building" is the vertical distance measured in the case of flat roofs from the curb level to the highest point of the roof beams adjacent to the street wall, and in the case of pitched roofs from the curb level to the mean height level of the gable. Where no roof beams exist or there are structures wholly or partly above the roof the height shall be measured from the curb level to the level of the highest point of the building. Where a building is a tenement house as defined in the Tenement House Law the height of the building on the street line shall be measured as prescribed in said law for the measurement of the height of a tenement house and such measurement shall be from the curb level as that term is used in said law.

(g) The "depth of a lot" is the mean distance from the street line of the lot to its rear line measured in the general direction of the side lines of the lot.

(h) A "rear yard" is an open unoccupied space on the same lot with a building between the rear line of the building and the rear line of the lot.

(i) The "depth of a rear yard" is the mean distance between the rear line of the building and the rear line of the lot.

(j) Lots or portions of lots shall be deemed "back to back" when they are on opposite sides of the same part of

a rear line common to both and the opposite street lines on which the lots front are parallel with each other or make an angle with each other of not over 45 degrees.

(k) A "court" is an open unoccupied space, other than a rear yard, on the same lot with a building. A court not extending to the street or to a rear yard is an "inner court." A court extending to the street or a rear yard is an "outer court." A court on the lot line extending through from the street to a rear yard or another street is a "side yard."

(l) The "height of a yard or a court" at any given level shall be measured from the lowest level of such yard or court as actually constructed or from the curb level, if higher, to such level. The highest level of any given wall bounding a court or yard shall be deemed to be the mean height of such wall. Where a building is a tenement house, as defined in the Tenement House Law, the height of a yard or a court shall be measured as prescribed in such law.

(m) The "least dimension" of a yard or court at any level is the least of the horizontal dimensions of such yard or court at such level. If two opposite sides of a yard or court are not parallel the horizontal dimension between them shall be deemed to be the mean distance between them.

(n) The "length of an outer court" at any given point shall be measured in the general direction of the side lines of such court from the end opposite the end opening on a street, or a rear yard, to such point.

Article II—Use Districts.

§ 2. *Use Districts.* For the purpose of regulating and restricting the location of trades and industries and the location of buildings designed for specified uses, the City of New York is hereby divided into three classes of districts: (1) residence districts, (2) business districts and (3) unrestricted districts; as shown on the amended use district map which accompanies this resolution and is hereby declared to be part hereof. The use districts designated on said amended map, consisting of thirty-five sheets and an index sheet, each dated July 1, 1924, and signed by the Chief Engineer of the Board of Estimate and Apportionment, are hereby established. The amended use district map designations and amended map designation rules which accompany said amended use district map are hereby declared to be part thereof. No building or premises shall be erected or used for any purpose other than a purpose permitted in the use district in which such building or premises is located.

§ 3. *Residence Districts.* In a residence district no building shall be erected other than a building, with its usual accessories, arranged, intended or designed exclusively for one or more of the following specified uses:

(1) Dwellings, which shall include dwellings for one or more families and boarding houses and also hotels which have thirty or more sleeping rooms.

(2) Clubs, excepting clubs the chief activity of which is a service customarily carried on as a business.

(3) Churches.

(4) Schools, libraries or public museums.

(5) Philanthropic or eleemosynary uses or institutions, other than correctional institutions.

(6) Hospitals and sanitariums.

(7) Railroad passenger stations.

(8) Farming, truck gardening, nurseries or green houses.

In a residence district no building or premises shall be used for any use other than a use above specified for which buildings may be erected and for the accessory uses customarily incident thereto. The term accessory use shall not include a business nor shall it include any building or use not located on the same lot with the building or use to which it is accessory. A private garage for more than five motor vehicles shall not be deemed an accessory use.

NOTICE

§ 4. *Business Districts.* (a) In a business district no building or premises shall be used, and no building shall be erected which is arranged, intended or designed to be used, for any of the following specified trades, industries or uses:

- (1) Ammonia, chlorine or bleaching powder manufacture.
- (2) Asphalt manufacture or refining.
- (3) Assaying (other than gold or silver).
- (4) Blacksmithing or horseshoeing.
- (5) Boiler making.
- (6) Brewing or distilling of liquors.
- (7) Carpet cleaning.
- (8) Celluloid manufacture.
- (9) Crematory.
- (10) Distillation of coal, wood or bones.
- (11) Dyeing or dry cleaning.
- (12) Electric central station power plant.
- (13) Fat rendering.
- (14) Fertilizer manufacture.
- (15) Garage for more than five motor vehicles, not including a warehouse where motor vehicles are received for dead storage only, and not including a salesroom where motor vehicles are kept for sale or for demonstration purposes only.
- (16) Gas (illuminating or heating) manufacture or storage.
- (17) Glue, size and gelatine manufacture.
- (18) Incineration or reduction of garbage, offal, dead animals or refuse.
- (19) Iron, steel, brass or copper works.
- (20) Junk, scrap paper or rag storage or baling.
- (21) Lamp black manufacture.
- (22) Lime, cement or plaster of paris manufacture.
- (23) Milk bottling and distributing station.
- (24) Oil cloth or linoleum manufacture.
- (25) Paint, oil, varnish or turpentine manufacture.
- (26) Petroleum refining or storage.
- (27) Printing ink manufacture.
- (28) Raw hides or skins—storage, curing or tanning.
- (29) Repair shop for motor vehicles.
- (30) Rubber manufacture from the crude material.
- (31) Saw or planing mill.
- (32) Shoddy manufacture or wool scouring.
- (33) Slaughtering of animals.
- (34) Smelting.
- (35) Soap manufacture.
- (36) Stable for more than five horses.
- (37) Starch, glucose or dextrine manufacture.
- (38) Stock yard.
- (39) Stone or monumental works.
- (40) Sugar refining.
- (41) Sulphurous, sulphuric, nitric or hydrochloric acid manufacture.
- (42) Tallow, grease or lard manufacturing or refining.
- (43) Tar distillation or manufacture.
- (44) Tar roofing or tar waterproofing manufacture.
- (45) Refrigerating plants, coal yards and coal pockets.
- (46) Gasoline service station.

(b) In a business district no building or premises shall be used, and no building shall be erected, which is arranged, intended or designed to be used for any trade, industry or use that is noxious or offensive by reason of the emission of odor, dust, smoke, gas or noise but car barns or places of amusement shall not be excluded.

(c) In a business district no building or premises shall be used, and no building shall be erected, which is arranged, intended or designed to be used for any kind of manufacturing, except that any kind of manufacturing not included within the prohibitions of paragraphs a and b of this section may be carried on provided not more than 25 per cent. of the total floor space of the building is so used, but space equal to the area of the lot may be so used in any case, although in excess of said 25 per cent. The printing of a

newspaper shall not be deemed manufacturing. No use permitted in a residence district by section 3 shall be excluded from a business district.

§ 5. *Unrestricted Districts.* The term "unrestricted district" is used to designate the districts for which no regulations or restrictions are provided by this article.

§ 6. *Existing Buildings and Premises.* (a) Any use existing in any building or premises on July 25, 1916, and not conforming to the regulations of the use district in which it is maintained, may be continued therein. No then existing building designed, arranged, intended or devoted to a use not permitted by this article in the district in which such use is located shall be enlarged, extended, reconstructed or structurally altered unless such use is changed to a use permitted in the district in which such building is located. Such building may, however, be reconstructed or structurally altered to an extent not greater than 50 per cent. of the value of the building, exclusive of foundations, provided that no use in such building is changed or extended, except as authorized in paragraph b of this section, and provided, further, that no use included in any one of the enumerated subdivisions of paragraph a of section 4 is changed into a use included in any other enumerated subdivision of paragraph a of section 4 or into a use prohibited by paragraph b of section 4, and also provided that no use prohibited by paragraph b of section 4 is changed into another use prohibited by paragraph b of section 4 or into a use included in an enumerated subdivision of paragraph a of section 4.

(b) Any use existing in any building or premises on July 25, 1916, and not conforming to the regulations of the use district in which it is maintained may be changed, and such use may be extended throughout the building, provided that in either case:

(1) No structural alterations shall be made in the building, except as authorized by paragraph a of this section, and

(2) In a residence district no portion of a building devoted to a use included in subdivision 1 of section 3 shall be changed to any use prohibited in a residence district, and

(3) In a residence district no building or premises, unless devoted to one of the uses that is by section 4 prohibited in a business district, shall be changed to any of such uses, and

(4) In a residence or business district no building or part thereof and no premises, unless devoted to one of the uses that is by paragraph a or b of section 4 prohibited in a business district, shall be changed to any of such uses.

If a use is changed as authorized in this section, the new use may thereafter be changed, subject to the limitations imposed by subdivisions 1, 2, 3 and 4 of this paragraph.

§ 7. *Use District Exceptions.* The Board of Appeals, created by chapter 503 of the laws of 1916, may, in appropriate cases, after public notice and hearing, and subject to appropriate conditions and safeguards, determine and vary the application of the use district regulations herein established in harmony with their general purpose and intent as follows:

(a) Permit the extension of an existing building and the existing use thereof upon the lot occupied by such building at the time of the passage of this resolution or permit the erection of an additional building upon a lot occupied at the time of the passage of this resolution by a commercial or industrial establishment and which additional building is a part of such establishment;

(b) Where a use district boundary line divides a lot in a single ownership at the time of the passage of this resolution, permit a use authorized on either portion of such lot to extend to the entire lot, but not more than 25 feet beyond the boundary line of the district in which such use is authorized;

(c) Permit the extension of an existing or proposed building into a more restricted district under such conditions as will safeguard the character of the more restricted district;

NOTICE

(d) Permit in a residence district a central telephone exchange or any building or use in keeping with the uses expressly enumerated in section 3 as the purposes for which buildings or premises may be erected or used in a residence district;

(e) Permit in a business district the erection or extension of a garage or stable in any portion of a street between two intersecting streets in which portion there exists a garage for more than five motor vehicles or a stable for more than five horses which existed on July 25, 1916.

(f) Grant in undeveloped sections of the city temporary and conditional permits for not more than two years for structures and uses in contravention of the requirements of this article.

(g) Permit in a business or residence district the erection of a garage provided the petitioner files the consents duly acknowledged of the owners of 80 per cent. of the frontage deemed by the Board to be immediately affected by the proposed garage. Such permit shall specify the maximum size or capacity of the garage and shall impose appropriate conditions and safeguards upon the construction and use of the garage.

Article III—Height Districts.

§ 8. *Height Districts.* For the purpose of regulating and limiting the height and bulk of buildings hereafter erected, the City of New York is hereby divided into eight classes of districts: (a) one-quarter times districts; (b) one-half times districts; (c) three-quarter times districts; (d) one times districts; (e) one and one-quarter times districts; (f) one and one-half times districts; (g) two times districts; (h) two and one-half times districts; as shown on the amended height district map which accompanies this resolution and is hereby declared to be part hereof. The height districts designated on said amended map, consisting of thirty-five sheets and an index sheet, each dated July 1, 1924, and signed by the Chief Engineer of the Board of Estimate and Apportionment, are hereby established. The amended height district map designations and amended map designation rules which accompany said amended height district map are hereby declared to be part thereof. No building or part of a building shall be erected except in conformity with the regulations herein prescribed for the height district in which such building is located.

(a) In a one-quarter times district no building shall be erected to a height in excess of one-quarter times the width of the street, but for each two feet that the building or a portion of it sets back from the street line one foot shall be added to the height limit of such building or such portion thereof.

(b) In a one-half times district no building shall be erected to a height in excess of one-half times the width of the street, but for each one foot that the building or a portion of it sets back from the street line one foot shall be added to the height limit of such building or such portion thereof.

(c) In a three-quarter times district no building shall be erected to a height in excess of three-quarter times the width of the street, but for each one foot that the building or a portion of it sets back from the street line one foot shall be added to the height limit of such building or such portion thereof.

(d) In a one times district no building shall be erected to a height in excess of the width of the street, but for each one foot that the building or a portion of it sets back from the street line two feet shall be added to the height limit of such building or such portion thereof.

(e) In a one and one-quarter times district no building shall be erected to a height in excess of one and one-quarter times the width of the street, but for each foot that the

building or a portion of it sets back from the street line two and one-half feet shall be added to the height limit of such building or such portion thereof.

(f) In a one and one-half times district no building shall be erected to a height in excess of one and one-half times the width of the street, but for each one foot that the building or a portion of it sets back from the street line three feet shall be added to the height limit of such building or such portion thereof.

(g) In a two times district no building shall be erected to a height in excess of twice the width of the street, but for each one foot that the building or a portion of it sets back from the street line four feet shall be added to the height limit of such building or such portion thereof.

(h) In a two and one-half times district no building shall be erected to a height in excess of two and one-half times the width of the street, but for each one foot that the building or a portion of it sets back from the street line five feet shall be added to the height limit of such building or such portion thereof.

§ 9. *Height District Exceptions.* (a) On streets less than 50 feet in width the same height regulations shall be applied as on streets 50 feet in width and, except for the purpose of paragraph d of this section, on streets more than 10 feet in width the same height regulations shall be applied as on streets 100 feet in width.

(b) Along a narrower street near its intersection with a wider street, any building or any part of any building fronting on the narrower street within 100 feet, measured at right angles to the side of the wider street, shall be governed by the height regulations provided for the wider streets. A corner building on such intersecting streets shall be governed by the height regulations provided for the wider street for 150 feet from the side of such wider street, measured along such narrower street.

(c) Above the height limit at any level for any part of a building a dormer, elevator bulkhead or other structure may be erected provided its frontage length on any given street be not greater than 60 per cent. of the length of such street frontage of such part of the building. Such frontage length of such structure at any given level shall be decreased by an amount equal to one per cent. of such street frontage of such part of the building for every foot such level is above such height limit. If there are more than one such structure their aggregate frontage shall not exceed the frontage length above permitted at any given level.

(d) If the area of the building is reduced so that above given level it covers in the aggregate not more than 25 per cent. of the area of the lot, the building above such level shall be excepted from the foregoing provisions of this article. Such portion of the building may be erected to any height, provided that the distance which it sets back from the street line on each street on which it faces, plus half of the width of the street, equals at least 75 feet. But for each one per cent. of the width of the lot on the street line that such street wall is less in length than such width of the lot such wall may be erected four inches nearer to the street line.

(e) When at the time plans are filed for the erection of a building there are buildings in excess of the height limit herein provided within 50 feet of either end of the street frontage of the proposed building or directly opposite such building across the street, the height to which the street wall of the proposed building may rise shall be increased by an amount not greater than the average excess height of the walls on the street line within 50 feet of either end of the street frontage of the proposed building and at right angle to the street frontage of the proposed building on the opposite side of the street. The average amount of such excess height shall be computed by adding together the excess heights above the prescribed height limit for the street frontage in question of all of the walls on the street line of the buildings and parts of buildings within the above defined

NOTICE

frontage and dividing the sum by the total number of buildings and vacant plots within such frontage.

(f) Nothing in this article shall prevent the projection of a cornice beyond the street wall to an extent not exceeding five per cent. of the width of the street nor more than five feet in any case. Nothing in this article shall prevent the erection above the height limit of a parapet wall or cornice solely for ornament and without windows extending above such height limit not more than five per cent. of such height limit, but such parapet wall or cornice may in any case be at least five and one-half feet high above such height limit.

(g) The provisions of this article shall not apply to the erection of church spires, belltowers, chimneys, flues or gas holders.

(h) Where not more than 50 feet of a street frontage would otherwise be subjected to a height limit lower than that allowed immediately beyond both ends of such frontage, the height limit on such frontage shall be equal to the lesser of such greater height limits.

(i) If an additional story or stories are added to a building existing at the time of the passage of this resolution, the existing walls of which are in excess of the height limits prescribed in this article, the height limits for such additional story or stories shall be computed from the top of the existing walls as though the latter were not in excess of the prescribed height limits and the carrying up of existing elevator and stair enclosures shall be exempted from the provisions of this article.

Article IV—Area Districts.

§ 10. *Area Districts.* For the purpose of regulating and determining the area of yards, courts and other open spaces for buildings hereafter erected, the City of New York is hereby divided into six classes of area districts: A, B, C, D, E and F; as shown on the amended area district map which accompanies this resolution and is hereby declared to be part hereof. The area districts designated on said amended map, consisting of thirty-five sheets and an index sheet, each dated July 1, 1924, and signed by the Chief Engineer of the Board of Estimate and Apportionment, are hereby established. The amended area district map designations and amended map designation rules which accompany said amended area district map are hereby declared to be a part thereof. No building or part of a building shall be erected except in conformity with the regulations herein prescribed for the area district in which such building is located. Unless otherwise expressly provided the term rear yard, side yard, outer court or inner court when used in this article shall be deemed to refer only to a rear yard, side yard, outer court or inner court required by this article. No lot area shall be so reduced or diminished that the yards, courts or open spaces shall be smaller than prescribed in this article.

§ 11. *A Districts.* In an A district a court at any given height shall be at least one inch in least dimension for each one foot of such height.

§ 12. *B District.* In a B district a rear yard at any given height shall be at least two inches in least dimension for each one foot of such height. The depth of a rear yard at its lowest level shall be at least 10 per cent. of the depth of the lot, but need not exceed 10 feet at such level. An outer court or a side yard at any given height shall be at least one inch in least dimension for each one foot of such height. An outer court at any given point shall be at least one and one-half inches in least dimension for each one foot of length. But for each one foot that an outer court at any given height would, under the above rules, be wider in its least dimension for such height than the minimum required by its length, one inch shall be deducted from the required least dimension for such height for each 24 feet of such height. A side yard for its length within 50 feet of the street may for the purposes of the above rule be considered an outer court.

§ 13. *C Districts.* (a) In a C district a rear yard at any given height shall be at least three inches in least dimension

for each one foot of such height. The depth of a rear yard at its lowest level shall be at least 10 per cent. of the depth of the lot, but need not exceed 10 feet at such level. An outer court or a side yard at any given height shall be at least one and one-half inches in least dimension for each one foot of such height. An outer court at any given point shall be at least one and one-half inches in least dimension for each one foot of length. On a lot not more than 30 feet in mean width an outer court or a side yard at any given height shall be not less than one inch in least dimension for each one foot of such height, and an inner court at any given height shall be either (1) not less than two inches in least dimension for each one foot of such height or (2) it shall be of an equivalent area as hereinafter specified in paragraph c of section 18.

(b) If the owner or owners of any part of a C district set aside perpetually for the joint recreational use of the residents of such part designated by them, an area at least equal to 10 per cent. of the area of such part in addition to all yard and court requirements for a B district, such part shall be subject to the regulations herein prescribed for a B district. Such joint recreational space shall be composed of one or more tracts, each of which shall be at least 40 feet in least dimension and 5,000 square feet in area and shall be approved by the Board of Appeals as suitable for the joint recreational use of such residents.

§ 14. *D Districts.* (a) In a D district a rear yard at any given height shall be at least four inches in least dimension for each one foot of such height. The depth of a rear yard at its lowest level shall be at least 10 per cent. of the depth of the lot, but need not exceed 10 feet at such level. If a building in a D district is located in a residence district as designated on the amended use district map, the depth of a rear yard at its lowest level shall be at least 20 per cent. of the depth of the lot, but need not exceed 20 feet at such level. However, for each one foot in excess of 10 feet of the depth of such rear yard at its lowest level, there may be substituted one foot of depth of unoccupied space across the whole width of the front of the lot at the curb level between the street line and the street wall of the building.

(b) In a D district an outer court or a side yard at any given height shall be at least two inches in least dimension for each one foot of such height. An outer court at any given point shall be at least two inches in least dimension for each one foot of length. On a lot not more than 30 feet in mean width an outer court or a side yard at any given height shall be not less than one and one-half inches in least dimension for each one foot of such height. On such lot an outer court at any given point shall be not less than one and one-half inches in least dimension for each one foot of length. On such lot an inner court at any given height shall be either (1) not less than three inches in least dimension for each one foot of such height or (2) it shall be of an equivalent area as specified in paragraph c of section 18.

(c) In a D district no building located within a residence district as designated on the amended use district map shall occupy at the curb level more than 60 per cent. of the area of the lot, if an interior lot, or 80 per cent. if a corner lot. In computing such percentage any part of the area of any corner lot in excess of 8,000 square feet shall be considered an interior lot.

(d) If the owner or owners of any part of a D district set aside perpetually for the joint recreational use of the residents of such part designated by them, an area at least equal to 10 per cent. of the area of such part in addition to all yard and court requirements for a C district, such part shall be subject to the regulations herein prescribed for a C district. Such joint recreational space shall be composed of one or more tracts, each of which shall be at least 40 feet in least dimension and 5,000 square feet in area and shall be approved by the Board of Appeals as suitable for the joint recreational use of such residents.

NOTICE

§ 15. *E Districts.* (a) In an E district a rear yard at any given height shall be at least five inches in least dimension for each one foot of such height. The depth of a rear yard at its lowest level shall be at least 15 per cent. of the depth of the lot, but need not exceed 15 feet at such level. If a building in an E district is located in a residence district as designated on the amended use district map, the depth of a rear yard at its lowest level shall be at least 25 per cent. of the depth of the lot, but need not exceed 25 feet at such level. However, for each one foot in excess of 10 feet of the depth of such rear yard at its lowest level, there may be substituted one foot of depth of unoccupied space across the whole width of the front of the lot at the curb level between the street line and the street wall of the building. In an E district on at least one side of every building located within a residence district there shall be a side yard along the side lot line for the full depth of the lot or back to the rear yard.

(b) In an E district an outer court or side yard at any given height shall be at least two and one-half inches in least dimension for each one foot of such height. On a lot not more than 50 feet in mean width an outer court or a side yard at any given height shall be at least two inches in least dimension for each one foot of such height. An outer court at any given point shall be at least two and one-half inches in least dimension for each one foot of length.

(c) In an E district no building located within a residence district as designated on the amended use district map shall occupy at the curb level more than 50 per cent. of the area of the lot, if an interior lot, or 70 per cent. if a corner lot, and above a level 18 feet above the curb no building shall occupy more than 30 per cent. of the area of the lot, if an interior lot, or 40 per cent. if a corner lot. In computing such percentage any part of the area of any corner lot in excess of 8,000 square feet shall be considered an interior lot.

(d) In an E district no portion of any building shall be erected nearer than 10 feet to the line of any street as laid out upon the City map.

§ 16. *F Districts.* (a) In an F district no portion of any building shall be erected nearer than 15 feet to the building line of any street.

(b) In an F district a rear yard at any given height shall be at least six inches in least dimension for each one foot of such height. The depth of a rear yard at its lowest level shall be at least 20 per cent. of the depth of the lot, but need not exceed 20 feet at such level. Excepting that if a building in an F district is located in a residence district as designated on the amended use district map, the depth of a rear yard at its lowest level shall be at least 30 per cent. of the depth of the lot, but need not exceed 30 feet at such level. However, for each one foot in excess of 15 feet of the depth of such rear yard at its lowest level there may be substituted one foot of additional depth of unoccupied space to that hereinbefore provided across the whole width of the front of the lot at the curb level between the street line and the street wall of the building. In an F district, on both sides of every dwelling there shall be a side yard along the side lot line for the full depth of the lot or back to the rear yard. For every residential building located in a residence district both sides of such building shall be capable of being afforded direct light, air and access upon such side yards, for its entire length.

(c) In an F district an outer court or side yard at any given height shall be at least three inches in least dimension for each one foot of such height, excepting that on a lot not more than 50 feet in mean width an outer court or a side yard at any given height shall be at least two and one-half inches in least dimension for each one foot of such height. An outer court at any given point shall be at least three inches in least dimension for each one foot of length.

(d) In an F district no building shall occupy at the curb level more than 35 per cent. of the area of the lot, if an interior lot, or 50 per cent. if a corner lot, and above a level 18 feet above the curb no building shall occupy more than 25

per cent. of the area of the lot, if an interior lot, or 30 per cent. if a corner lot, exclusive in each case of garages. In computing such percentage any part of the area of any corner lot in excess of 6,000 square feet shall be considered an interior lot.

§ 17. *Rear Yards.* (a) Except in A districts, for lots or portions of lots that are back to back there shall be rear yards extending along the rear lot lines of such lots or portions of lots wherever they are more than 55 feet back from the nearest street. Such rear yard shall be at least of the area and dimensions herein prescribed for the area district in which it is located at every point along such rear lot line. Within 55 feet of the nearest street no rear yards shall be required, except in F area districts. No rear yard shall be required on any corner lot nor, excepting in an F area district, on the portion of any lot that is back to back with a corner lot.

(b) Where a building is not within a residence district as designated on the amended use district map, the lowest level of a rear yard shall not be above the sill level of the second story windows, nor in any case more than 23 feet above the curb level. Where a building is within a residence district the lowest level of a rear yard shall not be above the curb level, except that not more than 40 per cent. of the area of the yard may be occupied by the building up to a level 18 feet above the curb level. In the case of a church, whether within or without a residence district, such 40 per cent. may be occupied up to a level of 30 feet above the curb level.

(c) Chimneys or flues may be erected within a rear yard provided they do not exceed five square feet in area in the aggregate and do not obstruct ventilation.

(d) Except in A districts, where a building on an interior lot between lots for which rear yards are required runs through the block from street to street or to within 55 feet of another street, there shall be on each side lot line above the sill level of the second story windows and in any case above a level 23 feet above the curb level a court of at least equivalent area at any given height to that required for an inner court at such height and having a least dimension not less than that required for an outer court at the same height.

(e) When a proposed building is on a lot which is back to back with a lot or lots on which there is a building or buildings having rear yards less in depth than would be required under this article, the depth of the rear yard of the proposed building shall not be required to be greater at any given level than the average depth of the rear yards directly back to back with it at such level, but in no case shall the depth of such rear yard be less at any height than the least dimension prescribed for an outer court at such height.

§ 18. *Courts.* (a) If a room in which persons live, sleep, work or congregate receives its light and air in whole or in part directly from an open space on the same lot with the building, there shall be at least one inner court, outer court, side yard or rear yard upon which a window or ventilating skylight opens from such room. Such inner court, outer court or side yard shall be at least of the area and dimensions herein prescribed for the area district in which it is located. Such rear yard shall be at least of the area and dimensions herein prescribed for an inner court in the area district in which it is located. In an A district, such inner court, outer court, side yard or rear yard shall be at least of the area and dimensions herein prescribed for a court in such district. The unoccupied space within the lot in front of every part of such window shall be not less than three feet, measured at right angles thereto. Courts, yards and other open spaces, if provided in addition to those required by this section, need not be of the area and dimensions herein prescribed. The provisions of this section shall not be deemed to apply to courts or shafts for bathrooms, toilet compartments, hallways or stairways.

(b) The least dimension of an outer court, inner court or side yard at its lowest level shall be not less than four feet, subject to the following exceptions:

(1) Where the walls bounding a side yard within the lot are more than 25 feet in mean height and not more than 40

NOTICE

feet in length such least dimension may be not less than three feet.

(2) In an E district such least dimension shall be four feet.

(3) In an F district such least dimension shall be five feet.

(4) Where any outer court opens on a street such street may be considered as part of such court.

(c) The least dimension of an inner court at any given height shall be not less than that which would be required in inches for each one foot of height for a rear yard of the same height, except that an inner court of equivalent area may be substituted for said court, provided that for such area its least dimension be not less than one-half of its greatest dimension. If an inner court is connected with a street by a side yard, for each one foot that such side yard is less than 65 feet in depth from the street, one square foot may be deducted from the required area of the inner court for each 15 feet of height of such court. If the lot is not required under this resolution to have a rear yard, an outer court, not opening on a street, shall open at any level on an inner court on the rear line of the lot and such inner court shall be deemed a rear yard in such case.

§ 19. *Area District Exceptions.* (a) The area required in a court or yard at any given level shall be open from such level to the sky unobstructed, except for the ordinary projections of skylights and parapets above the bottom of such court or yard, and except for the ordinary projections of window sills, belt courses, cornices and other ornamental features to the extent of not more than four inches. However, where a side yard or an outer court opens on a street a cornice may project not over five feet into such side yard or outer court within five feet of the street wall of the building. And provided that in an E district a one-family residence, detached on all sides and having on one side a side yard of a clear and unobstructed width of not less than five feet, may have a cornice or eave projecting not more than 2 feet 6 inches into a side yard on the opposite side, with the further provision that in an F district such cornice or eave, or a porte-cochere having a height of less than 18 feet, may project not more than 3 feet into both side yards.

(b) An open or lattice enclosed iron fire escape, fireproof outside stairway or solid-floored balcony to a fire tower may project not more than 4 feet into a rear yard or an inner court, except that an open or lattice enclosed iron fire escape may project not more than 8 feet into a rear yard or into an inner court when it does not occupy more than 20 per cent. of the area of such inner court.

(c) A corner of a court or yard may be cut off between walls of the same building provided that the length of the wall of such cut-off does not exceed 7 feet.

(d) An offset to a court or yard may be considered as a part of such court or yard provided that it is no deeper in any part than it is wide on the open side and that such open side be in no case less than 6 feet wide.

(e) If a building is erected on the same lot with another building the several buildings shall, for the purpose of this article, be considered as a single building, unless otherwise herein specifically provided for. Any structure, whether independent of or attached to a building, shall for the purposes of this article be deemed a building or a part of a building.

(f) If an additional story or stories are added to a building existing at the time of the passage of this resolution, the courts and yards of which do not conform to the requirements of this article, the least dimensions of yards and courts shall be increased from the top of the existing yard or court walls, as though they were of the prescribed dimensions at such heights and the carrying up of existing elevator and stair enclosures shall be exempted from the provisions of this article.

Article V—General and Administrative.

§ 20. *Interpretation; Purpose.* In interpreting and applying the provisions of this resolution, they shall be held to be the minimum requirements adopted for the promotion of the public health, safety, comfort, convenience and general wel-

fare. It is not intended by this resolution to repeal, abrogate, annul or in any way to impair or interfere with any existing provision of law or ordinance or any rules, regulations or permits previously adopted or issued or which shall be adopted or issued pursuant to law relating to the use of buildings or premises; nor is it intended by this resolution to interfere with or abrogate or annul any easements, covenants or other agreements between parties; provided, however, that where this resolution imposes a greater restriction upon the use of buildings or premises or upon height of buildings or requires larger yards, courts or other open spaces than are imposed or required by such existing provision of law or ordinance or by such rules, regulations or permits or by such easements, covenants or agreements, the provisions of this resolution shall control.

§ 21. *Rules and Regulations; Modifications of Provisions.* The Board of Standards and Appeals, created by chapter 503 of the Laws of 1916, shall adopt from time to time such rules and regulations as they may deem necessary to carry into effect the provisions of this resolution. Where there are practical difficulties or unnecessary hardships in the way of carrying out the strict letter of the provisions of this resolution the Board of Appeals shall have power in a specific case to vary any such provision in harmony with its general purpose and intent, so that the public health, safety and general welfare may be secured and substantial justice done. Where the street layout actually on the ground varies from the street layout as shown on the amended use, height or area district map, the designation shown on the mapped areas shall be applied by the Board of Appeals to the unmapped streets in such a way as to carry out the intent and purpose of the plan for the particular section in question. Before taking any action authorized in this section the Board of Appeals shall give public notice and hearing.

No garage for more than five cars may be erected or extended and no building not now used as a garage for more than five cars may have its use changed to a garage for more than five cars on any portion of a street between two intersecting streets, in which portion there exists an exit from or an entrance to a public school; or in which portion there exists any hospital maintained as a charitable institution; and in no case within a distance of 200 feet from the nearest exit from or entrance to a public school; nor within 200 feet of any hospital maintained as a charitable institution. This protection shall also apply to duly organized schools for children under 16 years of age, giving regular instruction at least five days a week for eight months or more each year, owned and operated by any established religious body or educational corporation. This limitation on the location of garages shall apply to unrestricted as well as business and residence districts.

No gasoline service station may be erected or extended on any portion of a street between two intersecting streets, in which portion there exists an exit from or an entrance to a public school; and in no case within a distance of 200 ft. from the nearest exit from or entrance to a public school. This protection shall also apply to duly organized schools for children under 16 years of age, giving regular instruction at least five days a week for eight months or more each year, owned and operated by any established religious body or educational corporation.

§ 22. *Unlawful Use; Certificate of Occupancy.* It shall be unlawful to use or permit the use of any building or premises or part thereof hereafter created, erected, changed or converted wholly or partly in its use or structure until a certificate of occupancy to the effect that the building or premises or the part thereof so created, erected, changed or converted and the proposed use thereof conform to the provisions of this resolution shall have been issued by the superintendent of buildings of the borough in which such building or premises is located, or, in the case of a tenement house as defined in the Tenement House Law, by the tenement house commissioner. In the case of such buildings or premises it shall be the duty of the superintendent of buildings or the tenement house commissioner, as the case may

NOTICE

be, to issue a certificate of occupancy within ten days after a request for the same shall be filed in his office by any owner of a building or premises affected by this resolution, provided said building or premises, or the part thereof so created, erected, changed or converted and the proposed use thereof conform with all the requirements herein set forth. Under rules and regulations of the Board of Standards and Appeals a temporary certificate of occupancy for a part of a building may be issued by the superintendent of buildings or the tenement house commissioner, as the case may be. Upon written request from the owner, the superintendent of buildings or the tenement house commissioner, as the case may be, shall issue a certificate of occupancy for any building or premises existing at the time of the passage of this resolution certifying after inspection the use of the building or premises and whether such use conforms to the provisions of this resolution.

§ 23. *Enforcement, Legal Procedure, Penalties.* This resolution shall be enforced by the tenement house commissioner and by the superintendent of buildings in each borough, under the rules and regulations of the Board of Standards and Appeals.

The tenement house commissioner shall enforce said regulations in so far as they affect or relate to tenement houses as defined by the tenement house law. The superintendent of buildings shall in each borough enforce said regulations in so far as they relate to buildings or premises other than tenement houses. Each of said officers within his jurisdiction is empowered to cause any building, structure, place or premises to be inspected and examined and to order in writing the remedying of any condition found to exist therein or thereat in violation of any provision of the building zone resolution adopted by the board of estimate and apportionment on the twenty-fifth day of July, nineteen hundred and sixteen, and as subsequently amended. Such order may be served in the same manner as provided in section seven hundred and seventy-five of the Greater New York Charter for the service of orders by the fire commissioner.

The owner or general agent of a building or premises where a violation of any provision of said building zone resolution has been committed or shall exist, or the lessee or tenant of an entire building or entire premises where such violation has been committed or shall exist or the owner, general agent, lessee or tenant of any part of the building or premises in which such violation has been committed or shall exist or the general agent, architect, builder, contractor, or any other person who commits, takes part or assists in any such violation or who maintains any building or premises or any part thereof in which any violation shall exist shall be guilty of a misdemeanor.

Any such person who having been served with an order

to remove any such violation shall fail to comply with said order within ten days after such service or shall continue to violate any provision of the said building zone resolution in the respect named in such order shall be guilty of a misdemeanor.

In addition to the foregoing remedies the City of New York by the Corporation Counsel may maintain an action for an injunction to restrain any violation of the said building zone resolution.

§ 24. *Amendments, Alterations and Changes in District Lines.* The Board of Estimate and Apportionment may from time to time on its own motion or on petition, after public notice and hearing, amend, supplement or change regulations and districts herein established. Whenever owners of 50 per cent. or more of the frontage in any district or part thereof shall present a petition duly signed and acknowledged to the Board of Estimate and Apportionment requesting an amendment, supplement, change or repeal of the regulations prescribed for such district or part thereof it shall be the duty of the Board to vote upon said petition within 90 days after the filing of the same by the petitioner with the secretary of the Board. If, however, a petition against such amendment, supplement or change be presented duly signed and acknowledged by the owners of 20 per cent. or more of any frontage proposed to be altered, or by the owners of 20 per cent. of the frontage immediately in the rear thereof, or by the owners of 20 per cent. of the frontage directly opposite the frontage proposed to be altered, such amendment shall not be passed except by the unanimous vote of the Board. If any area is hereafter transferred to another district by a change in district boundaries by amendment, as above provided, the provisions of this resolution in regard to buildings or premises existing at the time of the passage of this resolution shall apply to buildings or premises existing at the time of passage of such amendment in such transferred area.

§ 25. *Restoration of Existing Buildings.* Nothing in this resolution shall prevent the restoration of a building wholly or partly destroyed by fire, explosion, act of God or act of the public enemy or prevent the continuance of the use of such building or part thereof as such use existed at the time of such destruction of such building or part thereof or prevent a change of such existing use under the limitations provided in section 6. Nothing in this resolution shall prevent the restoration of a wall declared unsafe by the superintendent of buildings or by a board of survey.

§ 26. *When Effective.* The zoning resolution of July 1, 1916, and all amendments thereto are hereby declared superseded by this resolution, which shall take effect immediately.

NOTICE

APPENDIX—MAP DESIGNATIONS AND MAP DESIGNATION RULES ACCOMPANYING AMENDED BUILDING ZONE RESOLUTION.

(Adopted October 3, 1924)

AMENDED HEIGHT DISTRICT MAP DESIGNATIONS.

———— indicates the boundary of a Height District.

($\frac{1}{4}$) ($\frac{1}{2}$) ($\frac{3}{4}$) (1) ($1\frac{1}{4}$) ($1\frac{1}{2}$) (2) ($2\frac{1}{2}$) are symbols for district classifications as defined in the zoning resolution.

AMENDED HEIGHT DISTRICT MAP DESIGNATION RULES.

1. An area surrounded by a district boundary line shall be in the Height District designated therein, except as otherwise provided by these rules.

2. The boundaries of Height Districts shall be the limiting line to which the regulations provided in any given district may be availed of.

3. The precise location of a boundary line is to be interpreted as follows:

(a) In cases where the district boundary is within a block and extends along the direction of the length thereof and no fixtures are shown, said boundary shall be deemed located 100 feet from the bounding street lying within the less restrictive district,

(b) In cases where the district boundary is within a block and extends along the direction of the width thereof and fixtures are shown, said boundary shall be deemed located 100 feet from the nearest street.

(c) In cases where the boundary line is shown as being located a specific distance from a street line, this distance shall control.

(d) In cases where the boundary line is given a position within a street, it shall be deemed to be in the center of the street.

(e) In cases where a boundary line is shown along a railroad, such boundary shall be deemed to be the center line of the railroad right of way.

(f) In cases of navigable waters, the boundary line, unless otherwise fixed, shall be deemed to coincide with the pierhead line, except in cases where no pierhead line has been established, when the shore line shall govern.

(g) Any island outside of the shore or pierhead line, unless otherwise designated, shall be deemed to be in the $1\frac{1}{2}$ -times height district.

NOTICE

AMENDED AREA DISTRICT MAP DESIGNATIONS.

— — — — — indicates the boundary of an Area District.

(B) (C) (D) (E) (F) are symbols for district classifications as defined in the zoning resolution.

AMENDED AREA DISTRICT MAP DESIGNATION RULES.

An area surrounded by a district boundary line shall be the Area District designated therein, except as otherwise provided by these rules.

The boundaries of Area Districts shall be the limiting to which the regulations provided in any given district be availed of.

The precise location of a boundary line is to be interpreted as follows:

(a) In cases where the district boundary is within a block and extends along the direction of the length thereof and no fixtures are shown, said boundary shall be deemed located 100 feet from the bounding street lying within the less restrictive district.

(b) In cases where the district boundary is within a block and extends along the direction of the width thereof and no fixtures are shown, said boundary shall be deemed located 100 feet from the nearest street.

(c) In cases where the boundary line is shown as being located a specific distance from a street line, this distance shall control.

(d) In cases where the boundary line is given a position within a street, it shall be deemed to be in the center of the street.

(e) In cases where a boundary line is shown as adjoining a railroad, unless otherwise fixed, it shall be deemed to coincide with the boundary line of the railroad right of way.

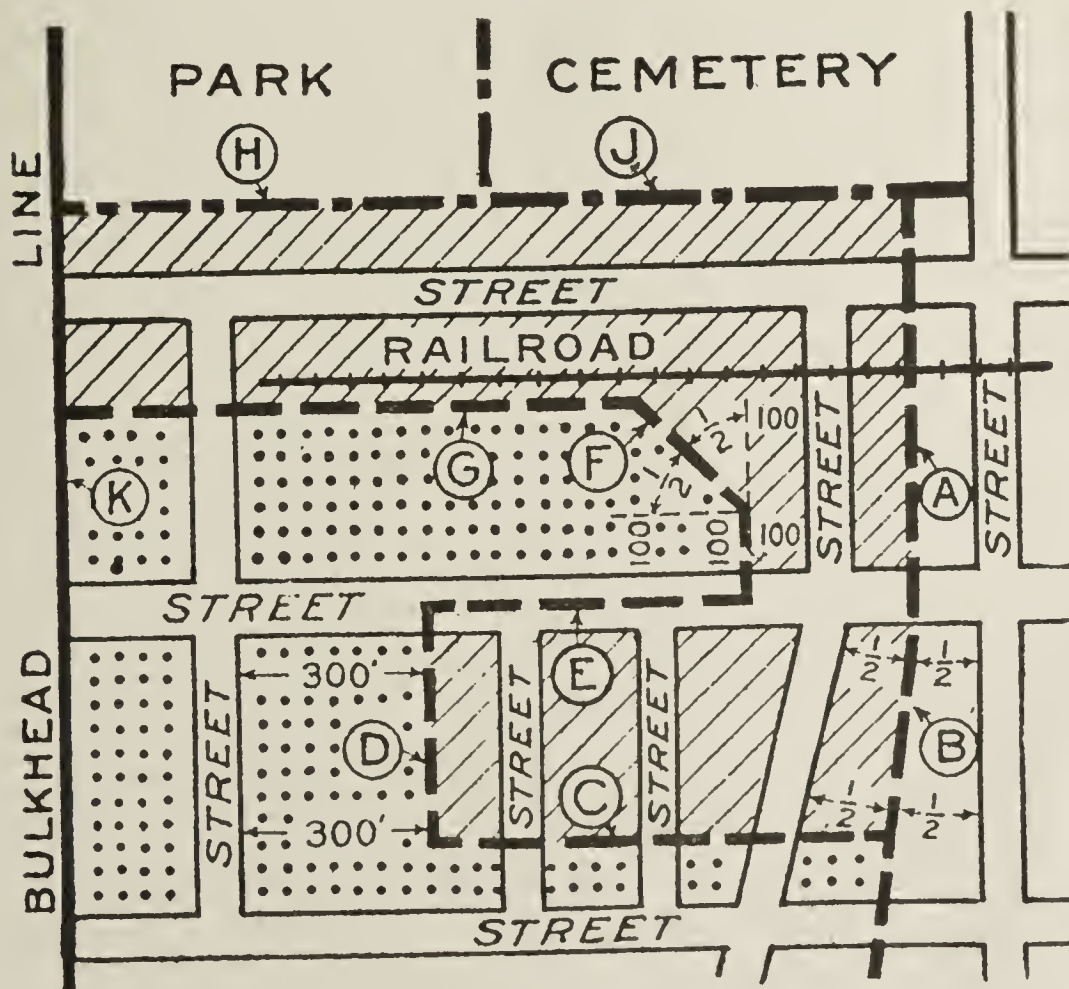

(f) In cases of navigable waters the boundary line, unless otherwise fixed, shall be deemed to coincide with the bulkhead line, except in cases where no bulkhead line has been established, when the shore line shall govern.

(g) Any island outside of the shore or bulkhead lines, unless otherwise designated, shall be deemed to be in an A district.

AMENDED USE DISTRICT MAP DESIGNATIONS.

— — — — — indicates the boundary of a Use District.
□ indicates Residence District.
▨ indicates Business District.
▤ indicates Unrestricted District.
UNDETERMINED indicates Undetermined District for which no restrictions or regulations as to use have been established.

Diagram Illustrating Methods Used in Fixing Boundaries of Use Districts.

AMENDED USE DISTRICT MAP DESIGNATION RULES.

1. In general Use Districts are intended to have a depth 100 feet. Where block widths are less than 200 feet and

no fixtures are shown, the district boundary is intended to be 100 feet from the street to which the less restrictive designation relates.

NOTICE

2. The boundaries of Use Districts shall be the limiting line to which uses permissible in any given district may be availed of.

3. The precise location of a boundary line is to be interpreted as follows:

(a) In case of parallel streets, unless otherwise fixed, the Use District boundary shall coincide with the center line of the block.

(b) In case of streets which are not parallel, the Use District boundary, unless otherwise fixed, shall be construed as the bisector of the angle formed by prolonging the street lines to an intersection.

(c) In cases where a block has a length in excess of 200 feet and the boundary line is parallel with and nearer one of the bounding streets, unless otherwise fixed, its position shall be considered as distant 100 feet from the nearest street.

(d) In cases where the boundary line is shown as being located a specific distance from a street line, this distance shall control.

(e) In cases where the boundary line is given a position within a street, it shall be deemed to be in the center of the street.

(f) In cases where a boundary line is shown as having a position oblique to the streets bounding the block in which it is located, unless otherwise fixed, it shall be deemed to be the bisector of the angle formed by intersecting lines 100 feet from and parallel with the bounding streets, the said distance being measured at right angles or normal to the street lines.

(g) In cases where a boundary line is shown as adjoining a railroad, unless otherwise fixed, it shall be deemed to coincide with the boundary line of the railroad right of way.

(h-j-k) In cases of parks, cemeteries and navigable waters, the boundary line, unless otherwise fixed, shall be deemed to coincide with the boundary of the park, or the cemetery, or the bulkhead line, except in cases where no bulkhead line has been established, when the shore line shall govern.

4. Where two streets cross at different levels, the use designation of the lower street shall control, except that when the use designation of the lower street is less restrictive it shall control only to the curb level of the higher street. Above the curb level of the higher street the more restrictive designation shall apply for a distance of 100 feet measured along the intersecting streets from each street corner.

Cases listed in the Reserve Calendar are cases upon which action by the board has been deferred pending committee reports, of this board, court or department actions, and will remain thereon until the aforesaid reports, court or departmental actions are consummated. Whereupon the case or cases will be restored to the regular calendar and due notice of the date set for hearing will be mailed to the appellant, applicant or petitioner of record.

FORMS FOR NOTICES TO PROPERTY OWNERS

If applicants, under the building zone resolution, desire copies of Form 13A, for notices to property owners, such forms are not to be supplied by this office.

The applicant is entitled only to one copy of Form 13A, properly filled out.

If he desires additional copies for his own convenience in notifying property owners, he can obtain such copies from The O'Connell Press, 176 Park Row, Manhattan, at three cents each, postage to be added if the forms are to be supplied by mail.

RULES

(Continued from page 791)
by the columns immediately above and below the floor line under consideration in direct proportion to the values of their ratios of I/h .

E. Wall Columns shall be designed to resist bending in the same manner as interior columns, except that W shall be substituted for W_1 in the formula for the moment. The moment so computed may be reduced by the counter moment of the weight of the structure which projects beyond the center line of the wall columns.

F. Roof Columns shall be designed to resist the total moment resulting from unequally loaded panels, as expressed by the formulae in paragraphs (D) and (E) of this rule.

Rule 13. Walls and Openings. In the design and construction of reinforced concrete flat slabs, additional

slab thickness, girders or beams shall be provided to carry any walls or concentrated loads in addition to the specified uniform live and dead loads. Such girders or beams shall be assumed to carry twenty (20) per cent of the total live and dead panel load in addition to the wall load. Beams shall also be provided in case openings in the floor reduce the working strength of the slab below the prescribed carrying capacity.

Rule 14. Special Panels. For structures having a width of less than three (3) rows of slabs, or in which exterior drops, capitals or columns are omitted, or in which irregular or special panels are used, and for which the rules relating to the design of reinforced flat slabs do not directly apply, the computations in the analysis of the design of such panels, shall, when so required, be filed with the superintendent of buildings.

Any person desiring to consult the chairman or the engineers, pertaining to the work of either board, will be seen only between the hours of ten in the morning and one in the afternoon—Saturdays excepted.

CALL OF CLERK'S CALENDAR.

The Clerk's Calendar consists of applications under the Building Zone Resolution, and its object is to give interested property owners opportunity to file objections, if any, and will be called in Room 1013, Tuesday, July 21, 1925, at 2 o'clock. At this call each case is set for hearing on a definite day.

The next subsequent Call of the Calendar will be on Tuesday, July 28, 1925, at 2 o'clock.

The Clerk's Calendar is not to be confused with the calendar of cases that have been definitely set for hearing on fixed days.

NOTICE TO APPELLANTS AND PETITIONERS.

No appeal, application or petition will be entertained in connection with which court proceedings are pending or in progress, nor accepted that are not filed within twenty days from the date of the action of the Administrative Official.

Any communication purporting to be an appeal, application or petition shall be regarded as a mere notice of intention to seek relief until it is filed on the form required by the rules of this board.

Upon receipt of any such communication the writer will be supplied with the official forms for presenting his appeal, application or petition, and if he fails to supply the data required thereon, within twenty days, his case may be dismissed for lack of prosecution.

At the time of filing an application, the appellant or petitioner shall forward a signed notice of appeal addressed to the administrative official (either superintendent of buildings or fire commissioner) and file with this board a duplicate of said notice.

Petitioners are advised that their plans must indicate the points of the compass so as to establish the true location and position of the property, the subject of the appeal.

Appeals, applications and petitions will be simplified and expedited by conforming to these directions.

WILLIAM E. WALSH, Chairman.

THE RESOLUTION:
(373-25-A)

WHEREAS, James W. Byrnes, for William Henne Co., Inc., owner, filed, April 6, 1925, an appeal, with the board of appeals, from orders of the fire commissioner, affecting premises 957-971 Kent avenue (rear), Brooklyn; and
WHEREAS, the orders of the fire commissioner, dated February 13, 1925, read:

"No. 71340-F:

"1. Provide iron shutters at all openings in the exterior wall above 1st story which are distant in direct line less than 30 ft. from any opening in another building and not in the same plane with said openings and which are not more than 50 ft. above neighboring roof at north side of building No. 1, and the north east and south sides of building No. 2 or other approved protection, as per Sec. 375, Article 18 Chapter 5 of the Code of Ordinances."

"No. 71341-F:

"1. Provide an approved gas shut-off valve, installed arranged and equipped as provided for in the Rule of the Board of Standards and Appeals, adopted January 11th, 1924. Said valve to be attached to the gas supply pipes on the inside of the building at a point where said pipes enter the building and before they reach the gas meters, which valve shall shut off the gas automatically when subjected to direct contact with fire and shall also be connected with a conspicuous and conveniently accessible control box at a place on the exterior of the building so arranged as to allow the gas supply to be shut off by the officers of the Fire Department immediately, whenever the necessity arises. Section 20a, Chapter 12, Code of Ordinances.";

and

WHEREAS, the premises consists of a plot of ground upon which are located two non-fireproof four-story buildings—No. 1 and No. 2—which constitutes part of the plant of the Wm. Henne & Co. shoe factory; building No. 1 being 132 ft. by 50 ft. in area and building No. 2 being 61 ft. by 69 ft. in area; there being 125 persons above the 1st story in building No. 1 and 145 persons above the 1st story in building No. 2; and

WHEREAS, there are six openings on each story above the 1st story in the northerly wall of building No. 1 and also six openings on each story above the 1st story in the northerly wall of building No. 2 within 50 ft. of the roof of a one-story garage to the north; 13 openings in the easterly wall of building No. 2, on each story above the 1st story within 30 ft. of or within 50 ft. of the roof of a one-story building to the east and six openings in the southerly wall of building No. 2, on each story above the 1st story within 30 ft. of or within 50 ft. of the roof of a work shed to the south; and

WHEREAS, appellant proposes to install fireproof windows at all openings in the northerly wall, second story of buildings No. 1 and No. 2, and contends that the responsibility for installing the gas shut-off lies with the gas company.

Resolved, that the order of the fire commissioner, No. 71340, Item 1, be and it hereby is *modified*, and the appeal be and it hereby is *granted*, only so far as it affects the windows in the easterly, westerly and southerly walls; and that Order No. 71341, Item 1, be and it hereby is *affirmed* and the appeal be and it hereby is *denied*.

MINUTES

95-25-A.
APPELLANT—Croker National Fire Prevention Engineering Co., for Brooklyn Box & Lumber Co., Inc., lessee.

SUBJECT—Appeal from orders of fire commissioner.
REMISES AFFECTED—216-224 Seigel street, Brooklyn.

APPEARANCES—
For Appellant: Herman E. Horwood.
For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Appeal denied.

THE VOTE TO GRANT—
Affirmative: Chairman Walsh, Messrs. Holland and Connell 3
Negative: Messrs. Kennedy, Dowd, Gunnison and Fire Chief Kenlon 4
Absent 0

THE RESOLUTION:

(95-25-A)

WHEREAS, Croker National Fire Prevention Engineering Company, for Brooklyn Box & Lumber Co., Inc., lessee, filed, January 23, 1925, an appeal, with the board of appeals, from orders of the fire commissioner, affecting premises 216-224 Seigel street, Brooklyn; and

WHEREAS, the orders of the fire commissioner, dated November 25, 1924, read:

"Order No. 68139-F.

"1. Install a standpipe system with risers 4 in. in diameter tested to withstand a pressure of 300 lbs. per square inch, extending from cellar to roof, with necessary check valves and 2½ inch regulation Fire Department outlets on each story (including basements, cellars and roofs) placed within main stairway enclosure. Each outlet to be provided with sufficient feet of 2½ inch standard hose attached thereto.

"Such standpipe shall be kept constantly filled with water by means of an approved tank or pump supply and be ready for use at all times. Standpipe to be connected with two-way, 3 inch siamese connection with double clapper valves and cap and signs, placed on street front of building at least 18 inches and not more than two feet above the sidewalk in a horizontal position, accessible to the Fire Department."

"Order No. 68140-F:

"1. Provide a separate and distinct system of Automatic Sprinklers throughout building having at least one source of water supply, arranged and equipped as provided in the rules for fire extinguishing appliances adopted by the Board of Standards and Appeals May 24, 1917, as amended May 2, 1918, and January 21, 1919, effective February 17, 1919."

and
WHEREAS, the buildings are of frame construction, consisting of three attached buildings and lumber shed with connecting doorways; two and three stories in height, 148 ft. 11 in. by 100 ft. irregular, approximately 11,978 sq. ft. first floor area. OCCUPIED: 1st story, storage of woolen rags and lumber, 11 persons; 2nd and 3rd stories, manufacturing boxes, 14 persons; and

WHEREAS, the appellant proposes to provide chemical fire extinguishers, water casks and buckets sufficient to protect entire area, and in view of the small occupancy and the slight excess in area over 10,000 sq. ft., he requests the board to be relieved of the standpipe and sprinkler orders.

Resolved, that the orders of the fire commissioner be and they hereby are affirmed, and the appeal be and it hereby is denied.

130-25-A.

APPELLANT—Gulf Refining Company, lessee.
SUBJECT—Appeal from decision of fire commissioner.
PREMISES AFFECTED—Southwest corner of Maspeth avenue and Gardner avenue, Brooklyn.

APPEARANCES—

For Appellant: Daniel D. O'Sullivan and E. H. Gibson.

For Administration: Inspector Carroll of fire department.

ACTION OF BOARD—Appeal granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison, Holland, Connell and Fire Chief Kenlon 7
Negative 0
Absent 0

THE RESOLUTION:

(130-25-A)

WHEREAS, Gulf Refining Company, lessee, filed, January 30, 1925, an appeal, with the board of appeals, from a decision of the fire commissioner, affecting premises south side of Maspeth avenue, corner of Gardner avenue, Brooklyn; and

WHEREAS, the decision of the fire commissioner, rendered September 10, 1925, in acting on Alteration Application No. 1405-23, reads:

"6. Filling tanks should be buried.";

and

WHEREAS, the premises consist of a plot of ground, 130 ft. by 410 ft. in area, on which is located the plant of the Gulf Refining Company, consisting of fifteen (15) 19,500 gallon capacity tanks, 3 filling tanks, a warehouse, garage, stable and other buildings and sheds; the storage tanks are located in a concrete enclosure, partially buried beneath the ground, extending 3 ft. 6 in. above the ground, covered over on the top with earth; the filling tanks are located on a concrete platform 9 ft. above the yard level and are approximately 4,200 gallons capacity each; and

WHEREAS, appellant contends that the rules of the board of hazardous trades permit filling tanks of not more than 4,200 gallons capacity, that it is proposed to use the filling tanks to replace the existing system of filling by compressed air from underground storage tanks, that the filling of drums by gravity is the usual method and that the hazard is decreased because there is no possibility of excessive pressure.

Resolved, that the decision of the fire commissioner be and it hereby is modified, and the appeal be and it hereby is granted on condition that not more than one battery of three (3) filling tanks shall be maintained on premises, the capacity of any one tanks not to exceed 4,200 gallons, supported on a concrete superstructure with a reservoir of not less than 12-inch depth and a capacity of 1½ times the capacity of any individual tank; and that the plant throughout otherwise shall conform with the requirements in all other respects.

THE RESOLUTION:

(385-25-A)

WHEREAS, H. G. Vogel Company, for International Motor Company, owner, filed, April 9, 1925, an appeal, with the board of appeals, from a decision of the fire commissioner, affecting premises north side of Anable avenue, from Honeywell street to Moore street, Long Island City, Borough of Queens; and

WHEREAS, the decision of the fire commissioner, rendered March 24, 1925, reads:

"7. The total number of sprinkler heads requires a greater supply than 50,000 gallons of water (gravity tank) and a larger size connection than 8 in. to the city main. The amount of water in gravity tank and the size of connection to the main will have to be determined by the Board of Appeals. Appeal must be made to that Board."

and

WHEREAS, the building is fireproof, three stories and basement in height, 200 ft. by 425 ft. in area; the area of the basement, 1st and 2nd stories being subdivided by fireproof walls and fire-resisting partitions. OCCUPIED: Basement, stock and boiler room; 1st story, forge shop for auto parts; 2nd story, auto body building; 3rd story, offices; EQUIPPED with a sprinkler system having 937 sprinkler heads on the basement story; 963 heads on the 1st story; 990 heads on the 2nd story and 244 sprinkler heads on the 3rd story, a total of 3,134 sprinkler heads; supplied by a 50,000 gallon gravity tank (located 25 ft. above the roof) from the 12 in. city main through an 8 in. connection and also from five 3 in. by 3 in. by 6 in. fire department connections; and

WHEREAS, appellant contends that the existing water supply for the sprinkler system is adequate in view of the construction and occupancy of the premises.

Resolved, that the decision of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted on condition* that a gravity tank of not less than 50,000 gallon capacity shall be maintained and that the sprinkler installation shall comply with rules in all other respects. All necessary permits required by the building code to be obtained.

THE RESOLUTION:

(441-25-A)

WHEREAS, Gertrude S. Cook and Alice M. Millin, lessees filed, April 24, 1925, an appeal, with the board of appeals from a decision of the superintendent of buildings, affecting premises 9502 121st street, Borough of Queens; and

WHEREAS, the decision of the superintendent of buildings, rendered April 2, 1925, reads:

"Replying to your request for a certificate of occupancy to occupy the building located on the southwest corner 121st St. and 95th Ave., Richmond Hill, I would say that I regret that I am unable to issue this certificate for the reason that Sec. 72 of the Building Code of the City of New York requires that a building which is to be used as a sanitarium must be of fireproof construction."

and

WHEREAS, the building is frame, two stories and attic in height, 46 ft. by 26 ft. in area. Proposed OCCUPANCY: Sanitarium, 6 patients on the 1st story and 8 patients on the 2nd story; and

WHEREAS, appellant contends that the building is amply provided with exits; that the house is detached and the fire hazard from surrounding buildings thereby greatly lessened, and contends further that the patients will be in rooms located less than 20 ft. above the ground.

Resolved, that the decision of the superintendent of buildings be and it hereby is *modified*, and the appeal be and it hereby is *granted on condition* that the occupancy for medical care and treatment conducted on the premises shall be restricted to first two stories; and that the care and treatment and conduct of all surgical cases and patients on these premises shall be restricted to 1st story.

THE RESOLUTION:

(254-25-A)

WHEREAS, Varick Realty Company, owner, filed, March 6, 1925, an appeal, with the board of appeals, from an order of the fire commissioner, affecting premises 398-408 Washington street, Manhattan; and

WHEREAS, the order of the fire commissioner, dated February 13, 1925, reads: :

"Order No. 71570-F:

"1. Provide an approved gas shut-off valve, installed, arranged and equipped as provided for in the Rules of the Board of Standards and Appeals, adopted January 11th, 1924. Said valve to be attached to the gas supply pipes on the inside of the building at a point where said pipes enter the building and before they reach the gas meters, which valve shall shut off the gas automatically when subjected to direct contact with fire and shall also be connected with a conspicuous and conveniently accessible control box at a place on the exterior of the building so arranged as to allow the gas supply to be shut off by the officers of the Fire Department immediately, whenever the necessity arises. Section 20a, chapter 12, Code of Ordinances."

and WHEREAS, the building is fireproof, eleven stories in height,

MINUTES

aving a frontage of 229 ft. on Hubert street, 115 ft. on West street and 115 ft. on Washington street; OCCUPIED, tenant actory, 500 persons above the 1st story; and

WHEREAS, appellant contends that the gas used in the building is for the purpose of illumination and also for industrial purposes, and contends, generally, that the fire commissioner has no authority to make or serve the order.

Resolved, that the order of the fire commissioner be and it hereby is *affirmed*, and the appeal be and it hereby is *denied*.

APPELLANT—David M. Jones, for Philip Wald and S. Buchman, owner.

SUBJECT—Appeal from order of fire commissioner.

PREMISES AFFECTED—1342 Park avenue, Manhattan.

APPEARANCES—

For Appellant: Stewart Browne.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Appeal dismissed for lack of prosecution, without prejudice to any steps applicant proposes to take for the determination of the question now pending in the courts.

THE VOTE TO DISMISS FOR LACK OF PROSECUTION—

Affirmative. Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison, Holland, Connell and Fire Chief Kenlon	7
Negative	0
Absent	0

THE RESOLUTION:

(16-24-A)

WHEREAS, David M. Jones, for Philip Wald and S. Buchman, owners, filed, January 5, 1924, an appeal, with the board of appeals, from orders of the fire commissioner, affecting premises 1342 Park avenue, Borough of Manhattan; and

WHEREAS, the orders of the fire commissioner, dated December 17, 1923, read:

"No. 52910:

"1. Provide the following means of preventing the spread of fire:

"Provide an approved automatic closed circuit fire alarm system with a connection to Fire Department Headquarters.

"2. Provide a separate and distinct system of *Automatic Sprinklers* in cellar, dumbwaiter shafts and all stairhalls having at least one source of water supply."

"No. 52911-F:

"1. Provide fireproof doors, windows and transoms for all openings leading to the stair enclosure.

"2. Provide fireproof windows on the course of fire escape on all stories.";

nd

WHEREAS, the building is non-fireproof, five stories in eight, 25 ft. by 60 ft. in area; OCCUPIED on 1st story s stores and dwellings above, 40 persons above 1st story; nd

WHEREAS, appellant contends the building is a tenement, nd, as such, the fire commissioner has no jurisdiction or uthority to issue the orders regarding same; and

WHEREAS, no one appeared when this case was called.

Resolved, that the appeal be and it hereby is *dismissed*, without prejudice, for lack of prosecution.

88-23-A.

APPELLANT—Tottenville Copper Co., Inc., owner.

SUBJECT—Appeal from order of fire commissioner.

PREMISES AFFECTED—East side of Church street, 200 ft. north of Railroad avenue, Tottenville, Richmond.

APPEARANCES—

For Appellant: Harry Groedell and Robert Werner.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Appeal granted on condition.

CONDITIONS—As specified in resolution.
THE VOTE—

Affirmative: Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison, Holland and Fire Chief Kenlon	6
Negative	0
Absent: Mr. Connell	1

THE RESOLUTION:

(588-23-A)

WHEREAS, Tottenville Copper Co., Inc., owner, filed, May 14, 1923, an appeal, with the board of appeals, from an order of the fire commissioner, affecting premises east side of Church street, 200 ft. north of Railroad avenue, Tottenville, Richmond; and

WHEREAS, the order of the fire commissioner, dated May 2, 1923, reads:

"1. Install a standpipe system with risers 4 inches in diameter * * *. Section 581, Ch. 5, Code of Ordinances.";

and

WHEREAS, the building is fireproof, one story (20 ft.) in height, 125 ft. by 204 ft. (25,500 sq. ft.) in area; OCCUPIED as manufacture and storage of metals, 40 employees; and

WHEREAS, this appeal was granted by the board at its meeting, held September 18, 1923, on condition that a standpipe system be provided in accordance with the rules of the board of standards and appeals, connected with yard hydrant system, supplied from a 10,000 and 25,000 gallon tank with a 25,000 gallon reservoir for emergency, plans for proposed layout to be submitted to the fire department; and

WHEREAS, appellant requests a modification of the resolution to permit the present 3 in. underground mains with five 2 in. standpipes and connecting with the 6 in. yard main to remain; the yard main being connected with the tanks and reservoir, and contends to change the present 3 in. underground main would be very difficult, owing to the underpinning of reverbatory furnaces which now stands over the pipe line, and states that they have installed two 4 in. fire hydrants, each with 100 ft. of 2½ in. hose, outside the building.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and that the appeal be and it hereby is *granted on condition* that the present standpipe and yard system as now installed be maintained; that any by-pass around the tank checks be removed; and that sufficient hose be provided at the yard hydrants to cover all buildings on the premises.

BUILDING ZONE CASE.

378-24-BZ.

APPLICANT—John J. Dunnigan, for Hesu Realty Co., Inc., owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles.

PREMISES AFFECTED—1104-1109 Union avenue, The Bronx.

APPEARANCES—

For Applicant: John J. Dunnigan.

For Opposition: Arthur G. Basch

ACTION OF BOARD—Application granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Messrs. Kennedy, Dowd, Gunnison, Holland, Connell and Fire Chief Kenlon ..	6
Negative: Chairman Walsh	1
Absent	0

THE RESOLUTION:

(378-24-BZ)

WHEREAS, John J. Dunnigan, for Hesu Realty Co., Inc., owner, filed, March 11, 1924, an application, under the building zone resolution, to permit in a business district the erec-

MINUTES

tion and maintenance of a garage for the storage of more than five motor vehicles; premises 1101-1109 Union avenue, The Bronx; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its regular meeting, July 14, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Union avenue, East 166th street and East 167th street are business districts; and

WHEREAS, the decision of the superintendent of buildings, rendered February 21, 1924, in acting on N. B. Application No. 19-1924, reads:

"Erection of proposed garage for storage of more than five motor vehicles in business district is contrary to provisions of Building Zone Resolution.";

and

WHEREAS, the proposed building is to be of non-fireproof construction, two stories in height, with a frontage of 51 ft. 4 in. and a depth of 130 ft. 6 in.; to be occupied as a garage for the storage of more than five motor vehicles; and

WHEREAS, it was contended by applicant that this board granted application for garage within 100 ft. of location of premises now under appeal, and that while the Supreme Court reversed this decision, the Appellate Division of the Supreme Court, on May 15th, sustained this board's decision; and applicant further contended that the premises now under appeal is within 50 ft. of a garage which existed prior to July, 1916, between the same intersecting streets, and which accommodates more than five (5) motor vehicles.

Resolved, that the board of appeals does hereby make a variation in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is granted on condition that the building shall be restricted to a two-story structure, above grade, without cellar, other than the space required for boiler; that building shall be constructed fireproof; that a rear yard shall be provided and maintained not less than 10 ft. deep for the entire width of rear of building, at the 2nd story floor level; that the rear and gable walls shall be unpierced throughout their entire height and length; that the skylight at 2nd story level shall be of metal construc-

tion, provided with fixed louver ventilators and glazed with wire glass; that any skylights installed in the main roof shall be glazed with plain glass, protected with wire guards above and below; that the start of any runway installed shall be set back not less than 10 ft. from street wall; that the front elevation shall be finished in face brick with architectural terra cotta or stone trimmings; and that all permits necessary for the prosecution of the work shall be obtained within nine months and the building completed within eighteen months from the date of this action.

AREAS FIXED. (528-25-BZ)

The chairman presented and read a communication from Alfred J. Boulton, requesting the board to fix the area of notification deemed affected by the erection and maintenance of a poultry slaughter house; premises north side Bay 37th street, 285 ft. north of Cropsey avenue, Brooklyn.

The following area was approved by the board:

Both sides of Bay 37th street from Bath avenue to Cropsey avenue; also the property at rear and for a distance of 50 ft. on either side of the side lines of the premises in question.

(609-25-BZ)

The chairman presented and read a communication from Felix A. Muldoon, requesting the board to fix the area deemed affected and within which to obtain consents for the erection and maintenance of a garage; premises west side of River avenue, 100 ft. south of East 167th street, The Bronx.

The following area was approved by the board:

Both sides of River avenue from a point 100 feet north of East 167th street to a point 400 ft. south of proposed garage; south side of East 167th street from River avenue to Cromwell avenue; also the east side of Cromwell avenue from East 167th street to a point 250 ft. south of East 167th street.

Adjourned 1.40 p. m.

WILLIAM J. O'GORMAN, *Secretary*.

THE RESOLUTION.

203-25-S.

WHEREAS, Longman & Martinez, for W. Longman, Sr., and Elizabeth H. Longman, owners, filed, February 19, 1925, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in orders of the fire commissioner, affecting premises 28-36-38-46 Roebing street, 220-230 North 10th street and 219-229 North 9th street, Brooklyn; and

WHEREAS, the orders of the fire commissioner read:

"Order No. 59704-LD: affecting premises 28-36 Roebing street, and 219-229 North 9th street:

"Inspection shows the following to be necessary to make the above premises comply with the requirements of the labor law.

"1. Extend the interior stairway at the south side of building to the roof, as per Section 271 of the Labor Law."

"Order No. 59707-LD: affecting premises 38-46 Roebing street and 220-230 North 10th street:

"1. Extend the interior stairway at the north side of building to the roof, as per Section 271 of the Labor Law."

"Order No. 65572-LD: affecting premises 38-46 Roebing street and 220-230 North 10th street:

"1. Remove the substandard fire escape on the north side of the building or reconstruct same as per Section 274 of the Labor Law except that in lieu of a counter-balanced stairs, a drop ladder in guides from the lowest balcony to the ground may be provided.";

and

"Order No. 65573-LD: affecting premises 28-36 Roebing street and 219-229 North 9th street:

"1. Remove the substandard fire escape on the south side of the building or reconstruct same as per Section 274 of the Labor Law, except that in lieu of a counter-balanced stairs, a drop ladder in guides from the lowest balcony to the ground may be provided.";

and

WHEREAS, the building is non-fireproof, 4 stories and basement in height, having a frontage of 54 ft. 6 in. on North 9th street and also on North 10th street, and a frontage of 200 ft. on Roebing street, separated into two portions by a brick partition wall—openings therein, on each story, protected with fire doors on each side of opening; OCCUPIED for the manufacture of pants, 16 persons above the 1st story. EXITS: Three interior unenclosed wooden stairways, extending from the 1st to the top story, with wood trap doors, held open by fusible link at stair hatchway on each story; two substantial fire escapes on the North 9th street and North 10th street fronts of the premises, each extending from the top story to the street; roofs of adjoining buildings are 39 feet lower; and

WHEREAS, petitioner contends that fire drills are conducted during which the employees are instructed to pass through the fire doors from one wing of the building to the other wing, thence down the stairways to the street, and are not instructed to use the fire escapes, and contends further in view of the light occupancy of the premises that the existing means of egress are adequate;

Resolved, that the board of standards and appeals does hereby make a variation from the requirements of the labor

law, and the petition be and it hereby is *granted on condition* that fixed double rung iron ladders shall be provided on the top story from north and south stairs to scuttles in roof; that a goose neck ladder shall be provided from each top story balcony to the roof; all openings on course of fire escape to be made fireproof.

393-25-S.

PETITIONER—Samuel Rosenblum, for Rexton Realty Co., owner.

SUBJECT—Variation of labor law as cited in order of fire commissioner.

PREMISES—127-133 West 17th street, Manhattan.

APPEARANCES—

For Petitioner: Samuel Rosenblum.

For Administration: Inspector Maher of fire department.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison, Holland, Superintendents Brady, Reville, Kleinert and Moore..... 9
Negative 0

Absent: Mr. Connell, Fire Chief Kenlon, Deputy Fire Commissioner Hannon and Superintendent McDermott 4

THE RESOLUTION:

393-25-S.

WHEREAS, Samuel Rosenblum, for Rexton Realty Co., owner, filed, April 11, 1925, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in an order of the fire commissioner, affecting premises 127-33 West 17th street, Manhattan; and

WHEREAS, the order of the fire commissioner, dated March 21, 1925, reads:

"Inspection shows the following to be necessary to make the above premises comply with the requirements of the Labor Law.

"2. Provide an additional means of exit from the cellar, said exit to be located at the front of the building in accordance with the provisions of Section 271 of the Labor Law.

"3. Enclose the interior stairway at north side of building, serving as a required means of exit, and the landings, platforms, and passageways connecting therewith on all sides with partitions of fire resisting material extending continuously from the cellar to 3 feet above the roof, constructed as per Section 271 of the Labor Law.

"4. Extend the interior stairway at the north side of building to the roof, as per Section 271 of the Labor Law, said extension and the landings and passageways connecting therewith to be enclosed on all sides with partitions of fire resisting material extending at least 3 ft. above the roof, as per Sections 271 and 272 of the Labor Law and Rule 2 of the Industrial Code.

"5. Provide egress to the street from the stairway at the north side of the building by means of a passageway enclosed in fire resisting material as per Section 271 of the Labor Law.";

and

WHEREAS, the building is non-fireproof, 6 stories in height, 90 ft. by 85 ft. in area; subdivided on each story by a fore and aft partition wall—constructed of wood lath and plaster on the 3rd story and on the 1st, 2nd, 5th and 6th stories constructed of plaster blocks—with openings therein on each story; OCCUPIED as a tenant factory (principally suit and cloak manufacturers), approximately 270 persons above the 1st story—the 2nd story, east, being vacant at present; EQUIPPED with a sprinkler system and a fire alarm signal system. EXITS: Three interior wooden stairways; the

MINUTES

asterly and westerly stairs extending from 1st story to the roof and the north stairways extending from the 1st to the top story; the east and west stairway being enclosed by fire resisting partitions and the north stairway enclosed by wood lath and plaster partitions, with metal covered doors at openings in the east and west stairs, and also the west side of the north stairway, the remainder being wooden doors; two sub-standard fire escapes on the rear of the building which will be removed; the northerly stairway terminating in the rear yard of the premises; ROOFS of adjoining buildings: to East—2 stories higher; to West—same height; and

WHEREAS, petitioner proposes to provide kalamein doors in lieu of the wooden doors in the enclosure of the northerly stairway; contends that the cellar is used for storage only and has no regular occupancy excepting the engineer and requests the acceptancy of the existing means of exit;

Resolved, that the board of standards and appeals does hereby make a variation from the requirements of the labor law, and the petition be and it hereby is granted as to item No. 2, on condition that an engineer's fixed iron ladder shall be provided to a counter balanced sidewalk bulkhead or trap door for each section of the cellar; granted, as to item No. 3, on condition that the loft side of the stair enclosure shall be covered with 1/2 inch plaster board and metal and all openings therein to be equipped with self-closing fireproof doors; granted, as to item No. 4, on condition that a fixed double rung iron ladder shall be provided from stair halls to the roof; granted, as to item No. 5, on condition that the stairway shall be enclosed as specified for item No. 3 and extended to the yard level, with opening at yard level not less than 3 ft. 6 in. by 6 ft. high, with egress from yard through adjoining open yards for not less than 150 ft. to west; granted so long as conditions as to occupancy and use remain unchanged.

25-25-S.

PETITIONER—Samuel Rosenblum, for W. A. McLaughlin, lessee.

SUBJECT—Petition for variation of labor law as cited in order of fire commissioner.

PREMISES AFFECTED—304 Fifth avenue, Manhattan.

APPEARANCES—

For Petitioner: Samuel Rosenblum.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Petition granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison, Connell, Superintendents Brady, Reville, Kleinert and Moore..... 10
Negative 0
Absent: Fire Chief Kenlon, Deputy Fire Commissioner Hannon and Superintendent McDermott 3

THE RESOLUTION:

425-25-S.

WHEREAS, Samuel Rosenblum, for W. A. McLaughlin, lessee, filed, April 20, 1925, a petition with the board of standards and appeals, for variation from the requirements of the labor law, as cited in an order of the fire commissioner, affecting premises 304 Fifth avenue, Manhattan; and

WHEREAS, the order of the fire commissioner, dated March 1, 1925, reads:

"1. Enclose the interior stairway, at the south side of the building from the 1st to the 4th story, with partitions of fire resisting material, as per Section 271 of the Labor Law and Rule 1, board of standards and appeals, adopted July 29th, 1924.

"2. Arrange the fire escape on the rear of building and the openings leading thereto and the windows opening on the course thereof so that same are in compliance with the provisions of Section 273 and 274 of the

Labor Law and the rules of the Board of Standards and Appeals, or carry out a proper alternative method of complying with the requirements of Section 271 of the Labor Law.

"Among the defects noted are the following:

"No fireproof passageway from termination to street.";

and

WHEREAS, the building is non-fireproof, 4 stories in height, 20 ft. by 100 ft. in area on the 1st story and 20 ft. by 70 ft. in area above. OCCUPIED as follows: 1st story, store, 11 persons; 2nd story, showroom, 7 persons; 3rd story, cutting departments and stock room, 10 persons; 4th story, mfg. of shirts, 20 persons; the entire building being OCCUPIED by one tenant. EXITS: An interior wooden stairway extending from 1st story to top story (with iron ladder to scuttle in roof) enclosed in wood lath and plaster partitions with wooden doors glazed with wire glass at openings; a party wall fire escape (connecting on every floor with premises No. 306 Fifth avenue) on the rear of the building, extending from the main roof to the roof of the 1st story extension; the windows along the course thereof being fireproof except at the 4th story; and also horizontal openings, leading to the building to the north, on the 3rd and 4th stories; openings protected by regulation fireproof doors. ROOFS of adjoining buildings: to North—2 ft. higher; to South—8 stories higher; and

WHEREAS, petitioner contends that a similar petition on these premises (Cal. No. 1510-21-S) was granted; since that time the occupancy of the 3rd story was increased from 8 to 10 persons and on the 4th story the occupancy was increased from 16 to 20 persons; and contends further that since the granting of said petition an additional horizontal exit has been provided on the 4th story;

Resolved, that the board of standards and appeals does hereby make a variation from the requirements of the labor law, and the petition be and it here is granted on condition that the occupancy shall be restricted to 7 persons on the 2nd story; 10 persons on the 3rd story; 20 persons on the 4th story, and on further condition that the resolution of January, 1924, shall be complied with in all other respects and that horizontal exits shall be provided on the 3rd and 4th stories connecting with premises to the north.

THE RESOLUTION:

427-25-S.

WHEREAS, Samuel Rosenblum, for estate of Elizabeth Chesebrough, owner, filed, April 21, 1925, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in an order of the fire commissioner, affecting premises 32 Great Jones street, Manhattan; and

WHEREAS, the order of the fire commissioner, dated March 31, 1925, reads:

MINUTES

"Order No. 74869-LD:

"1. Provide safe and unobstructed egress from the lower termination of the fire escape at rear of building, by constructing a fireproof passageway with an unobstructed width of at least three feet throughout, leading to the street, adequately lighted at all times during working hours, or by means of providing access to an open area having communication with the street, as per Section 273 of the Labor Law.";

and

WHEREAS, the building is non-fireproof, 4 stories in height, 22 ft. by 64 ft. in area. OCCUPIED as a tenant factory, total occupancy not to exceed 25 persons above the 2nd story. EXITS: An interior wooden stairway extending from the 1st story to the roof, enclosed in wood lath and plaster partitions (open on the 4th and part of the 1st story) with wooden doors at openings; a 60 degree fire escape (with fireproof windows along the course thereof) on the rear of the building, extending from the roof to 1st story balcony with connecting stair to yard, with egress from the termination of fire escape by means of adjoining open yards of buildings No. 34, No. 36 and No. 38 Great Jones street, all under the same ownership. ROOFS of adjoining buildings: To east—same height to west—4 stories higher; and

WHEREAS, petitioner contends that egress from the open yards to the street may be had through doors leading to basement of adjoining premises;

Resolved, that the board of standards and appeals does hereby *make a variation* from the requirements of the labor law, and the petition be and it hereby is *granted*, only so far as it affects the egress from the termination of the fire escape, *on condition* that openings shall be provided at the yard level of premises adjoining to east, Nos. 34, 36, 38 Great Jones street, with egress through yard doors to street.

THE RESOLUTION:

1463-24-S.

WHEREAS, Croker National Fire Prevention Engineering Co., for Ethel Shulman, owner, filed, December 12, 1924, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in an order of the fire commissioner, affecting premises No. 8 West 29th street, Manhattan; and

WHEREAS, the order of the fire commissioner, dated October 23, 1924, reads:

"Order No. 66596-LD:

"1. Arrange the fire escape on the rear of buildings and the openings leading thereto and the windows opening on the course thereof so that same are in compliance with the provisions of Sections 273 and 274 of the Labor Law and the rules of the Board of Standards and Appeals, or carry out a proper alternative method of complying with the requirements of Section 271 of the Labor Law.

"NOTE: Among the defects noted on this fire escape are the following: Windows on course not fireproof nor self-closing. No 60 degree stairs connecting balcony. No stairway from lowest balcony to ground. No safe passageway to street from the termination. Requires scraping and painting. No stairway from balcony to roof. Balcony on 2nd story not enclosed with railing.

"2. Enclose the interior stairway at west side of building serving as a required means of exit, and the landings, platforms and passageways connected therewith on all sides, with partitions of fire resisting material extending continuously from the 1st story to and including the underside of the roof boarding as per Section 271 of the Labor Law and rules of the Board of Standards and Appeals amended July 29, 1924, or carry out a proper alternative method of complying with Section 271 of the Labor Law.";

and

WHEREAS, the building is non-fireproof, 5 stories and cellar in height, 25 ft. by 92 ft. 3 in. in area at curb level, and 83 ft. 3 in. deep 1st to 2nd story; 48 ft. deep above. OCCUPIED as a tenant factory, principally furriers, 42 persons above the ground floor. EXITS: An interior wooden stairway extending from the 1st story to the 4th story, enclosed in wood lath and plaster partitions with wooden doors at openings, iron ladder to roof scuttle; a fire escape on the rear of the building extending from the roof to the 1st story, with egress from the termination of fire escape by means of the first story balcony extended to roof of 1st story extension of property adjoining at west; roofs of adjoining buildings are 8 ft. 2 in. higher at east and 2 stories higher at west; and

WHEREAS, petitioner proposes to comply with Item 1 of the order (except providing a passageway to the street) to extend the fire escape down to the ground and cut doorway into the wall of adjoining extension at east foot use as an exit from the foot of fire escape; Re. to Item 2 he further proposes to cover the loft side of stair enclosure with 1/2 in. plaster boards and No. 26 gauge metal; also to provide fireproof doors to all openings; and

WHEREAS, petitioner contends that the exits will then be adequate and requests favorable consideration on this petition;

Resolved, that the board of standards and appeals does hereby *make a variation* from the requirements of the labor law, and the petition be and it hereby is *granted*, as to item No. 1, only so far as it affects the egress from the termination, *on condition*, that open door shall be provided at the yard level to adjoining premises to the east; granted as to item No. 2, *on condition*, that the loft side of the stair hall enclosure shall be provided with plaster board and metal with all openings therein equipped with self closing fireproof doors; *granted* only so long as conditions as to occupancy and use remain unchanged.

Absent: Mr. Dowd, Deputy Fire Commissioner Hannon, Superintendents Brady and McDermott 4

THE RESOLUTION:

(347-25-S)

WHEREAS, William Higginson, for Wendell & Evans, owner, filed, March 31, 1925, a petition, with the board of standards and appeals, for variation from the requirements

of the labor law, as cited in an order of the fire commissioner and a decision of the superintendent of buildings, affecting premises 47-47½ Christopher street, Manhattan; and WHEREAS, the order of the fire commissioner, dated June 27, 1924, reads.

"Order No. 61860-LD:

"1. Arrange the fire escape at the rear of building and the openings leading thereto and the windows opening on the course thereof, so that same are in compliance with the provisions of Sections 273 and 274 of the Labor Law and the rules of the Board of Standards and Appeals, or carry out a proper alternative method of complying with the requirements of Section 271 of the Labor Law.

"NOTE: Among the defects noted are the following:

"No balcony at 2nd story level. No stairway from 2nd story to ground. No fireproof passageway from termination to street."

The decision of the superintendent of buildings, rendered February 13, 1925, reads:

"Before a Certificate of Occupancy can be issued on the above premises, it will be necessary to comply with the following objections:

"Area of wire glass in doors to stair enclosure exceeds 360 square inches in a single pane; no legal 2nd means of exit from each floor to comply with the Labor Law; door leading to boiler room not self-closing; cellar ceiling over boiler room not fire retarded and bulkhead over 60 degree stairs from top story to roof not fireproof.";

and

WHEREAS, the building is non-fireproof, four stories and basement in height, 34 ft. by 93.6 ft. in area. OCCUPIED as follows: Basement, storage, no occupancy; 1st story, garage for electric autos, 2 persons; 2nd story, repair storage batteries, 2 persons; 3rd and 4th stories, repairing and sorting linen, 10 persons on each story. EXITS: An interior iron stairway extending from the 1st story to the top story, enclosed in fireproof partitions, with fireproof (wire glass paneled) doors at openings; a fire escape on the rear of the building, extending from the top story to the roof of the building to the north; ROOFS of adjoining buildings, one story lower; and

WHEREAS, petitioner proposes to provide a wooden interior stairway (enclosed in fire retarded partitions) connecting the termination (at the 3rd story) of the existing fire escape with the 1st story of the premises; Egress from the termination of said proposed wooden stairway through the 1st story to the street; and petitioner requests, otherwise, the acceptance of the existing means of egress.

Resolved, that the board of standards and appeals does hereby make a variation from the requirements of the labor law, and that the petition be and it hereby is granted, as to Order No. 61860, Item No. 1 of the Fire Department, on condition that an exterior stairway shall be provided on the rear of the building from 4th to 3rd story to roof of rear building and connecting to fire retarded stairs at the 3rd story level, extending to the 1st story; all openings therein to be protected with self-closing fireproof doors, and be fire-retarded throughout, with open passage to street; granted only so long as conditions as to occupancy and use remain substantially unchanged; granted, as to order of superintendent of buildings, only so far as it affects the 2nd means of egress; and denied in all other respects.

387-25-S.

PETITIONER—Marchand Bros. & Co., lessee.

SUBJECT—Variation of labor law as cited in decision of fire commissioner.

PREMISES AFFECTED—88 University place, Manhattan.

APPEARANCES—

For Petitioner: George R. Whitehead.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Petition granted on condition.
CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Kennedy, Gunnison, Connell, Holland, Fire Chief Kenlon and Superintendents Brady, Reville, Kleinert and Moore..... 10
Negative 0
Absent: Mr. Dowd, Deputy Fire Commissioner Hannon and Superintendent McDermott 3

THE RESOLUTION:

(387-25-S)

WHEREAS, Marchand Bros. & Co., lessee, filed, April 9, 1925, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in a decision of the fire commissioner, affecting premises 88 University place, Manhattan; and

WHEREAS, the decision of the fire commissioner, dated January 22, 1925, reads:

"This will reply to your letter of January 19th, 1925, in which you request permission to keep doors leading to stairs which are arranged to be opened from the floor side only and also to keep the iron grill in front of them.

"Our records indicate that the above premises is a 'factory' building and there is a 'factory' conducted on the story which doors serve as exit.

"Section 272, subdivision 3 of the Labor Law reads insofar as it is applicable to the above case:

"No door leading into or out of any factory on any floor thereof shall be locked, bolted or fastened during working hours."

"The Fire Commissioner is charged with the enforcement of this section of law but is not empowered to vary from or hold the same in abeyance in any particular; therefore, we must advise you that the doors must be arranged so as not to be locked, bolted or fastened during working hours.";

and

WHEREAS, the building is fireproof, 11 stories in height, "L" shaped in area, having a frontage of 48 ft. on East 12th street and 31 ft. on University place; OCCUPIED as a tenant factory, approximately 200 persons above the 1st story; petitioner occupying the 11th story for cutting and polishing diamonds; EQUIPPED with a sprinkler system and a fire alarm signal system. EXITS: Two interior fireproof stairways extending from the 1st story to the roof, enclosed in fireproof partitions, with fire doors at openings; and ROOFS of adjoining buildings are three and four stories lower; and

WHEREAS, petitioner contends that a very large and valuable stock of diamonds are kept on the premises and that the doors are locked as a precaution against robbery.

Resolved, that the board of standards and appeals does hereby make a variation from the requirements of the labor law, and that the petition be and it hereby is granted on condition that the doors from the public corridors shall be unfastened and unlocked from both sides during working hours, and the openings before this board on petition be provided with panic bolts on the interior side; granted only so far as it affects the occupancy of the 11th story, while maintained for the use and occupancy of diamond cutting and polishing.

1412-23-S.

PETITIONER—Henry J. Nurick, for Brewster Publications, Inc., owner.

SUBJECT—Variation of labor law, as cited in decision of superintendent of buildings.

PREMISES AFFECTED—174 Duffield street, Brooklyn.

APPEARANCES—

For Petitioner: Louis L. Klein.

ACTION OF BOARD—Petition granted on condition.
CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Kennedy, Gunnison, Holland, Connell, Superintendents Brady, Reville, Kleinert and Moore

Negative

Absent: Mr. Dowd, Fire Chief Kenlon, Deputy Fire Commissioner Hannon and Superintendent McDermott

THE RESOLUTION:

(1412-23-S)

WHEREAS, Henry J. Nurick, for Brewster Publications, Inc., owner, filed, December 3, 1923, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in a decision of the superintendent of buildings, affecting premises 174 Duffield street, Brooklyn; and

WHEREAS, the decision of the superintendent of buildings, rendered October 10, 1923, in acting on Application No. 17816-23, reads:

"The following objections have been filed by the examiners:

"Labor Law in regard to factory exits. Section 270, Par. 4, requires all stairways serving as required exits, to lead directly to street, or to a fireproof passage leading to same.";

and

WHEREAS, the building is non-fireproof, three stories in height, 75 ft. by 35 ft. in area; OCCUPIED as a factory, 1st story, 6 persons; 2nd story, 20 persons; 3rd story, 25 persons; the means of egress consisting of an interior stairway extending from the 1st story to the roof, enclosed in terra cotta partitions with fireproof self-closing glass doors at the openings; it is proposed to connect the building, which is at the rear of the lot, to a building at the front of the lot, by means of a non-fireproof brick extension 18 ft. by 24 ft. in area, and to provide an outside iron stairway leading from the roof to the yard, with egress from the yard into the adjoining yard to the south and horizontal exit from the factory to the extension; and

WHEREAS, this petition was granted by the board of standards and appeals on February 26, 1924, on certain conditions, reopened April 21, 1925, and set for a hearing; and

WHEREAS, the building now has a reduced occupancy; 1st story, 6 persons; 2nd story, 10 persons; 3rd story, 10 persons; a horizontal exit on each story with fire doors through the new extension to the front building as a second means of exit; and

WHEREAS, the petitioner has requested a modification of the original resolution to omit the requirement of the 60 degree fire escape on the east side of building, which, if erected, would extend on premises of adjoining owner, and further contends that the exits are adequate without such additional fire escape.

Resolved, that the board of standards and appeals does hereby make a variation from the requirements of the labor law, and the petition be and it hereby is granted on condition that the occupancy shall not exceed twenty (20) persons above the 1st story.

1467-24-S.

PETITIONER—Anchor Cap & Closure Corp., owner.
SUBJECT—Variation of labor law as cited in decision of fire commissioner.

PREMISES AFFECTED—22 Queens street, Long Island City, Borough of Queens.

APPEARANCES—

For Petitioner: E. H. Rack.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Petition granted on condition.
CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Kennedy, Gunnison, Connell, Superintendents Brady, Reville, Kleinert and Moore.... 8
Negative: Mr. Holland 1
Absent: Mr. Dowd, Fire Chief Kenlon, Deputy Fire Commissioner Hannon and Superintendent McDermott 4

THE RESOLUTION:

(1467-24-S)

WHEREAS, E. H. Rack, for Anchor Cap & Closure Corp., owner, filed, September 19, 1924, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in a decision of the fire commissioner, affecting premises 22 Queens street, L. I. C., Borough of Queens; and

WHEREAS, the decision of the fire commissioner, rendered July 23, 1924, reads:

"Answering your request of June 25th, for permission to allow smoking in your cafeteria at No. 22 Queens Street, Long Island City, I beg to state that, in accordance with the resolution adopted by the Board of Standards and Appeals, smoking may be permitted under certain classes of buildings:

"A. Factories engaged in the manufacture of cigars, cigarettes, smoking tobacco, when necessary for the efficient conduct of the business, provided * * *.

"B. Factories devoted entirely to one of the following occupancies: Blacksmith; horseshoeing; boiler making; brick, terra cotta or artificial stone works; forge shop; foundries; iron, steel, brass or copper works; machine shop; smelting; stone or monumental works; provided that in any case said building is not of wood construction * * *.

"You will note that no provision has been made in the foregoing rule to allow smoking in building occupied other than the above. * * *."

and

WHEREAS, the building is fireproof, six stories in height, 59 ft. by 100 ft. in area; OCCUPIED as a factory; 1st story, mfg. rubber, 60 persons; 2nd story, storage and lunch room, 10 persons; 3rd story, mfg. caps, 150 persons; 4th story, electroplating plating, 20 persons; 5th story, machine shop, 80 persons; 6th story, offices and lithographing, 75 persons; EQUIPPED with a sprinkler system. EXITS: Three interior fireproof stairs extending from 1st story to roof. Day enclosed in fireproof partitions with fireproof doors at openings; there are no buildings adjoining; and

WHEREAS, the petitioner claims: a competent person is in charge at all times to enforce effective rules for smoking in the premises; a safety committee makes weekly inspections to detect any fire hazard; the building is fireproof; and extinguishers are provided throughout the building; under such safeguards he requests the board to permit smoking in the lunchroom on 2nd story and main office, 6th story.

Resolved, that the board of standards and appeals does hereby make a variation from the requirements of the labor law, and the petition be and it hereby is granted, only so far as it affects the cafeteria dining room on the 2nd story, enclosed in fireproof partitions; all openings therein to be equipped with self-closing fireproof doors; also the executive offices on the 6th story on the exterior of the building, with openings therein direct to the outer air.

PETITIONER—Croker National Fire Prevention Engineering Co., for Geisman, Musliner & Brightman, Inc., lessee.

SUBJECT—Variation of labor law as cited in order of fire Commissioner.

PREMISES AFFECTED—302-22 Butler street, Brooklyn. APPEARANCES—

For Petitioner: H. E. Horwood.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Petition granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Kennedy, Holland, Connell, Superintendents Brady, Reville, Kleinert and Moore 8
Negative 0
Absent: Messrs. Dowd, Gunnison, Fire Chief Kenlon, Deputy Fire Commissioner Hannon and Superintendent McDermott 5

THE RESOLUTION:

(119-25-S)

WHEREAS, Croker National Fire Prev. Eng. Co., for Butler Street Realty Corporation, owner, filed, January 27, 1925, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in an order of the fire commissioner, affecting premises 302-22 Butler street, Borough of Brooklyn; and

WHEREAS, the order of the fire commissioner, dated December 2, 1924, reads:

"1. Enclose the interior stairway at northwest corner of building serving as a required means of exit, and the landings, platforms and passageways connecting therewith on all sides with partitions of fire resisting material extending continuously from the 1st story to the underside of the roof beams, constructed as per Section 271 of the Labor Law and Rule 1 as amended Board of Standards and Appeals July 29th, 1924.

"2. Arrange the fire escape on the south side of building and the openings leading thereto and the windows opening on the course thereof so that same are in compliance with the provisions of Section 273 and 274 of the Labor Law and the rules of the Board of Standards and Appeals, or carry out a proper alternative method of complying with the requirements of Section 271 of the Labor Law. See NOTE.

"NOTE:—Among the defects noted are the following: Windows on course not fireproof self-closing. No stairway from 4th story balcony to roof.

"3. Remove the substandard fire escape on the north side or reconstruct same to conform to Section 274 of the Labor Law and Rule 3 as amended by the Board of Standards and Appeals amended May 9th, 1924.

"NOTE:—Among the defects noted are the following: Windows on course not fireproof self-closing. No drop ladder in guides from lowest balcony to ground."

and

WHEREAS, the building is non-fireproof, four stories in height, 111 ft. by 100 ft. in area; OCCUPIED as a factory building, manufacturing leather goods, 54 persons above the 1st story; EQUIPPED with a fire alarm signal system. EXITS: Two interior wooden stairways extending from 1st story to top story; enclosed in wooden partitions at 1st and 2nd stories only with wooden doors at openings; a fire escape on the rear of the building extending from top story to yard level; with EGRESS from the termination of fire escape by means of a driveway direct to Butler street; a sub-standard fire escape on Butler street front; there are no buildings adjoining; and

WHEREAS, the petitioner proposes to bring the rear fire escapes, also the front sub-standard fire escapes, up to standard; he claims the building will then be provided with adequate means of egress, and requests the board to accept his proposal as compliance with Order No. 69108-LD.

Resolved, that the board of standards and appeals does hereby make a variation from the requirements of the labor law, and the petition be and it hereby is granted, as to Item No. 1, on condition that the stairs shall be enclosed on the first story with plaster board and metal, all openings therein

MINUTES

to be provided with self-closing fireproof doors; and *granted on further condition* that the present fire escapes shall be made standard in accordance with the requirements of the labor law.

352-25-S.

PETITIONER—George and Edward Blum, for Sigwin Building Corp., owner.

SUBJECT—Variation of labor law as cited in decision of superintendent of buildings.

PREMISES AFFECTED—491-495 Seventh avenue, Manhattan.

APPEARANCES—

For Petitioner: Charles Mullin,

ACTION OF BOARD—Petition granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Kennedy, Holland, Connell, Superintendents Brady, Reville, Kleinert and Moore 8

Negative 0

Absent: Messrs. Dowd, Gunnison, Fire Chief Kenlon, Deputy Fire Commissioner Hannon and Superintendent McDermott 5

THE RESOLUTION:

(352-25-S)

WHEREAS, George Blum, for Sigwin Building Corp., owner, filed, April 1, 1925, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in a decision of the superintendent of buildings, affecting premises 491-495 Seventh avenue, Manhattan; and

WHEREAS, the decision of the superintendent of buildings, rendered March 19, 1925, in acting on N. B. Application 102-25, reads:

"Area of glass panes should not exceed 720 square inches, Labor Law, Section 264-7.";

and

WHEREAS, the building is fireproof, 24 stories in height, 60 ft. by 75 ft. in area. OCCUPIED: 1st story, stores; upper stories, show rooms and 25 per cent manufacturing, 30 persons per story; EQUIPPED with a sprinkler system and a fire alarm signal system. EXITS: Two interior fireproof stairways extending from 1st story to roof; enclosed in fireproof partitions with fire doors at openings; and

WHEREAS, there are openings in the front wall of the building on the 1st, 2nd and 3rd stories, glazed with $\frac{1}{4}$ in. plate glass; the maximum area of the glass on the 1st story being 9 ft. 6 in. by 17 ft. 4 in. and the maximum area of the glass on the 2nd and 3rd stories being 3 ft. $1\frac{1}{8}$ in. by 6 ft. 9 in.; and

WHEREAS, petitioner contends that to comply with the labor law was to the area of the glass on the 1st, 2nd and 3rd stories would destroy the proposed use of these stories and also would materially affect the architectural appearance of the building.

Resolved, that the board of standards and appeals does hereby *make a variation* from the requirements of the labor law, and the petition be and it hereby is *granted*, only so far as it affects the windows on the three (3) lower stories on the street front, *on condition* that openings shall be equipped with polished plate glass not less than $\frac{1}{4}$ in. in thickness, installed in approved metal frames, and that the requirements of the labor law shall be complied with in all other respects.

396-25-S.

PETITIONER—Samuel Rosenblum, for James F. Zweighaft, owner.

SUBJECT—Variation of labor law as cited in order of fire commissioner.

PREMISES AFFECTED—152 West 24th street, Manhattan.

APPEARANCES—

For Petitioner: Samuel Rosenblum.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Petition granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Kennedy, Gunnison, Holland, Connell, Superintendents Brady, Reville, Kleinert and Moore 9

Negative 0

Absent: Mr. Dowd, Fire Chief Kenlon, Deputy Fire Commissioner Hannon and Superintendent McDermott 4

THE RESOLUTION:

(396-25-S)

WHEREAS, Samuel Rosenblum, for James F. Zweighaft, owner, filed, April 11, 1925, a petition, with the board of standards and appeals, for variation from the requirements of the labor law as cited in an order of the fire commissioner, affecting premises 152 West 24th street, Manhattan; and

WHEREAS, the order of the fire commissioner reads:

"No. 39689-LC—Provide an outside iron balcony fire escape on the rear of building with balconies 4 ft. wide connected by stairways not less than 22 in. wide, placed at an incline of not more than 45 degrees, extending from the ground to the highest story, constructed as per section 273 of the labor law and the rules of the Board of Standards and Appeals.";

and

WHEREAS, the building is non-fireproof, three stories in height, 25 ft. by 94 ft. 9 in. in area. OCCUPIED: 1st story, lumber dealer, 3 persons; 2nd story, front, vacant at present; proposed occupancy, 7 persons; rear, furrier, 7 persons; 3rd story, front, furrier, 2 persons; rear, embroidery, 20 persons. EXITS: An interior wooden stairway extending from 1st story to roof, enclosed in wood lath and plaster on the 1st and 2nd stories and in wooden partitions on the 3rd story with wooden doors at the openings, a fire escape on the rear of the building extending from the roof to the 1st story, having a balcony connection on the 2nd story to the balcony leading to the exterior stairway on the rear of building No. 148-150 West 24th street; roofs of adjoining buildings to east, nine (9) stories higher; to west, six (6) feet higher; and

WHEREAS, petitioner proposes to fireproof the openings along the course of the fire escape excepting on the top story; contending there is no safe egress from the roof of the building in question, owing to the height of the adjoining buildings.

Resolved, that the board of standards and appeals does hereby *make a variation* from the requirements of the labor law, and the petition be and it hereby is *granted*, only so far as it affects egress from termination of fire escape on rear, *on condition* that the fire escape shall comply with the labor law in all other respects and shall be connected to outside iron stairway on adjoining premises to the east at 2nd story.

401-25-S.

PETITIONER—Samuel Rosenblum, for Forsythe Holding Co., owner.

SUBJECT—Variation of labor law as cited in order of fire commissioner.

PREMISES AFFECTED—118 Forsythe street, Manhattan.

APPEARANCES—

For Petitioner: Samuel Rosenblum.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Petition granted on condition.

CONDITIONS—As specified in resolution.

MINUTES

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Kennedy, Gunnison, Holland, Connell, Superintendents Brady, Reville, Kleinert and Moore 9
Negative 0
Absent: Mr. Dowd, Fire Chief Kenlon, Deputy Fire Commissioner Hannon and Superintendent McDermott 4

THE RESOLUTION:

(401-25-S)

WHEREAS, Samuel Rosenblum, for Forsyth Holding Co., petitioner, filed, April 14, 1925, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in an order of the fire commissioner, affecting premises 118 Forsyth street, Manhattan; and WHEREAS, the order of the fire commissioner, dated July 1924, reads:

"Order No. 63029-LD:

"1. Provide safe and unobstructed egress from the lower termination of fire escape at rear of building by constructing a fireproof passageway with an unobstructed width of at least 3 ft. throughout leading to the street, adequately lighted at all times during working hours, or by means of providing access to an open area having connection with the street, as per Section 273 of the Labor Law.";

WHEREAS, the building is non-fireproof, seven stories in height, 25 ft. 10¾ in. by 94 ft. in area; OCCUPIED as a plant factory, manufacturing clothing principally, 82 per cent above the 2nd story; 2nd story is used for restaurant purposes; Equipped with a fire alarm signal system. EGRESS: An interior fireproof stairway extending from entrance door to roof, enclosed in fire resisting partitions with fireproof doors at openings; a fire escape on the rear of

the building, extending from the roof to yard level, with egress from the termination of fire escape by means of a gate in fence to adjoining yard at north and also at south; ROOFS of adjoining buildings are two stories lower at north and six stories lower at south; and

WHEREAS, the petitioner claims that means of egress to the street through adjoining yards at north and south are maintained; that such egress has been previously accepted by the fire department, and he now requests the board to accept the present means of egress as adequate without change.

Resolved, that the board of standards and appeals does hereby make a variation from the requirements of the labor law, and the petition be and it hereby is granted, only so far as it affects the egress from the termination of the fire escape, on condition that an open passageway shall be maintained from the yard to adjoining yards, both north and south, with egress therefrom to adjoining tenement house direct to street, with iron bridge at the 1st story level from fire escape connected directly to yard of building to north with direct egress therefrom through hallway of adjoining tenement to street at 1st story; and on further condition that the occupancy of the building shall not exceed the legal capacity of the interior stairway.

APPLIANCE SUBMITTED FOR APPROVAL.

PETITIONER—International Heating Company.

SUBJECT—Approval of International Furnace Burner.

APPEARANCES—None.

ACTION OF BOARD—Placed on reserve calendar.

Adjourned 5.10 p. m.

WILLIAM J. O'GORMAN, Secretary.

RULES

COMMUNITY LAUNDRIES IN BUSINESS DISTRICTS

Recommended Resolution Adopted by the Board of Appeals, March 16, 1920, Under Cal. No. 549-17-BZ.

WHEREAS, the board of appeals, at its regular meeting, December 16, 1919, unanimously rescinded an opinion incidentally expressed and incorporated in a resolution adopted by the board on May 28, 1917, in acting on Cal. No. 549-17-BZ. This opinion was that a laundry is not a prohibited use in a business district under the building zone resolution. The board unanimously rescinded this expression of opinion, inasmuch as a laundry is a factory within the meaning of the labor law and must be so construed

under the building zone resolution in the absence of any definition therein to the contrary.

Resolved, that this shall not be construed to include within the prohibited uses specified under Section 4 of the building zone resolution a community or neighborhood laundry located in the basement or ground floor of a building within a business district and containing not more than eight (8) rotary washing machines with inside cylinders not more than 30 in. in diameter by 30 in. in length over all nor more than two 20 in. extractors, the 20 in. measurement being the diameter of the inside basket, which machines and extractors shall be operated solely by electric power and do not require the installation of steam boiler or plant.

WARNING.

Notice is hereby given to all petitioners, appellants and applicants for relief at the hands of the Board of Standards and Appeals and of the Board of Appeals, and to all lawyers, architects and engineers representing owners or lessees in proceedings before these boards—

First, That if they do not appear in person or by representative at the hearing on their case, dismissal for lack of prosecution is likely to result.

Second, That due and ample notice of the date set for hearing is provided in the publication in this BULLETIN of the calendars of these boards, each case being set down by Calendar Number and premises under the date of the hearing.

Third, That no plea of ignorance of the date of the hearing can be entertained in view of this publication and

of the posting of the calendars on the bulletin board in the offices of the board and of the further publication of the calendars in the daily press.

Fourth, That no one is entitled to written notice of the date for the hearing in his case, and that the plea of failure to receive such notice is no excuse for neglect to appear.

Fifth, That the business of these boards is to dispose of all cases promptly, for the reason that the pendency of an appeal or petition ties the hands of the administrative official in enforcing his order; therefore, no appeal or petition will be allowed to be hung up by reason of failure of the appellant or petitioner to file necessary data, or by any other method of delay.

CONTENTS

THE LIBRARY OF

AUG 4 1925

This issue of the Bulletin contains, in the order given—

- Docket.
- Call of Clerk's Calendar.
- The Trial Calendar.
- Notices in Building Zone Cases.
- Minutes of Meeting, Board of Appeals, July 21, 1925.
- Minutes of Special Meeting, Board of Appeals, July 21, 1925.
- Correction.
- Reserve Calendar.
- Progress Report.

DATES AND HOURS OF MEETING.

Board of Appeals, Tuesdays, at 10 a. m.
Special meetings as listed in this Calendar.
Call of Clerk's Calendar, Tuesdays, at 2 p. m.
Board of Standards and Appeals, as listed in the Calendar.
All hearings are held in Room 1013, Municipal Building, Manhattan.

HOURS FOR CONSULTATION.

10 A. M. to 1 P. M.

Any person desiring to consult the chairman or the engineers, pertaining to the work of either board, will be seen only between the hours of ten in the morning and one in the afternoon—Saturdays excepted.

CALL OF CLERK'S CALENDAR.

The Clerk's Calendar consists of applications under the Building Zone Resolution, and its object is to give interested property owners opportunity to file objections, if any, and will be called in Room 1013, Tuesday, July 28, 1925, at 2 o'clock. At this call each case is set for hearing on a definite day.

The next subsequent Call of the Calendar will be on Tuesday, September 8, 1925, at 2 o'clock.

The Clerk's Calendar is not to be confused with the calendar of cases that have been definitely set for hearing on fixed days.

NOTICE TO APPELLANTS AND PETITIONERS.

No appeal, application or petition will be entertained in connection with which court proceedings are pending or in progress, nor accepted that are not filed within twenty days from the date of the action of the Administrative Official.

Any communication purporting to be an appeal, application or petition shall be regarded as a mere notice of intention to seek relief until it is filed on the form required by the rules of this board.

Upon receipt of any such communication the writer will be supplied with the official forms for presenting his appeal, application or petition, and if he fails to supply the data required thereon, within twenty days, his case may be dismissed for lack of prosecution.

At the time of filing an application, the appellant or petitioner shall forward a signed notice of appeal addressed to the administrative official (either superintendent of buildings or fire commissioner) and file with this board a duplicate of said notice.

Petitioners are advised that their plans must indicate the points of the compass so as to establish the true location and position of the property, the subject of the appeal.

Appeals, applications and petitions will be simplified and expedited by conforming to these directions.

WILLIAM E. WALSH, Chairman.

Negative 0
Absent: Fire Chief Kenlon 1

THE RESOLUTION:

(1360-24-BZ)

WHEREAS, Abraham G. Cohen, vice-president, Liberty Property Corp., owner, filed, November 18, 1924, an application, under the building zone resolution, to permit in a residence district extending from a business district the alteration and extension of an existing building occupied for business purposes; premises 11601 Liberty avenue, Richmond Hill, Queens; and

WHEREAS, applicant has failed to complete his papers, although duly notified so to do.

Resolved, that this application be and it hereby is dismissed for lack of prosecution.

1449-24-BZ.

APPLICANT—Benjamin Ascher, for Johanna Gunther, owner.

SUBJECT—Application (re: order of fire commissioner) to permit in a residence district the maintenance of a garage for the storage of five (5) pleasure motor vehicles, three (3) spaces rented to persons not residing on the premises.

PREMISES AFFECTED—1962 Anthony avenue, The Bronx.

APPEARANCES—

For Applicant: Benjamin Ascher.
For Opposition: William T. Matthies.

ACTION OF BOARD—Application granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison, Holland, Connell and Fire Chief Kenlon 7
Negative 0
Absent 0

THE RESOLUTION:

(1449-24-BZ)

WHEREAS, Benjamin Ascher, for Johanna Gunther, owner, filed, December 9, 1924, an application, under the building zone resolution, to permit in a residence district the maintenance of a garage for the storage of five pleasure motor vehicles; three spaces rented to persons not residing on the premises; premises 1962 Anthony avenue, The Bronx; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its regular meeting July 21, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Anthony avenue and East 178th street are residence districts and Burnside avenue is a business district; and

WHEREAS, the order of the fire commissioner, dated June 14, 1923, in acting on Order No. 18555-C, reads:

"1—Discontinue the maintenance of a garage which is not maintained as an accessory use on these premises."; and

WHEREAS, the existing building is of non-fireproof construction, one story in height, with a frontage of 34 ft. 4 in. and a depth of 36 ft.; located on the rear of the lot, with a driveway leading to the street, and occupied as a garage for five automobiles, three spaces rented to persons not residing on premises; and

WHEREAS, consents of the owners of 34 parcels of affected property were filed by the applicant.

Resolved, that the board of appeals does hereby make a variation in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is granted on condition that the capacity of the garage be limited to four automobiles of the pleasure car type, space for three of which may be rented to persons not residing on the premises; that there shall be no gasoline storage equipment installed; that there shall be no signs of any nature or description displayed on the premises; and that this permission is granted for a temporary period of two years from date of this action by the board.

266-25-BZ.

APPLICANT—Corner, Bell, Russell & McNulty, for Midwood Trust Co., owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a residence district extending from a business district the erection and maintenance of an extension to a bank building.

PREMISES AFFECTED—1144 Flatbush avenue, Brooklyn.

APPEARANCES—

For Applicant: Gardiner Conroy.
For Opposition: Max B. Lesse.

ACTION OF BOARD—Application granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison, Holland, Connell and Fire Chief Kenlon 7
Negative 0
Absent 0

THE RESOLUTION:

(266-25-BZ)

WHEREAS, Corner, Bell, Russell & McNulty, for Midwood Trust Co., owner, filed, March 9, 1925, an application, under the building zone resolution, to permit in a residence district extending from a business district the erection and maintenance of an extension to a bank building; premises 1144 Flatbush avenue, Brooklyn; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its regular meeting July 21, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Flatbush avenue is a business district, Dorchester road and East 21st street are residence districts; and

WHEREAS, the decision of the superintendent of buildings, rendered February 18, 1925, in acting on N. B. App. No. 2077-25, reads:

MINUTES

"Proposition contrary to the Zone Resolution, Art. II, Sec. 3.

"The erection of an extension to a bank extending into a residence district.";

and

WHEREAS, the existing building is of non-fireproof construction, one and three stories in height, with a frontage of 57 ft. 6 in. and a depth of 64 ft. average; the proposed extension is to be of same height, 50 ft. 3 in. by 80 ft. in area, projecting an average depth of approximately 15 ft. into the residence district; to be occupied for banking purposes; and

WHEREAS, the existing structure has been devoted to use as a banking institution for upwards of five years, and the board deemed that applicant has substantiated his basis of appeal under section 7-c and that the requested extension would be a reasonable variation, and cannot adversely affect adjoining properties.

Resolved, that the board of appeals does hereby *make a variation* in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is *granted on condition* that the proposed extension shall be limited to the same height as the existing bank building; that the use and occupancy shall be restricted to the conduct and operation of a banking business authorized under the State or Federal Banking Laws; that the facade shall be finished with the same material, of the same color, texture and design as the existing building; that all permits necessary for the prosecution of the work shall be obtained within nine months and the building completed within eighteen months from the date of this action.

732-24-BZ.

APPLICANT—William F. Doyle, for Abgo Construction Corp., owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles.

THE RESOLUTION:

(399-25-BZ)

WHEREAS, Louis A. Sheinart, for Jonas A. Hagermeyer, owner, filed, April 13, 1925, an application, under the building zone resolution, to permit in a residence and "B" area district the erection and maintenance of a garage for the storage of more than five motor vehicles, also the omission of a rear yard at the 1st and 2nd stories as required by the zone resolution; premises 560-564 West 174th street, Manhattan; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its regular meeting July 21, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that West 174th street and Audubon avenue are residence districts and St. Nicholas avenue is a business district; and

WHEREAS, the decision of the superintendent of buildings, rendered April 2, 1925, in acting on N. B. App. No. 201-25, reads:

"1. Proposed occupancy is contrary to the provisions of Section 3 of the Building Zone Resolution.

"2. Rear yard should be provided as per Sections 12 and 16 of Building Zone Resolution.";

and

WHEREAS, the proposed building is to be of fireproof construction, four stories in height, with a frontage of 75 ft. and a depth of 100 ft. in the 1st and 2nd story and a depth of 90 ft. above; to be occupied as a garage for the storage of more than five motor vehicles; and

MINUTES

WHEREAS, there were no facts adduced to establish his basis of appeal on the ground of hardship, and there was vigorous opposition to the granting of this application on the part of affected property owners.

Resolved, that the decision of the superintendent of buildings be and it hereby is *affirmed*, and that the application be and it hereby is *denied*.

480-25-BZ.

APPLICANT—George V. Martin, for M. J. Martin & Son, Inc., owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a business district extending from an unrestricted district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles.

PREMISES AFFECTED—South side of West 230th street, 110.62 feet east of Exterior street, The Bronx.

APPEARANCES—

For Applicant: Thomas J. Sheridan.

Negative	0
Absent	0

THE RESOLUTION:

(480-25-BZ)

WHEREAS, George V. Martin, for M. J. Martin & Son, Inc., owner, filed, May 6, 1925, an application, under the building zone resolution, to permit in a business district extending from an unrestricted district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles; premises south side of West 230th street, 110.62 ft. east of Exterior street, The Bronx; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its regular meeting July 21, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that West 230th street is a business district, Exterior street is an unrestricted district and Broadway is a business district; and

WHEREAS, the decision of the superintendent of buildings, rendered May 5, 1925, in acting on N. B. App. No. 944-25, reads:

"1. Erection of proposed garage for storage of more than five motor vehicles in business district is contrary to provisions of Building Zone Resolution.";

and

WHEREAS, the proposed building is to be of fireproof construction, two stories in height, with a frontage of 101 ft. 4¾ in. and a depth of 138 ft. 6¾ in. and 153 ft. 6 in., irregular; to be occupied as a garage for the storage of more than five motor vehicles; and

WHEREAS, the applicant justified his basis of appeal under section 7-c of the zoning resolution, and the surrounding properties other than those plots in the unrestricted area will not be adversely affected, and the board deemed that the application also comes within the purview of section 21, hardship, in view of the surrounding uses and conditions.

Resolved, that the board of appeals does hereby *make a variation* in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is *granted on condition* that the building be restricted to two stories above grade and shall be erected fireproof; that the rear wall shall be unpierced unless opening on property within the same ownership; that the front elevation shall be finished in face brick, with architectural

terra cotta or stone trimmings; that all permits necessary for the prosecution of the work shall be obtained within nine months and the building completed within eighteen months from the date of this action.

1437-24-BZ.

APPLICANT—Charles Moscarelli, owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles.

PREMISES AFFECTED—1265-1269 60th street, Brooklyn.

APPEARANCES—

For Applicant: G. R. Foglia.

For Opposition: None.

ACTION OF BOARD—Application granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison, Holland and Fire Chief Kenlon	6
Negative: Mr. Connell	1

THE RESOLUTION:

(1437-24-BZ)

WHEREAS, Charles Moscarelli, owner, filed, December 5, 1924, an application, under the building zone resolution, to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles; premises 1265-67-69 60th street, Brooklyn; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its regular meeting July 21, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that 60th street and Thirteenth avenue are business districts and 59th street is a residence district; and

WHEREAS, the decision of the superintendent of buildings, rendered November 12, 1924, in acting on App. No. 22506-24, reads:

"Proposition contrary to the Zone Resolution, Art. II, Sec. 4. A public garage for more than five motor vehicles in a business district.";

and

WHEREAS, the proposed building is to be of fireproof construction, one story in height, with a frontage of 60 ft. and a depth of 100 ft.; to be occupied as a garage for the storage of more than five motor vehicles; and

WHEREAS, applicant substantiated his basis of appeal under section 7-g by filing 84.4 per cent of consents by affected property owners, and there was no objection by any property owners to the granting of the application, and the board deemed the requested variation a reasonable one under the existing conditions.

Resolved, that the board of appeals does hereby *make a variation* in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is *granted on condition* that the building shall be limited to a one-story structure above grade, and that there shall be no cellar construction other than only sufficient accommodation for a boiler room requirement; that the rear and gable walls shall be unpierced throughout their entire height and length; that the front elevation shall be finished in face brick, with architectural terra cotta or stone trimmings; that there shall be no advertising signs exposed or displayed on the premises, other than one projecting electric sign; that the roof shall be of flat design and construction; and the ventilation be provided with not less than 20 per cent of the roof area equipped with skylights, glazed with plain glass and protected with wire guards above and below; that any gasoline storage equipment installed shall be located at the extreme easterly end of the structure at

MINUTES

the street front; that all permits necessary for the prosecution of the work shall be obtained within nine months and the building completed within eighteen months from the date of this action.

354-25-BZ.

APPLICANT—A. M. Davis, for Herbert M. Metzger and Mrs. Amy M. Lindau, owners.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a residence district the alteration and extension of an existing dwelling to be used for business purposes.

PREMISES AFFECTED—55 East 60th Street, Manhattan.

APPEARANCES—

For Applicant: William F. Doyle, Alice Jones, Meyer Davis and A. M. Davis.

For Opposition: None.

ACTION OF BOARD—Application granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Kennedy, Dowd, Holland and Connell.....	5
Negative: Mr. Gunnison and Fire Chief Kenlon	2
Absent	0

THE RESOLUTION:

(354-25-BZ)

WHEREAS, A. M. Davis, for Herbert M. Metzger, et al., owners, filed, April 1, 1925, an application, under the building zone resolution, to permit in a residence district the alteration of an existing dwelling to be used in part for business purposes; premises 55 East 60th street, Manhattan; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its regular meeting July 21, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that East 60th street is a business district, Park avenue and East 61st street are residence districts; and

WHEREAS, the decision of the superintendent of buildings, rendered March 12, 1925, in acting on Alt. App. No. 423-25, reads:

"1. In a residence district the alteration and use of a residence building for business is unlawful. Building Zone Resolution, Section 6-2.";

and

WHEREAS, the existing building is of non-fireproof construction, four stories and basement in height, with a frontage of 20 ft. and a depth of 69 ft. 1 in.; it is proposed to remove brick piers dividing windows and construct large show windows at basement and 1st story front, also to change the occupancy from a one-family dwelling to stores in basement and 1st story and two families on each of the 2nd, 3rd and 4th stories; and

WHEREAS, an 11-story apartment house immediately adjoining extends beyond the premises under appeal and is built out to the building line, and the owner immediately adjoining to the west, the only remaining building intervening between the residence use influence of Park avenue and business use of 60th street, favored the granting of this appeal, and the board deemed, in view of all the circumstances, that denial of the application would be a hardship.

Resolved, that the board of appeals does hereby make a variation in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is granted on condition that the front elevation of the existing street wall shall remain unchanged; that it shall not be extended forward to the lot line; that the business use shall be restricted to the first two stories,

and shall be limited to the conduct and operation of retail mercantile stores or shops, such as book store, millinery or other light industry of inoffensive and inconspicuous character, and the remainder of the building restricted to dwelling use and occupancy; that there shall be no advertising signs displayed on the front of the building, other than flat metal wall signs; and that there shall be no manufacturing use conducted on the premises; that all permits necessary for the prosecution of the work shall be obtained within nine months and the work of alteration completed within one year from the date of this action.

376-25-BZ.

APPLICANT—Charles H. Richter, for Jane A. Moorehead and Helen G. Moorehead, owners.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a residence district the erection and maintenance of an extension, to be used for store purposes, of an existing building.

PREMISES AFFECTED—310 Second avenue, Manhattan.

APPEARANCES—

For Applicant: Chas. H. Richter and E. Tan-nell.

For Opposition: Thomas J. Sheridan and Julius R. Oltarsh.

ACTION OF BOARD—Application denied.

THE VOTE TO GRANT—

Affirmative	0
Negative: Chairman Walsh, Messrs. Kennedy, Gunnison, Holland, Connell and Fire Chief Kenlon	6
Absent: Mr. Dowd	1

THE RESOLUTION:

(376-25-BZ)

WHEREAS, Charles Richter, for Jane Moorehead, Helen Moorehead and E. Tanell, owners, filed, April 8, 1925, an application, under the building zone resolution, to permit in a residence district the erection of an extension to an existing building and the use of this extension for business purposes; premises 310 Second avenue, northeast corner of East 18th street, Manhattan; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its regular meeting July 21, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Second avenue and East 18th street are residence districts; and

WHEREAS, the decision of the superintendent of buildings, rendered March 31, 1925, in acting on Alt. App. No. 491-25, reads:

"1. Proposed extension unlawful. Art. II, Building Zone Resolution.";

and

WHEREAS, the proposed extension is to be of non-fireproof construction, one story in height, with a frontage of 9 ft. 8 in. and a depth of 20 ft.; to be occupied as a store; and

WHEREAS, there was vigorous objection to the granting of this application on the part of affected property owners, and the both street fronts were otherwise as yet uninvaded, and the board deemed that the applicant was not entitled to the requested extension on any ground of hardship.

Resolved, that the decision of the superintendent of buildings be and it hereby is affirmed, and that the application be and it hereby is denied.

398-25-BZ.

APPLICANT—Louis Allen Abramson, for DeKalb Realty Corporation, owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in an unrestricted district and on a portion of a street between two

MINUTES

intersecting streets, in which portion there exists an exit from or an entrance to a public school, the erection and maintenance of a garage for the storage of more than five (5) motor vehicles.

PREMISES AFFECTED—3655-3663 Third avenue, The Bronx.

APPEARANCES—

For Applicant: Louis Allen Abramson and Milton Mayer.

For Opposition: None.

ACTION OF BOARD—Application denied.

THE VOTE TO GRANT—

Affirmative	0
Negative: Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison, Holland, Connell and Fire Chief Kenlon	7
Absent	0

THE RESOLUTION:

(398-25-BZ)

WHEREAS, Louis Allen Abramson, for DeKalb Realty Corporation, owner, filed, April 13, 1925, an application, under the building zone resolution, to permit in an unrestricted district, on a portion of a street between two intersecting streets, in which portion there exists an exit and entrance to a public school, the erection and maintenance of a garage for the storage of more than five (5) motor vehicles; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its regular meeting July 21, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Third avenue, 169th street and 170th street are unrestricted districts; and

WHEREAS, the decision of the superintendent of buildings, rendered March 19, 1925, in acting on N. B. App. No. 1856-24, reads:

"1. Garage for more than five motor vehicles in unrestricted district on an avenue between two intersecting streets in which exists an entrance or exit from a public school is contrary to the provisions of the Building Zone Resolution.";

and

WHEREAS, the proposed building is to be of non-fireproof construction, one story in height, with a frontage of 115.7 ft. and a depth of 124.01 ft. and 131.08 ft. (irregular); to be occupied as a garage for the storage of more than five motor vehicles; and

WHEREAS, the board deemed that applicant did not substantiate his basis of appeal under hardship, and the proposed garage site is on the same street between two intersecting streets, on which there exists a public school.

Resolved, that the decision of the superintendent of buildings be and it hereby is affirmed, and the application be and it hereby is denied.

1191-23-BZ.

APPLICANT—Nathan Langer, for Commonwealth Savings Bank, owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a residence district the omission of a rear yard required under the zoning resolution. (Previously granted as to use district variation—erection of a garage.)

PREMISES AFFECTED—425-431 West 209th street, Manhattan.

APPEARANCES—

For Applicant: Nathan Langer.

For Opposition: None.

ACTION OF BOARD—Application for modification granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE TO MODIFY RESOLUTION—

Affirmative: Chairman Walsh, Messrs. Kennedy, Dowd, Gunnison, Holland and Connell	6
Negative	0
Absent: Fire Chief Kenlon.....	1

THE RESOLUTION:

(1191-23-BZ)

WHEREAS, Nathan Langer, for Commonwealth Savings Bank, owner, filed, October 21, 1924, an application, under the building zone resolution, to permit in a residence district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles; premises 425-431 West 209th street, Manhattan; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its special meeting February 3, 1925, and regular meeting July 21, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that West 209th street is a residence district, Amsterdam avenue is a business district and Columbus avenue is an unrestricted district; and the area district maps show the premises to be located in a B area district; and

WHEREAS, the decision of the superintendent of buildings, rendered September 24, 1923, in acting on N. B. App. No. 474-23, reads:

"1. Garages not permitted in a residence district.

"5. Provide rear yard in accordance with Art. 4, Building Zone Res.";

and

WHEREAS, the proposed building is to be of non-fireproof construction, one story in height, with a frontage of 100 ft. and a depth of 99 ft. 11 in.; to be occupied as a garage for more than five motor vehicles; and

WHEREAS, variations of the building zone resolution were granted by the board for two similar uses under the same stated facts on this street and the board deemed there would be hardship in preventing applicant from recovering his property, which is now in escrow; and the requested modification as to area district requirements (rear yard) was originally presented, and the applicant through inadvertence neglected to include it in the variation of the zoning law originally sought on this premises and would suffer a hardship if it were denied; and

WHEREAS, this application was granted February 3, 1925, for a variation of the use district requirements, and applicant requested the incorporation into the case of the decision of the superintendent of buildings as to rear yards.

Resolved, that the board of appeals does hereby make a variation in the application of the use and area district regulations of the building zone resolution, and that the application be and it hereby is granted on condition that the building shall be restricted to a one-story structure in height; that the rear and gable walls shall be unpierced throughout their entire height and length; that the front elevation shall be finished in face brick or architectural terra cotta or cement stucco; that there shall be no roof signs erected or maintained and no advertising other than one projecting electric sign on front of building; any gasoline storage equipment installed shall be located at the extreme westerly end of the structure at the street front;

Resolved, further, that all permits necessary for the prosecution of the work shall be obtained within nine (9) months and the building completed within eighteen (18) months from the date of this action.

THE RESOLUTION:

(379-25-BZ)

WHEREAS, Walter Scheminger, owner, filed, April 8, 1925, an application, under the building zone resolution, to permit in a business district the erection and maintenance of a building to be used as a garage for the storage of more than five motor vehicles and also as a motor vehicle repair shop; premises 350-352 Broadway, West New Brighton, Richmond; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its special meeting July 21, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Broadway and Carey avenue are business districts; and

WHEREAS, the decision of the superintendent of buildings, rendered March 25, 1925, in acting on N. B. App. No. 351-25, reads:

"Contrary to Zoning Law to erect a garage and repair shop for more than 5 automobiles in a business use district.";

and

WHEREAS, the proposed building is to be of non-fireproof construction, one story in height, with a frontage of 40 ft.

MINUTES

nd a depth of 120 ft.; to be occupied as a show room, motor vehicle repair shop and garage for the storage of more than five motor vehicles; and

WHEREAS, under the provision of five car garage use on lot in a business district, ten (10) cars could be maintained, and the board deemed in view of the large percentage of consents of adjoining property owners, that two additional cars would not adversely affect the district.

Resolved, that the board of appeals does hereby *make a variation* in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is *granted on condition* that the building shall be limited in height to a one-story structure, to be of flat roof design and construction, and that the Broadway front of the building for a depth of 52 ft. shall be restricted to the use and occupancy of stores or public show room, separated from the garage area, which shall not exceed 8 ft. in depth, by a partition or wall of approved fire resisting masonry, with one opening therein not to exceed 3 ft. 8 in., equipped with a self-closing fireproof door; that the southerly gable wall shall be unpierced throughout its entire height and length; that a rear yard of 5 ft. shall be maintained for the full width of the structure; that openings on the northerly gable wall shall be permitted only *on condition* and only so long as both properties remain in single ownership; that there shall be no gasoline storage equipment permitted or maintained on the premises; and only such minor repairs shall be permitted that are incidental to the conduct of an automobile show room and sales room; and that no motor-driven machinery, other than a portable ½ H. P. drill, shall be permitted, and that the vehicular capacity of the garage area shall be limited to twelve (12) automobiles of the pleasure car type; that the front elevation, other than the plate glass show window, shall be finished with face brick, architectural terra cotta or stone trimmings; the proposed structure to be limited in dimension to 40 ft. frontage, and a depth not exceeding 120 ft., with 7 ft. extension on the front, located 25 ft. from the corner formed by intersection of Cary avenue and Broadway;

Resolved, further, all permits necessary for the prosecution of the work shall be obtained within nine (9) months and the building completed within eighteen (18) months from the date of this action.

335-25-BZ.

APPLICANT—Alfred J. Boulton, for the Stuyvesant Real Estate Co., Inc., owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a business district extending from an unrestricted district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles.

PREMISES AFFECTED—89-99 Granite street, Brooklyn.

APPEARANCES—

For Applicant: Alfred J. Boulton.

For Opposition: Jacob Bausch, Mrs. Culver, J. Daniels, H. Klinenhopper, S. A. Frank, J. J. Ackerman, H. Hinck, C. Grupen and A. Grupen.

ACTION OF BOARD—Report of committee adopted; application denied.

THE VOTE TO ADOPT REPORT OF COMMITTEE—

Affirmative: Chairman Walsh, Messrs. Kennedy, Dowd, Connell, Holland and Fire Chief Kenlon 6
Negative 0
Absent: Mr. Gunnison 1

THE VOTE TO GRANT—

Affirmative: Mr. Dowd 1
Negative: Chairman Walsh, Messrs. Kennedy, Gunnison, Connell, Holland and Fire Chief Kenlon 6
Absent 0

THE RESOLUTION:

(335-25-BZ)

WHEREAS, Alfred J. Boulton, for Stuyvesant Real Estate Co., Inc., owner, filed, March 27, 1925, an application, under the building zone resolution, to permit the extension, from an unrestricted district into a business district, of a proposed garage for the storage of more than five motor vehicles; premises 89-99 Granite street, Brooklyn; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its special meeting July 21, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Granite street is a business district, Evergreen avenue is an unrestricted district and Pilling street is a residence district; and

WHEREAS, the decision of the superintendent of buildings, rendered March 17, 1925, in acting on App. No. 3383-25, reads:

"Proposition contrary to the Zone Resolution, Art. II, Sec. 4a 15. The erection of a public garage for more than five motor vehicles in a business district.";

and

WHEREAS, the proposed building is to be of non-fireproof construction, one story in height, with a frontage of 131 ft. 9¾ in. and a depth of 100 ft. (irregular); to be occupied as a garage for the storage of more than five motor vehicles; and

WHEREAS, the board deemed that the applicant did not establish his basis of appeal under section 21, namely, hardship.

Resolved, that the decision of the superintendent of buildings be and it hereby is *affirmed*, and that the application be and it hereby is *denied*.

338-25-BZ.

APPLICANT—Euell & Euell, for Bernardo Affinito, owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles.

THE RESOLUTION:

(338-25-BZ)

WHEREAS, Euell & Euell, for Bernardo Affinito, owner, filed, March 28, 1925, an application, under the building zone resolution, to permit in a business district the erection and maintenance of a garage for the storage of more than five motor vehicles; premises 1295 Cromwell avenue, The Bronx; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its special meeting July 21, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Cromwell avenue, West 169th street and Boscobel avenue are business districts; and

WHEREAS, the decision of the superintendent of buildings, rendered March 16, 1925, in acting on N. B. App. No. 450-25, reads:

"1. Erection of proposed garage for storage of more

MINUTES

than five motor vehicles in business district is contrary to provisions of Building Zone Resolution.”;

and

WHEREAS, the proposed building is to be of non-fireproof construction, one story in height, with a frontage of 60.61 ft. on Cromwell avenue and 68.37 ft. on West 169th street; to be occupied as a garage for more than five motor vehicles; and

WHEREAS, the board deemed that the applicant did not establish his basis of appeal under section 21, namely, hardship.

Resolved, that the decision of the superintendent of buildings be and it hereby is *affirmed*, and that the application be and it hereby is *denied*.

545-24-BZ.

APPLICANT—Henry I. Perlin, applicant on behalf of Bertha Freitag, owner.

SUBJECT—Application (re: order of fire commissioner) to permit in a residence district the maintenance of a garage for the storage of five (5) pleasure motor vehicles, four (4) spaces rented to persons not residing on the premises.

PREMISES AFFECTED—380 Etna Street, Brooklyn.

APPEARANCES—

For Applicant: Henry I. Perlin.

For Opposition: None.

ACTION OF BOARD—Application granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs.

Dowd, Gunnison, Holland and Connell ... 5

Negative 0

Absent: Mr. Kennedy and Fire Chief Kenlon.. 2

THE RESOLUTION:

(545-24-BZ)

WHEREAS, Henry J. Perlin, for Bertha Freitag, owner, filed, April 16, 1924, an application, under the building zone resolution, to permit in a residence district the maintenance of a garage for the storage of five (5) pleasure motor vehicles; four (4) spaces rented to persons not residing on the premises; premises 380 Etna street, Brooklyn; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its special meeting July 21, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Etna street and Lincoln avenue are residence districts; and

WHEREAS, the order of the fire commissioner, dated March 10, 1924, in acting on Order No. 86956-LC, reads:

“1. Discontinue the maintenance of a garage in which are kept motor vehicles that are subject to charges for storage.

“2. Discontinue the maintenance of a garage in which are kept motor vehicles that are not the property of persons residing in a dwelling on the same lot.”;

and

WHEREAS, the existing building is of non-fireproof construction, one story in height, with a frontage of 57 ft. 6 in. on Etna street and of 13 ft. 7½ in. on Lincoln avenue; and

WHEREAS, applicant has filed 80 per cent of consents of affected property owners in support of his application under section 7-g, and the board deemed the granting of a temporary permit justifiable under all the circumstances.

Resolved, that the board of appeals does hereby *make a variation* in the application of the use district regulations of the building zone resolution, and that the application

be and it hereby is *granted on condition* that the structure be limited in capacity to five automobiles of the pleasure car type, space for four of which may be rented to persons not residing on the premises; that the structure shall not exceed one story in height, limited in area to 13 ft. on Lincoln avenue and 57 ft. 6 in. on Etna street; that there shall be no signs or advertisements of any nature or description displayed on the premises; that there shall be no gasoline storage equipment installed on the premises; and that a temporary use as garage be permitted for a period of two years from the date of this action.

1425-24-BZ.

APPLICANT—William F. Doyle, for Charles Milgrim, lessee.

SUBJECT—Application (re: order of superintendent of buildings) to permit in a residence district the maintenance of a factory use of an existing building.

PPREMISES AFFECTED—231 West 74th street, Manhattan.

APPEARANCES—

For Applicant: William F. Doyle.

For Opposition: Harry Goodstein, Arthur R. Walsh and F. J. Whiton.

ACTION OF BOARD—Application denied.

THE VOTE TO GRANT—

THE RESOLUTION:

(1425-24-BZ)

WHEREAS, William F. Doyle, for Theresa Browning, owner, filed, December 3, 1924, an application, under the building zone resolution, to permit in a residence district the maintenance of a factory use of an existing building; premises 231 West 74th street, Manhattan; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its special meeting July 21, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that West 74th street and West 75th street are residence districts and Broadway is a business district; and

WHEREAS, the order of the superintendent of buildings, dated July 18, 1924, Violation Order No. 3296-24, reads:

“* * * * * in that of conducting a business (factory) in a residence district, contrary to the provisions of the Building Zone Resolution adopted by the Board of Estimate and Apportionment July 25th, 1916.

“You are hereby directed to discontinue the occupancy of the above building as a business (factory) in a residence district, to comply with the Building Zone Resolution.”;

and

WHEREAS, the existing building is of non-fireproof construction, three stories and basement in height, with a frontage of 20 ft. and a depth of 53 ft. Occupied: Basement and 1st story, manufacturing embroidery; 2nd story, millinery; 3rd story, tailoring; and

WHEREAS, the board deemed, in view of the existing and surrounding development, a further invasion of the street would be a hardship and detriment to residence owners.

Resolved, that the decision of the superintendent of buildings be and it hereby is *affirmed*, and the application be and it hereby is *denied*.

400-25-BZ.

APPLICANT—James Kearney, for Barnet Simowitch and Abe Frank, owners.

MINUTES

SUBJECT—Application (re: decision of superintendent of buildings) to permit the alteration and also the conversion of occupancy of a building used as a storage warehouse to a garage for the storage of more than five (5) motor vehicles.

PREMISES AFFECTED—247-249 West 69th street, Manhattan.

APPEARANCES—

For Applicant: James Kearney.

For Opposition: Joseph Jospe and Mr. McEnerney.

ACTION OF BOARD—Application granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Absent: Mr. Dowd and Fire Chief Kenlon 2

THE RESOLUTION:

(400-25-BZ)

WHEREAS, James Kearney, for Barnet Simowitch, owner, filed, April 13, 1925, an application, under the building zone resolution, to permit in a business district the alteration and also the conversion of occupancy of a building used as a storage warehouse, to a garage for the storage of more than five (5) motor vehicles; premises 247-249 West 69th street, Manhattan; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its special meeting July 21, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that West 69th street and Amsterdam avenue are business districts and West 70th street is a residence district; and

WHEREAS, the decision of the superintendent of buildings, rendered April 7, 1925, in acting on Alt. App. No. 633-25, reads:

"1. A garage for more than five cars is unlawful in a business district. Building Zone Resolution, Art. II.

"2. A garage for more than five cars is unlawful within 200 feet from the nearest exit or entrance of a school, or on the same block. Building Zone Resolution, Art. V, Section 21.";

and

WHEREAS, the existing building is of non-fireproof construction, five stories in height, with a frontage of 40 ft. and a depth of 100 ft.; it is proposed to alter building now occupied as a storage warehouse and occupy premises as a garage for the storage of more than five motor vehicles; and

WHEREAS, applicant substantiated with documentary proof and evidence his basis of appeal under section 7-e of the building zone resolution, and the board deemed the granting of this application a reasonable variation and adjustment under the circumstances.

Resolved, that the board of appeals does hereby *make a variation* in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is *granted on condition* that the existing building shall not be increased in area, height or dimensions, but that it shall be converted to a fireproof structure; that a rear yard shall be provided at the 2nd story floor level; that any skylight installed at the roof level of the extension shall be constructed of metal frame with wire glass and fixed louvre ventilator against upper rear wallfi that the openings in the existing rear wall shall not be increased in number and shall be equipped with fixed steel sash and translucent wire glass, with not more than one ventilator to each of said existing openings; that the exterior of the rear wall shall be finished with three coats of light-colored paint, linseed oil and white lead; that the gable walls shall be unpierced throughout their entire height and length; that there shall be no signs on the front of the building, other than one projecting electric sign, indicating the title of the garage; that all permits necessary for the prosecution of the work shall be obtained within nine months and the building completed within eighteen months from the date of this action.

Adjourned 5.30 p. m.

WILLIAM J. O'GORMAN, *Secretary*.

MINUTES

BOARD OF STANDARDS AND APPEALS

*CORRECTION.

The minutes of the meeting of the board of standards and appeals, held Tuesday afternoon, June 24, 1924, as they appeared in Bulletin No. 27, Vol. IX, are hereby corrected to read as follows:

THE RESOLUTION:

(465-24-S)

WHEREAS, Luke Flanagan, for Peter Tessler, lessee, filed, April 1, 1924, a petition, with the board of standards and appeals, for a variation from the requirements of the labor law as cited in a decision of the superintendent of buildings, affecting premises 107 West 48th street, Borough of Manhattan; and

WHEREAS, the decision of the superintendent of buildings, dated March 3, 1924, reads:

"2. No. 3 ft. 0 in. fireproof passageway provided from termination of fire escape.";

and

WHEREAS, the building is non-fireproof, 5 stories in height, 20 ft. by 72 ft. in area on 1st and 2nd stories and 20 ft. by 52 ft. in area above. OCCUPIED as follows: 1st fl., millin-

*Correction—"East" changed to "west" in line 38 and "from" changed to "through" in line 37.

ery store, 3 persons; 2nd fl., showroom and office, 2 persons; 3rd fl., dressmaking, 10 persons; 4th fl., dressmaking, 10 persons; 5th fl., embroidery, 10 persons. EQUIPPED with a fire alarm signal system. EXITS: An interior wooden stairway extending from 1st story to roof, enclosed in fire resisting partitions with fire doors at openings; a 45-degree fire escape on the rear of the building extending from roof to yard, with fireproof windows along the course thereof; with EGRESS from the termination of fire escape by means of doors in fence to adjacent yards and also through adjoining building to street. ROOFS of adjoining buildings are at same level; and

WHEREAS, petitioner contends that consent has been filed with the bureau of buildings for using the adjoining building, No. 109 West 48th street, as egress to street, and further, that the existing means of egress are adequate.

Resolved, that the board of standards and appeals does hereby *make a variation* from the requirements of the labor law and that the petition be and it hereby is *granted*, only so far as it affects the egress from termination of fire-escape, *on condition* that this and adjoining yard shall be maintained free and unobstructed as a single open space; with egress therefrom through next two adjoining buildings to the west; and that petitioner shall obtain the required certificate of occupancy.

Cases listed in the Reserve Calendar are cases upon which action by the board has been deferred pending committee reports, of this board, court or department actions, and will remain thereon until the aforesaid reports, court or departmental actions are consummated. Whereupon the case or cases will be restored to the regular calendar and due notice of the date set for hearing will be mailed to the appellant, applicant or petitioner of record.

FORMS FOR NOTICES TO PROPERTY OWNERS

If applicants, under the building zone resolution, desire copies of Form 13A, for notices to property owners, such forms are not to be supplied by this office.

The applicant is entitled only to one copy of Form 13A, properly filled out.

If he desires additional copies for his own convenience in notifying property owners, he can obtain such copies from The O'Connell Press, 176 Park Row, Manhattan, at three cents each, postage to be added if the forms are to be supplied by mail.

WARNING.

Notice is hereby given to all petitioners, appellants and applicants for relief at the hands of the Board of Standards and Appeals and of the Board of Appeals, and to all lawyers, architects and engineers representing owners or lessees in proceedings before these boards—

First, That if they do not appear in person or by representative at the hearing on their case, dismissal for lack of prosecution is likely to result.

Second, That due and ample notice of the date set for hearing is provided in the publication in this BULLETIN of the calendars of these boards, each case being set down by Calendar Number and premises under the date of the hearing.

Third, That no plea of ignorance of the date of the hearing can be entertained in view of this publication and

of the posting of the calendars on the bulletin board in the offices of the board and of the further publication of the calendars in the daily press.

Fourth, That no one is entitled to written notice of the date for the hearing in his case, and that the plea of failure to receive such notice is no excuse for neglect to appear.

Fifth, That the business of these boards is to dispose of all cases promptly, for the reason that the pendency of an appeal or petition ties the hands of the administrative official in enforcing his order; therefore, no appeal or petition will be allowed to be hung up by reason of failure of the appellant or petitioner to file necessary data, or by any other method of delay.

CONTENTS

This issue of the Bulletin contains, in the order
n—

- Docket.
- Call of Clerk's Calendar.
- The Trial Calendar.
- Notices in Building Zone Cases.
- Minutes of Meeting, Board of Appeals, July 28,
1925.
- Minutes of Meeting, Board of Standards and Ap-
peals, July 28, 1925.
- Corrections.
- Rules.
- Reserve Calendar.
- Progress Report.

DATES AND HOURS OF MEETING.

Board of Appeals, Tuesdays, at 10 a. m.
Special meetings as listed in this Calendar.
Call of Clerk's Calendar, Tuesdays, at 2 p. m.
Board of Standards and Appeals, as listed in the Cal-
endar.
All hearings are held in Room 1013, Municipal Building,
Manhattan.

HOURS FOR CONSULTATION.

10 A. M. to 1 P. M.

Any person desiring to consult the chairman or the en-
gineers, pertaining to the work of either board, will be
seen only between the hours of ten in the morning and one
in the afternoon—Saturdays excepted.

CALL OF CLERK'S CALENDAR.

The Clerk's Calendar consists of applications under the
Building Zone Resolution, and its object is to give inter-
ested property owners opportunity to file objections, if any,
and will be called in Room 1013, Tuesday, September 8,
1925, at 2 o'clock. At this call each case is set for hearing
on a definite day.

The next subsequent Call of the Calendar will be on
Tuesday, September 15, 1925, at 2 o'clock.

The Clerk's Calendar is not to be confused with the
calendar of cases that have been definitely set for hearing
on fixed days.

NOTICE TO APPELLANTS AND PETITIONERS.

No appeal, application or petition will be entertained in
connection with which court proceedings are pending or in
progress, nor accepted that are not filed within twenty
days from the date of the action of the Administrative Of-
ficial.

Any communication purporting to be an appeal, applica-
tion or petition shall be regarded as a mere notice of in-
tention to seek relief until it is filed on the form required
by the rules of this board.

Upon receipt of any such communication the writer will
be supplied with the official forms for presenting his ap-
peal, application or petition, and if he fails to supply the
data required thereon, within twenty days, his case may be
dismissed for lack of prosecution.

At the time of filing an application, the appellant or peti-
tioner shall forward a signed notice of appeal addressed
to the administrative official (either superintendent of build-
ings or fire commissioner) and file with this board a dupli-
cate of said notice.

Petitioners are advised that their plans must indicate the
points of the compass so as to establish the true location and
position of the property, the subject of the appeal.

Appeals, applications and petitions will be simplified and
expedited by conforming to these directions.

WILLIAM E. WALSH, Chairman.

Under the Building Zone Resolution.

NOTICE IS HEREBY GIVEN by the board of appeals a public hearing under the provisions of the building zone resolution, *Tuesday morning, September 8, 1925, at 10 o'clock, in Room 1013, Municipal Building, on the following matters:*

NO. 1502-24-BZ—Application, December 22, 1924, under the building zone resolution, of William F. Doyle, applicant, on behalf of Morris Pomerantz, owner, to permit in a business district extending from an unrestricted district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles; premises east side of New York avenue, 185.92 ft. north of South street, Jamaica, Borough of Queens.

NO. 286-25-BZ—Application, March 12, 1925, under the building zone resolution, of William B. Seaver, applicant, on behalf of Third Avenue Railway Company, owner, to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles; premises 2526-30 Amsterdam avenue, southwest corner of West 186th street, Manhattan.

NO. 289-25-BZ—Application, March 13, 1925, under the building zone resolution, of William F. Doyle, applicant, on behalf of Max

Zaubler, owner, to permit partly in a business district and partly in a residence district the erection and maintenance of an extension to an existing garage for the storage of more than five (5) motor vehicles; premises 553-559 11th street, Brooklyn.

CAL. NO. 304-25-BZ—Application, March 19, 1925, under the building zone resolution, of Jamaica Water Supply Co., applicant and owner, to permit in a residence district the erection and maintenance of a business building to be used as a water pumping station; premises west side of 143rd street, 100 ft. south of 111th avenue, Jamaica, Borough of Queens.

CAL. NO. 305-25-BZ—Application, March 19, 1925, under the building zone resolution, of Jamaica Water Supply Co., applicant and owner, to permit in a residence district the erection and maintenance of a business building to be used as a water pumping station; premises west side of 224th street, 250 ft. north of Foch boulevard (Central avenue), Jamaica, Borough of Queens.

CAL. NO. 411-25-BZ—Application, April 16, 1925, under the building zone resolution, of William F. Doyle, applicant, on behalf of B. Martin, owner, to permit in a residence district the maintenance of a dancing and banquet hall; premises 1134 Pacific street, Brooklyn.

CAL. NO. 577-25-BZ—Application, June 4, 1925, under the building zone resolution, of Bandler, Haas and Collins, applicants, on behalf of 212 West 72nd Street Corp., owner, to permit in a residence and "B" area district extending from a business district, the alteration and extension of a building to be used in part for business purposes, also the omission of a rear yard as required by the building zone resolution; premises 212 West 72nd street, Manhattan.

CAL. NO. 737-25-BZ—Application, July 14, 1925, under the building zone resolution, of Frank S. Parker, engineer, on behalf of 598 Eighth Avenue Corporation, lessee, Shapp Realty Co., owner, to permit in a 1½ times district the erection and maintenance of the street walls to a height exceeding the limit required by the building zone resolution; premises 594-598 Eighth avenue and 270-274 West 39th street, Manhattan.

CAL. NO. 331-25-BZ—Application, March 26, 1925, under the building zone resolution, of R. Thomas Short, architect, on behalf of Michael Noonan, owner, to permit partly in a business district and partly in a residence district the alteration and extension of an existing garage for the storage of more than five (5) motor vehicles; premises 187A-201 Garfield place, Brooklyn.

CAL. NO. 610-25-BZ—Application, June 12, 1925, under the building zone resolution, of John E. Joyce, applicant and owner, to permit the conversion from a residence to a business use (stores) of the first story of a building located partly in a resi-

CALENDAR

dence and partly in a business use district; premises 201 East 198th street, The Bronx.

CAL. NO. 626-25-BZ—Application, June 17, 1925, under the building zone resolution, of New York Telephone Company, applicant and owner, to permit in a residence use, C and E area district, the extension in height and area of an existing central telephone exchange building; premises 1421-1437 Ocean avenue and 1060-1068 Kenmore place, Brooklyn.

CAL. NO. 241-25-BZ—Application, February 28, 1925, under the building zone resolution, of Philip J. Sinnott, applicant, on behalf of Bro-lux Corp., owner, to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles; premises 1202-1206 Lind avenue, The Bronx.

WILLIAM E. WALSH, *Chairman.*

BOARD OF APPEALS.

SPECIAL MEETING.

Tuesday, September 8, 1925, at 2 p. m.

Appeals from Administrative Orders.

785-24-A—6118 Rockaway Beach boulevard, Arverne, Queens.

THE RESOLUTION:

(1370-24-A)

WHEREAS, U. S. E. Corporation, lessee, filed, November 19, 1924, an appeal, with the board of appeals, from a decision of the fire commissioner, affecting premises 296-322 Vernon avenue, Borough of Queens; and

WHEREAS, the decision of the fire commissioner, Mt. App. No. 2421-24, dated November 12, 1924, reads:

"1. Burner must be of a type approved by the Board of Standards and Appeals."

and

WHEREAS, the building is non-fireproof, one story in height, 162 ft. by 200 ft., irregular in area; OCCUPIED for the manufacture of auto bumpers; and

WHEREAS, it is proposed to install a fuel oil burning system, consisting of a 1,500-gallon fuel oil tank, a Viking pump, Tate-Jones burners and the necessary valves and piping; to be used for the heat treatment of metal; and

WHEREAS, this appeal was granted by the board at its meeting April 14, 1925, for a temporary period, and appellant requested an extension of the time limit set.

Resolved, that the decision of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted*, restricting the use and operation of the burner to industrial operation of annealing and metal treating furnaces, including the use of the Viking pump, *on condition* that all moving parts of the pump in contact with the oil shall be of bronze or brass; that the fuel oil installation otherwise throughout shall comply with the fuel oil rules of the board of standards and appeals; and that all necessary permits shall be obtained within ninety (90) days from date of this action.

182-25-A.

APPELLANT—The Surface Combustion Co., for Fidelity Metal Co., owner.

SUBJECT—Application for extension of permit—re appeal from decision of fire commissioner.

PREMISES AFFECTED—East side of Ranton street, corner Newtown Creek, Brooklyn.

APPEARANCES—None.

ACTION OF BOARD—90-day extension of permit granted, at owner's risk.

THE VOTE—

Affirmative: Chairman Walsh, Messrs.

Dowd, Gunnison, Holland and Connell.. 5

Negative 0

Absent: Mr. Kennedy and Fire Chief Kenlon 2

THE RESOLUTION:

(182-25-A)

WHEREAS, the Surface Combustion Company, for Fidelity Metal Company, owner, filed, February 13, 1925, an appeal, with the board of appeals, from a decision of the fire commissioner, affecting premises east side of Ranton street, corner Newtown Creek, Brooklyn; and

WHEREAS, the decision of the fire commissioner, rendered March 3, 1925, in acting on Alteration Application No. 2782-24, reads:

"1. Burners must be of a type approved by the Board of Standards and Appeals."

and

WHEREAS, the premises consist of a plot of ground upon which is located the plant of the Fidelity Metal Company, consisting of a one-story fireproof building, 97 ft. by 288 ft. in area; OCCUPIED for smelting metal; and

WHEREAS, a fuel oil burning system has been installed consisting of two 10,000-gallon fuel oil storage tanks, located on concrete piers at a distance of 50 ft. from the nearest building, surface combustion burners and the necessary valves, pumps and piping to make a complete installation; and

WHEREAS, appellant requests a temporary permit pending an inspection of the burner; and

WHEREAS, this appeal was granted by the board at its meeting April 21, 1925, for a temporary period, and appellant requested an extension of the time limit set.

Resolved, that the decision of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted*, for a period of 90 days, at owner's risk, pending determination by the board of standards and appeals on petition now before it.

578-25-A.

APPELLANT—Samuel Rosenblum, for Kny Scheerer Corp. of America, owner.

SUBJECT—Appeal from order of fire commissioner.

PREMISES AFFECTED—119-125 Seventh avenue, Manhattan.

MINUTES

APPEARANCES—

For Appellant: L. B. Angelo.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Appeal granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs.

Dowd, Gunnison, Holland and Connell.. 5

Negative 0

Absent: Mr. Kennedy and Fire Chief Kenlon 2

THE RESOLUTION:

(578-25-A)

WHEREAS, Samuel Rosenblum, for Kny Scheerer Corp. of America, owner, filed, June 4, 1925, an appeal, with the board of appeals, from an order of the fire commissioner, affecting premises 119-25 Seventh avenue, Manhattan; and

WHEREAS, the order of the fire commissioner, dated August 14, 1924, reads:

"1. Install a standpipe system with risers 4 in. in diameter, tested to withstand a pressure of 300 lbs. per square inch, extending from cellar to roof, with necessary check valves and 2½ in. regulation fire department outlets on each story (including basements, cellars and roofs), placed within main stairway enclosure. Each outlet to be provided with 75 ft. of 2½ in. standard hose attached thereto." ;

and

WHEREAS, the building is non-fireproof, five (section "C" being six) stories in height; irregular in area; having a frontage of 103 ft. on Seventh avenue and a frontage of 257 ft. 6 in. on West 17th street, subdivided into five sections—A, B, C, D and E (there being also two one-story extensions)—by brick walls, with openings therein on each story; openings protected by sub-standard fire doors, excepting at the opening between sections C and D, where the opening is protected by regulation automatic fire doors; the approximate areas of the individual sections being: A, 2,000 sq. ft.; B, 3,700 sq. ft.; C, 1,900 sq. ft.; D, 3,700 sq. ft.; E, 1,700 sq. ft., and the total area of the one-story extensions being 2,200 sq. ft., the total area of the entire premises being 15,200 sq. ft.; OCCUPIED for the manufacture of metal surgical instruments, 104 persons above the 1st story, the 6th story being used for storage purposes, no occupancy; EQUIPPED with a sprinkler system; and

WHEREAS, appellant contends that the premises is divided into two sections by the standard fire doors at the openings in the division wall between sections D and C; that the excess area (lying to the west of section D) is only 200 sq. ft. in excess of 10,000 sq. ft. and that the section of the premises lying to the west of section D is further subdivided by brick walls with sub-standard fire doors at the openings therein.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted on condition* that the existing sprinkler system shall be maintained, with central office connection; that the floor areas as now subdivided shall not be increased or altered; that the openings in dividing partition walls shall be protected on both sides with either automatic fire doors or self-closing fireproof doors; and *granted* only so long as conditions as to use, occupancy and operation shall remain unchanged.

349-25-A.

APPELLANT—Edward P. Doyle, for Estate of J. Amory Haskell, owner.

SUBJECT—Appeal from order of fire commissioner.

PREMISES AFFECTED—210 East 63rd street, Manhattan.

APPEARANCES—

For Appellant: Edward P. Doyle.

For Administration: Inspector Lynch of fire department.

ACTION OF BOARD—Appeal granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs.

Dowd, Gunnison, Holland and Connell.. 5

Negative 0

Absent: Mr. Kennedy and Fire Chief Kenlon 2

THE RESOLUTION:

(349-25-A)

WHEREAS, Edward P. Doyle, for Estate of J. Amory Haskell, owner, filed, April 1, 1925, an appeal, with the board of appeals, from an order of the fire commissioner, affecting premises 210 East 63rd street, Manhattan; and

WHEREAS, the order of the fire commissioner, dated February 25, 1925, reads:

"You are hereby notified that an inspection of premises 210 East 63rd Street, Borough of Manhattan, used as a non-storage garage, shows that the following must be done before permit requested by you can be issued:

"1. Discontinue the use of living apartments on 4th story as dwelling purposes. Section 154, Chapter 10, Code of Ordinances." ;

and

WHEREAS, the building is non-fireproof, four stories in height, 25 ft. by 60 ft. in area. OCCUPIED: Cellar, boiler room; 1st story, private garage for 4 cars; 2nd story, household storage; 3rd and 4th stories, dwelling; and

WHEREAS, appellant contends that the garage floor is separated from the remainder of the building by fireproof walls and ceiling; that the means of egress for the occupants of the upper stories are adequate; that said occupants are employees of the owner of the premises, and the conditions as to occupancy and use have been the same for the past twelve years.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted*, only so long as the use and occupancy of garage shall remain in private ownership and operation, *on condition* that a fire escape shall be maintained on rear of building, with a drop ladder to the yard from lowest balcony, egress from this yard to yard of adjoining premises at the west; and that there shall be no gasoline storage equipment maintained on premises.

213-21-A.

APPELLANT—Frederick Loeser & Co., Inc., lessee, for B. O. S. Realty Co., owner.

SUBJECT—Appeal from order of fire commissioner.

PREMISES AFFECTED—125-137 Navy street, 236-242 Johnson street and 64-66 Raymond street, Brooklyn.

APPEARANCES—

For Appellant: Edward P. Doyle.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Appeal granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs.

Dowd, Gunnison, Holland, Connell and

Fire Chief Kenlon 6

Negative 0

Absent: Mr. Kennedy 1

THE RESOLUTION:

(213-21-A)

WHEREAS, Frederick Loeser & Co., Inc., lessee, for B. O. S. Realty Co., owner, filed, March 14, 1921, an appeal, with the board of appeals, from orders of the fire commissioner, affecting premises 125-137 Navy street, 236-242 Johnson street and 64-66 Raymond street, Brooklyn; and

WHEREAS, the orders of the fire commissioner read:

"Order No. 18038-F: Provide iron or kalameined shutters at all openings in the exterior wall above first story which are distant in a direct line less than 30 ft. from any opening in any other building and not in the

MINUTES

same plane with said openings and which are not more than 50 ft. above a neighboring roof at east side of building, or other approved protection, as per Sec. 375, article 18, chapter 5 of the Code of Ordinances."

"Order No. 18040-F: Provide a separate and distinct system of *automatic sprinklers* throughout building having at least one source of water supply arranged and equipped as provided in the rules for fire extinguishing appliances adopted by the Board of Standards and Appeals May 24, 1917, as amended May 2, 1918, and January 21, 1919, effective February 17, 1919."

"Order No. 18041-F: Install a standpipe system with risers 4 inches in diameter, tested to withstand a pressure of 300 lbs. per square inch, extending from cellar to roof, with necessary check valves and 2½-inch regulation Fire Department outlets on each story, including basements, cellars and roofs, placed within main stairway enclosure. Each outlet to be provided with sufficient feet of 2½-inch standard hose attached thereto."

WHEREAS, the building is non-fireproof, four stories in height, divided into three sections by brick partition walls; OCCUPIED in the 1st story, storage, receiving and shipping, 10 persons; 2nd story and 3rd story, storage of furniture, 1 person; 4th story, repairing and refinishing furniture, 24 persons; the means of egress consisting of an interior stairway in the southwesterly section, extending from the 1st story to the 4th story, with scuttle and ladder to roof, enclosed in wood partitions covered on loft side with metal, with metal covered doors at openings, a similar stairway in the southeast section; a fire escape on the Johnson street front of the building and a fire escape on the Navy street front of the southerly section; there are windows in the easterly wall which are within 50 ft. of the roof of adjoining building on Johnson street; and

WHEREAS, appellant contends that the adjoining buildings constituting exposure are three-story brick tenements, the roofs of which are covered with metal, and that the fire risk is small, and that the floor area of any section of the building does not exceed 10,000 sq. ft., and proposes to install automatic fire doors at both sides of all openings in the division walls; in regard to the sprinkler system and standpipes, appellant contends that only a limited stock of material is kept on hand, that the housekeeping conditions are exceptionally good and that the proposed complete separating of the building into sections ought to eliminate this order; and

WHEREAS, this appeal was granted by the board April 5, 1921, in so far as it applies to Order No. 18041-F, relative to standpipe requirements, on condition that automatic fireproof doors be installed on both sides of all openings in the division walls; denied as to Orders Nos. 18038-F and 18040-F relative to fire shutters and sprinklers; and

WHEREAS, the owner through his representative, Mr. Edward P. Doyle, requests a modification of the resolution so as to be relieved of installing fireproof doors, also of complying with Order No. 18041-F, on the ground that all other fire department orders have been complied with; he contends that the installation of a sprinkler system and the compliance with all other fire department orders renders the standpipe requirement unnecessary; and further contends the fire protection is now adequate.

Resolved, that the resolution of April 5, 1921, be and it hereby is *modified*, and the appeal for modification as to openings be and it hereby is *granted on condition* that horizontal openings above 1st story between sections A and C shall not exceed a width of 5 ft. 6 in. or a height of 6 ft. and shall be equipped with a pair of self-closing tin-clad Underwriters' doors.

THE RESOLUTION:

(356-25-A)

WHEREAS, Edward P. Doyle, for Annie L. Horn, owner, filed, April 1, 1925, an appeal, with the board of appeals, from a decision of the superintendent of buildings, affecting premises 628 Lexington avenue, Manhattan; and

WHEREAS, the decision of the superintendent of buildings, rendered December 8, 1924, reads:

"Exit Order No. 257-24:

"You are hereby notified that the building situate on the front of the lot on the west side of Lexington Avenue commencing about 57.5 feet from the southwest corner of 54th street and Lexington avenue, being a basement 3 story non-fireproof building about 20 feet front, 20 feet rear, 60 feet deep and 40 feet in height, and occupied as a mixed occupancy and known as number 628 Lexington avenue in the Borough of Manhattan, in the city of New York and does not conform to section 161 of the Building Code, in the respects noted below:

"You are hereby directed to enclose the interior stairway on south side of building in partitions of fire resisting material, partitions to be fire stopped between floor beams, also provide self-closing fireproof doors on all openings on stair enclosure with kalamein trim, also make all fixed sash in stair enclosure metal or kalameined frames and wire glass."

and

WHEREAS, the building is non-fireproof, three stories and basement (40 ft.) in height, 20 ft. by 60 ft. in area. OCCUPIED: Basement, store, 1 person; 1st story, fitting (clothing), room and also furnished room, 2 persons; 2nd story, workroom, 2 persons, and also furnished room; 3rd story, 4 furnished rooms. EXITS: One wooden stairway, enclosed in wood stud, lath and plaster partitions, extending from 1st to top story; and

WHEREAS, appellant contends that the maximum occupancy of the premises is ten persons (three being engaged in factory work), and that the existing means of exit are adequate.

Resolved, that the decision of the superintendent of buildings be and it hereby is *modified*, and the appeal be and it hereby is *granted on condition* that a fire escape shall be provided on the rear of building, with connecting stairs of not less than 60 degrees; and *granted* so long as present occupancy and use remain substantially unchanged.

Kenlon 5
Negative 0
Absent: Messrs. Kennedy and Gunnison... 2

THE RESOLUTION:

(360-25-A)

WHEREAS, Samuel Rosenblum, for Max Biegelman, owner, filed, April 2, 1925, an appeal, with the board of appeals, from an order of the fire commissioner, affecting premises No. 695 Atlantic avenue, Borough of Brooklyn; and

WHEREAS, the order of the fire commissioner, dated May 10, 1924, reads:

"4. Separate boiler from remainder of building by unpierced wall of solid masonry at least 8 inches in thickness. Entrance to boiler room to be from exterior of building only. Sec. 159-1, Ch. 10, Code of Ordinances.";

and

WHEREAS, the building is non-fireproof, three stories in height, 20 ft. by 74 ft. in area at 1st story and 20 ft. by 45 ft. in area above. OCCUPIED: 1st story, auto repair shop and gasoline selling station and boiler room; 2nd and 3rd stories, dwellings; and

WHEREAS, appellant contends that the gasoline station is completely separated from the rest of the building and the only entrance therein leads directly from the street, and that the boiler room (containing a small hot water boiler) is separated from the remainder of the building by a brick wall with a metal covered sliding door in an opening therein; and contends further that, inasmuch as the owner has had previous permits from the fire department, and a certificate of occupancy from the building department, that the existing conditions be accepted.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted on condition* that the one-story extension shall be separated from main building by a brick wall of approved masonry with not more than one opening 3 ft. by 6 ft. 6 in. therein, equipped with self-closing, fireproof door; that the gasoline storage equipment maintained on premises shall be enclosed with walls of approved masonry, located at front of building opening directly to street, with no opening there-to on interior of premises; and that the ceiling of 1st floor throughout shall be fire-retarded with plaster board and metal.

THE RESOLUTION:

(390-25-A)

WHEREAS, Superb Bronze & Iron Company, lessee, filed, April 11, 1925, an appeal, with the board of appeals, from an order of the fire commissioner, affecting premises 3064-3088 Atlantic avenue, Brooklyn; and

WHEREAS, the order of the fire commissioner, dated March 21, 1925, reads:

"You are hereby notified that an inspection of the above premises, used for the storage of fuel oil, shows

that the following must be done before permit requested by you can be issued:

"1. Install a 4 in. standpipe system in accordance with the requirements of Section 581, Ch. 5, Code of Ord." and

WHEREAS, the building is non-fireproof, one story in height, having a frontage of 202 ft. on Atlantic avenue, 80 ft. on Berriman street and 80 ft. on Shepherd avenue; a total area of approximately 15,500 sq. ft.; OCCUPIED for the manufacture of ornamental bronze work, 50 persons; and

WHEREAS, appellant contends that the building is low in height, faces on three streets and that large windows on all sides make the premises accessible from the street; that there are fire hydrants in the immediate vicinity.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted*, so long as present conditions as to use, occupancy and operation shall remain unchanged.

THE RESOLUTION:

(372-25-A)

WHEREAS, John De Hart, for Ellanbee Enterprises, Inc., owner, filed, April 6, 1925, an appeal, with the board of appeals, from an order of the fire commissioner, affecting premises 2343 Hughes avenue, Borough of Bronx; and

WHEREAS, the order of the fire commissioner, dated April 2, 1925, reads:

"Order No. 65-A:

"1. Install standpipe system in accordance with the requirements of Article 25, Chapter 5, Code of Ordinances, and the regulations of the Board of Standards and Appeals.";

and

WHEREAS, the building is fireproof, one story in height, having a frontage of 87 ft. 6 in. on East 186th street and a frontage of 100 ft. on Hughes avenue; OCCUPIED as a motion picture theatre, having a seating capacity of 1,141; and

WHEREAS, appellant contends that the premises is provided with thirteen 5-foot exits; that there is no stage or dressing room, and contends further that there is a city fire plug on the Hughes avenue front within 25 ft. of the rear exit and another city fire plug directly across the street from the premises on East 186th street, said plug being 40 ft. from the main entrance of the theatre.

Resolved, that the order of the fire commissioner be and it hereby is *affirmed*, and the appeal be and it hereby is *denied*.

THE RESOLUTION:

(439-25-A)

WHEREAS, Socony Burner Corporation, for Harriet B. Folger, owner, filed, April 23, 1925, an appeal, with the board of appeals, from a decision of the fire commissioner, affecting premises 552 4th street, Brooklyn; and

WHEREAS, the decision of the fire commissioner, rendered March 14, 1925, reads:

"26. Burners must be of a type approved by the Board of Standards and Appeals."

WHEREAS, the building is non-fireproof, three stories and basement in height, 40 ft. by 100 ft. in area; OCCUPIED as a one-family residence; and

WHEREAS, application has been submitted to the fire commissioner for approval to install a fuel oil burning system for heating purposes, in which it is proposed to use the Socony Arrow Burner; and

WHEREAS, the appellant contends the installation conforms to law in all respects except as to burner; that the burner proposed to be used is now before the board for approval; he requests the board to grant a 90-day permit to use the Socony Arrow Burner, pending the action of the board.

Resolved, that the decision of the fire commissioner be and it hereby is modified, and the appeal be and it hereby is granted, for a temporary period of ninety (90) days, pending the determination of the board of standards and appeals on petition for approval of the Socony Arrow Burner, on condition that the fuel oil burning equipment and installation otherwise shall comply with the fuel oil rules in all respects.

THE RESOLUTION:

(371-25-BZ)

WHEREAS, William Weintraub, for R A R Realty Corp.,
owner, filed, April 6, 1925, an application, under the building
zone resolution, to permit in a business district the erection
and maintenance of a building to be used for dry cleaning;
premises 428-432 Cherry street, Manhattan; and

WHEREAS, a public hearing was held on this application
by the board of appeals, at its regular meeting, July 28,
1925, after due notice by publication in the Bulletin of the
Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the build-
ing zone resolution show that Cherry street is an unrestricted
district and Monroe street is a business district; and

WHEREAS, the decision of the superintendent of buildings,
rendered March 16, 1925, in acting on N. B. App. No. 150-
25, reads:

"1. Use of building for dyeing or dry cleaning is
unlawful in a business district. Zoning Resolution—II.";
and

WHEREAS, the proposed building is to be of fireproof
construction, one story in height, with a frontage of 25 ft.
and a depth of 14 ft.; to be occupied as a tumbler house
in a dry cleaning establishment, a portion of the structure,
approximately 10 ft. in depth, extending into the business
district of Monroe street; and

WHEREAS, the board deems the provisions of use district
exceptions under section 7a, 7b and 7c fully covers this
appeal and supports a reasonable adjustment to permit the
10-foot extension requested from an unrestricted district into
a business district.

Resolved, that the board of appeals does hereby make a
variation in the application of the use district regulations

of the building zone resolution, and that the application be
and it hereby is *granted on condition* that the proposed ex-
tension shall be restricted to a one-story structure, without
cellar; that the rear and gable walls shall be unpierced
throughout their entire height and length; that the use of
the structure shall be limited to the operation of two metal
tumblers used in the conduct of the business, and that there
shall be no benzine, naphtha or other inflammable fluid stored
or used in this portion of plant.

291-25-BZ.

APPLICANT—Hollywood Garage Corp., owner.

SUBJECT—Application (re: decision of superintendent
of buildings) to permit in a business district the
alteration and enlargement of a garage for the
storage of more than five (5) motor vehicles.

PREMISES AFFECTED—238-244 East 64th street and
1207-1209 Second avenue, Manhattan.

APPEARANCES—

For Applicant: John A. Mullin.

For Opposition: Harry A. Leigh, Raymond
Burdick and R. O'Brien.

ACTION OF BOARD—Application granted on condi-
tion.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs.
Dowd, Gunnison, Holland and Connell 5
Negative: Fire Chief Kenlon..... 1
Absent: Mr. Kennedy 1

THE RESOLUTION:

(291-25-BZ)

WHEREAS, Hollywood Garage Corp., Ewen Duff, presi-
dent, owner, filed, March 16, 1925, an application, under the
building zone resolution, to permit in a business district the
alteration and enlargement of a garage for the storage
of more than five (5) motor vehicles; premises 238-244 East
64th street and 1207-9 Second avenue, Manhattan; and

WHEREAS, a public hearing was held on this application
by the board of appeals, at its regular meeting, July 28,
1925, after due notice by publication in the Bulletin of the
Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the build-
ing zone resolution show that East 64th street, Second ave-
nue and East 63rd street are business districts; and

WHEREAS, the decision of the superintendent of buildings,
rendered February 24, 1925, in acting on Alt. App. No. 278-
25, reads:

"1. Proposed enlargement of building is unlawful—
Sections 6a and 21 of Building Zone Resolution.";
and

WHEREAS, the existing building is of non-fireproof con-
struction, one story in height, with a frontage of 105 ft.
and a depth of 125 ft. 5 in.; occupied as a garage for more
than five motor vehicles; it is proposed to increase the
height of the structure to two stories, the proposed 2nd
story to have a depth of 100 ft.; and

WHEREAS, the board deemed the appeal under hardship
justifies a limited alteration and enlargement of the existing
public garage, together with the non-conforming uses already
in existence on this street front.

Resolved, that the board of appeals does hereby make a
variation in the application of the use district regulations
of the building zone resolution, and that the application be
and it hereby is *granted on condition* that the building shall
be restricted to a two-story structure; that an additional
exit, approximately in the center of the building, be pro-
vided for the 1st story on the Second avenue front; that
the vehicular entrance for the proposed additional story shall
be located at the extreme southerly end of the building at
the Second avenue front; that the rear and gable walls of
the proposed additional story shall be unpierced throughout
their entire height and length; that the ceiling shall be fire-
retarded in accordance with the rules of the board of stand-
ards and appeals; that the entire Second avenue front other-
wise shall be restricted and conducted for a depth of not

MINUTES

less than 20 ft. for retail stores; and that all permits necessary for the prosecution of the work shall be obtained within nine months and the work completed within one year from the date of this action.

84-25-BZ.

APPLICANT—Richard J. Cullinan, for John H. Hayes, owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles.

PREMISES AFFECTED—547-551 West 133rd street, Manhattan.

APPEARANCES—

For Applicant: Richard J. Cullinan.

For Opposition: Mrs. Fischer, Dora Meyer and David Jones.

ACTION OF BOARD—Application granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Dowd, Gunnison, Holland, Connell and

Fire Chief Kenlon 6

Negative 0

Absent: Mr. Kennedy 1

THE RESOLUTION:

(384-25-BZ)

WHEREAS, Richard Cullinan, for John Hayes, owner, filed, April 8, 1925, an application, under the building zone resolution, to permit in a business district the erection and maintenance of a garage for the storage of more than five motor vehicles, and also the omission of a rear yard as provided by the zone resolution; premises 547-551 West 133rd street, Manhattan; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its regular meeting, July 28, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Broadway is an unrestricted district, West 133rd street is a business district and West 134th street is a residence district; and

WHEREAS, the decision of the superintendent of buildings, rendered March 27, 1925, in acting on N. B. App. No. 139-25, reads:

"1. Garage for more than five cars not permitted in a business district, Art. 2, Building Zone Res.

"2. Provide rear yard in accordance with Art. 4, Bldg. Zone Res.;"

and

WHEREAS, the proposed building is to be of non-fireproof construction, two stories in height, with a frontage of 75 ft. and a depth of 99 ft. 11 in.; to be occupied as a garage for more than five motor vehicles; and

WHEREAS, the board deemed it would be a hardship to deny this application, in view of the fact that a similar application for this site was granted by this board in 1917 and lapsed only through failure to construct and expiration of permit limitation; also, because similar non-conforming uses abut the property in question.

Resolved, that the board of appeals does hereby make a variation in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is granted on condition that the structure be limited to a two-story building above grade; that a rear yard be maintained at the grade of the 2nd story floor level of not less than 10 ft. in least dimension for entire width of floor; that the roof of said extension be equipped with steel frame and wire glass skylight, ventilated with fixed louvre against the rear wall; that the rear and gable walls of the 1st story, and the gable walls of the 2nd story extension shall be unpierced throughout their entire height and length; that any openings in the 2nd story rear wall shall be equipped with fixed steel sash and wire glass and

shall have not more than one ventilator to each sash; that there shall be not more than one vehicular entrance located at the extreme westerly end of the street front; that any gasoline storage equipment installed shall be located at the street wall at the westerly end of the structure; that the front elevation shall be finished in face brick with architectural terra cotta or stone trimmings; that there shall be no advertising signs erected or displayed other than one projecting electric sign at the westerly end of the structure at the street front, limited to title of garage; that all permits necessary for the prosecution of the work shall be obtained within nine months and the building completed within eighteen months from the date of this action.

1421-24-BZ.

APPLICANT—John J. Dunnigan, for Elliott Place Holding Co., owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a residence district extending from a business district the erection and maintenance of a business building. (Previously denied by the board.)

PREMISES AFFECTED—Southeast corner of Jerome avenue and Elliott place, The Bronx.

APPEARANCES—

For Applicant: John J. Dunnigan.

For Opposition: Louis Fein.

ACTION OF BOARD—Application granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs.

Dowd, Gunnison, Holland, Connell and

Fire Chief Kenlon 6

Negative 0

Absent: Mr. Kennedy 1

THE RESOLUTION:

(1421-24-BZ)

WHEREAS, John J. Dunnigan, for Elliott Place Holding Co., owner, filed, December 2, 1924, an application, under the building zone resolution, to permit the extension, from a business district into a residence district, of a proposed building to be used for business purposes; premises southeast corner of Jerome avenue and Elliott place, The Bronx; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its regular meeting, July 28, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Jerome avenue is a business district and Elliott place is a residence district; and

WHEREAS, the decision of the superintendent of buildings, rendered November 18, 1924, in acting on N. B. Application No. 2853-24, reads:

"Erection of proposed building for business uses in business district extending into residence district is contrary to provisions of Building Zone Resolution.;"

and

WHEREAS, the proposed building is to be of non-fireproof construction, one story in height, with a frontage of 106 ft. 9 in. on Jerome avenue and 112 ft. 7 in. on Elliott place; to be occupied as stores; and

WHEREAS, applicant stated that no part of the premises would be used for garage purposes and offered to eliminate the driveway, the board deemed the granting of this application a reasonable adjustment under the provisions of the building zone resolution use district exception.

Resolved, that the board of appeals does hereby make a variation in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is granted on condition that the proposed structure shall be confined to the dimensions indicated on the plans filed in this case; that there shall be no garage use or occupancy maintained on the premises; that there

MINUTES

shall be no advertising signs erected or maintained within the residence area of the plot; and that all permits necessary for the prosecution of the work shall be obtained within six months and the work completed within nine months from the date of this action.

412-25-BZ.

APPLICANT—William F. Doyle, for Rosie Kellner, owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a residence district the erection and maintenance of an apartment house, the first story to be used for store purposes.

PREMISES AFFECTED—840 Washington avenue, Brooklyn.

APPEARANCES—

For Applicant: William F. Doyle.

For Opposition: None.

ACTION OF BOARD—Application denied.

THE VOTE TO GRANT—

Affirmative 0

Negative: Chairman Walsh, Messrs. Dowd,

Gunnison, Holland, Connell and Fire

Chief Kenlon 6

Absent: Mr. Kennedy 1

THE RESOLUTION:

(412-25-BZ)

WHEREAS, William F. Doyle, for Rosie Kellner, owner, filed, April 16, 1925, an application, under the building zone resolution, to permit in a residence district the erection and maintenance of an apartment house, the 1st story to be used for store purposes; premises 840 Washington avenue, Brooklyn; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its regular meeting, July 28, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Lincoln place and St. Johns place are residence districts and Washington avenue is a residence and business district; and

WHEREAS, the decision of the superintendent of buildings, rendered April 13, 1925, in acting on Alt. App. No. 4644-24, reads:

"Stores in residential district contrary to Art. 2, Section 3 of the Zone Resolution.";

and

WHEREAS, the proposed building is to be of non-fireproof construction, four stories in height, with a frontage of 52 ft. 3 in. and a depth of 98 ft. 5 in. (irregular); to be occupied as stores and tenement; and

WHEREAS, the board deemed that further invasion of Washington avenue at this point was unwarranted on the ground of hardship under section 21 of the building zone resolution.

Resolved, that the decision of the superintendent of buildings be and it hereby is *affirmed*, and that the application be and it hereby is *denied*.

428-25-BZ.

APPLICANT—Louis A. Sheinart, for Jerome Hatch Realty Corp., owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit partly in a residence district and partly in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles.

PREMISES AFFECTED—101-111 Linden street, Brooklyn.

APPEARANCES—

For Applicant: Louis A. Sheinart.

For Opposition: Philip Scharf, Wm. Jacob and Chas. Tilgner.

ACTION OF BOARD—Application denied.

THE VOTE TO GRANT—

Affirmative 0

Negative: Chairman Walsh, Messrs. Dowd,

Gunnison, Holland, Connell and Fire

Chief Kenlon 6

Absent: Mr. Kennedy 1

THE RESOLUTION:

(428-25-BZ)

WHEREAS, Louis A. Sheinart, for Jerome Hatch Realty Corp., owner, filed, April 21, 1925, an application, under the building zone resolution, to permit partly in a residence district and partly in a business district the erection and maintenance of a garage for the storage of more than five motor vehicles; premises 101-111 Linden street, west side, 87 ft. 5 in. west of Evergreen avenue, Brooklyn; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its regular meeting, July 28, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Linden and Grove streets are residence districts and Evergreen avenue is a business district; and

WHEREAS, the decision of the superintendent of buildings, rendered April 8, 1925, in acting on N. B. App. No. 5562-25, reads:

"Proposed one story public garage for more than five motor vehicles to be located partly in a residence district and partly in a business district is contrary to Art. II, Sec. 3 and 4 of the Zone Resolution.";

and

WHEREAS, the proposed building is to be of non-fireproof construction, one story in height, with a frontage of 150 ft. and a depth of 200 ft.; to be occupied as a garage for the storage of more than five motor vehicles; and

WHEREAS, the board deemed that applicant failed to support his basis of appeal on the ground of hardship and in direct conflict with section 21 as to location with relation to existing public school, and there was vigorous opposition on the part of affected property owners and the board of education to the granting of this application.

Resolved, that the decision of the superintendent of buildings be and it hereby is *affirmed*, and that the application be and it hereby is *denied*.

482-25-BZ.

APPLICANT—William J. Elberth, for Irving Savings Bank, owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a "B" area district the omission of a rear yard required to start at an elevation 23 feet above curb level by the building zone resolution.

PREMISES AFFECTED—115-117 Chambers Street, Manhattan.

APPEARANCES—

For Applicant: William J. Elberth.

For Opposition: Meyer Levy.

ACTION OF BOARD—Application granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs.

Dowd, Gunnison, Holland, Connell and

Fire Chief Kenlon 6

Negative 0

Absent: Mr. Kennedy 1

THE RESOLUTION:

(482-25-BZ)

WHEREAS, Merkle & Elberth, for Irving Savings Bank, owner, filed, May 7, 1925, an application, under the building zone resolution, to permit in a "B" area district, the omission of a rear yard above elevations more than 23 ft. above curb level, as required by the building zone resolution; premises 115-117 Chambers street, Manhattan; and

MINUTES

WHEREAS, a public hearing was held on this application the board of appeals, at its regular meeting, July 28, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the district maps accompanying the building zone resolution show that this is an unrestricted use and "B" area district; and

WHEREAS, the decision of the superintendent of buildings, rendered May 1, 1925, in acting on N. B. App. No. 262-25, reads:

"1. A lawful rear yard should be provided above elevations more than 23 feet from curb level. Building Zone Resolution, Section 17b, Section 12.";

WHEREAS, the proposed building is of fireproof construction, one story and pent house in height (47 ft. high at front and 34 ft. at rear), with a frontage of 50 ft. and a depth of 73 ft. 10 in.; to be occupied as a bank; it is proposed to omit the required rear yard; and

WHEREAS, the board deemed, in view of the limited increased height of the proposed structure and the use and conduct of public bank, that the granting of this application and the omission of a rear yard would be a reasonable adjustment under the building zone resolution.

Resolved, that the board of appeals does hereby make a variation in the application of the use district regulations of the building zone resolution, and that the application be and hereby is granted on condition that the use of the proposed structure shall be restricted to the conduct and occupancy of a banking business authorized under the federal or state banking laws, limited in height to one story, with such interior subdivision as is incidental to the requirements of a banking institution; that the total height at the rear wall shall not exceed 34 ft. above curb; that all permits necessary for the prosecution of the work shall be obtained within six months and the building completed within eighteen months from the date of this action; and that the front elevation shall be constructed substantially in accordance with design of facade filed in this appeal.

71-25-BZ.
APPLICANT—Amin Merhige, owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a 1½ times height district the erection of the street wall to a height exceeding the limit required by the building zone resolution.

PREMISES AFFECTED—345-351 39th street, Brooklyn.

APPEARANCES—

For Applicant: Amin Merhige, Jr., and Amin Merhige.

For Opposition: Jane Donnan.

ACTION OF BOARD—Application denied.

THE VOTE TO GRANT—

Affirmative: Messrs. Gunnison and Holland 2

Negative: Chairman Walsh, Messrs. Dowd, Connell and Fire Chief Kenlon..... 4

Absent: Mr. Kennedy 1

THE RESOLUTION:

(571-25-BZ)

WHEREAS, Amin Merhige, owner, filed, June 3, 1925, an application, under the building zone resolution, to permit in 1½ times height district the erection of the street wall to a height exceeding the limit set by the zone resolution; premises 345-351 39th street, north side, 240 ft. west of Fourth avenue, Brooklyn; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its regular meeting, July 28, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the district maps accompanying the building zone resolution show that 39th street, Fourth avenue and 18th street are in a 1½ times height district and an unrestricted use; and

WHEREAS, the decision of the superintendent of buildings,

rendered May 23, 1925, in acting on App. No. 9053-25, reads:

"Proposition contrary to Art. III, par. 8-d of Zone Resolution. (Building exceeds 90 ft. in height, width of street 60 ft.)";

and

WHEREAS, the proposed building is to be of fireproof construction, ten stories in height, with a frontage of 120 ft. and a depth of 100 ft.; to be occupied as a factory; and

WHEREAS, there were no facts submitted to substantiate the appeal on the ground of hardship or practical difficulty under section 21 for a proposed building of reinforced concrete construction, and there was vigorous opposition on the part of affected property owners of dwelling occupancy.

Resolved, that the decision of the superintendent of buildings be and it hereby is affirmed, and that the application be and it hereby is denied.

1057-24-BZ.

APPLICANT—James J. Walker, for William A. Cameron, owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit partly in a residence district and partly in a business district and also within "B" area district, the erection and maintenance of a garage for the storage of more than five (5) motor vehicles and also the omission of rear yard required by zone resolution.

PREMISES AFFECTED—Northwest corner of 182nd street and Folin street, The Bronx.

APPEARANCES—

For Applicant: James J. Walker.

For Opposition: Mrs. George, Caroline de Vord and Clara Kopf.

ACTION OF BOARD—Report of committee adopted; application granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE TO ADOPT REPORT OF COMMITTEE AND TO GRANT ON CONDITION—

Affirmative: Chairman Walsh, Messrs.

Dowd, Gunnison, Holland and Connell.. 5

Negative 0

Absent: Mr. Kennedy and Fire Chief Kenlon 2

THE RESOLUTION:

(1057-24-BZ)

WHEREAS, James J. Walker, for William A. Cameron, owner, filed, August 20, 1924, an application, under the building zone resolution, to permit partly in a residence use district and partly in a business use district, and also within a "B" area district, the erection and maintenance of a garage for the storage of more than five motor vehicles and also the omission of the rear yard required by the zone resolution; premises northwest corner of East 182nd street and Folin street, The Bronx; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its regular meeting, July 28, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Folin and East 182nd streets are business districts and Tiebout avenue is a residence district; and the area district maps show that the premises are located in a B area district; and

WHEREAS, the decision of the superintendent of buildings, rendered July 31, 1924, in acting on N. B. App. No. 1573-24, reads:

"1. Erection of proposed garage for storage of more than five motor vehicles in business and residence district is contrary to provisions of Building Zone Resolution.

"2. Rear yard must be provided to comply with requirements of Building Zone Resolution in business and residence district.";

and

WHEREAS, the proposed building is to be of fireproof construction, two stories in height on East 182nd street and five

MINUTES

stories on Folin street, with a frontage of 125.55 ft. on East 182nd street and 100.88 ft. on Folin street and a depth of 200 ft.; to be occupied as a garage for the storage of more than five motor vehicles; and

WHEREAS, the board deemed the granting of this application for a portion of the premises under appeal, under such restrictions as would afford protection to adjoining affected property owners, would be a reasonable adjustment under section 21 of the building zone resolution.

Resolved, that the board of appeals does hereby *make a variation* in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is *granted on condition* that the structure shall not exceed in height one story above mean curb level formed by the intersection of the upper level of 182nd street and Tiebout avenue; that a yard of not less than 10 ft. in depth shall be provided above the 2nd story along the northerly gable wall to the rear of the existing dwellings on Ford street; that the structure shall not exceed a depth of 80.55 ft. along the line of 182nd street westerly from Folin street; that the westerly gable wall shall be unpierced throughout its entire height and length; that the street fronts of the structure shall be finished in face brick with architectural terra cotta or stone trimmings; that there shall be no signs erected or maintained on the upper level within the residence use area of this plot; and that all permits necessary for the prosecution of the work shall be obtained within nine months and the building completed within eighteen months from the date of this action.

681-25-BZ.

APPLICANT—James J. Walker, for Elizabeth Schindler, owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit partly in a business district and partly in a residence district the erection and maintenance of an automobile show room, sales, distributing and service station.

PREMISES AFFECTED—4650-4664 Broadway, 2-16 Sherman avenue, Manhattan.

APPEARANCES—

For Applicant: James J. Walker.

For Opposition: Edward Weinfeld, Samuel H. Reich, J. J. Storm, Jr., and Joseph Kahn.

ACTION OF BOARD—Application granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Waisn, Messrs.

Dowd, Gunnison, Holland and Connell.. 5

Negative 0

Absent: Mr. Kennedy and Fire Chief Kenlon 2

THE RESOLUTION:

(681-25-BZ)

WHEREAS, James J. Walker, for Elizabeth Schindler, owner, filed, July 1, 1925, an application, under the building zone resolution, to permit partly in a business district and partly in a residence district the erection and maintenance of an automobile show room, sales room, distributing and service station; premises 4650-4664 Broadway and 2-16 Sherman avenue, Manhattan; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its regular meeting, July 28, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Sherman avenue and Broadway are business districts; and

WHEREAS, the decision of the superintendent of buildings, rendered July 21, 1925, in acting on N. B. App. No. 347-25, reads:

"1. Garages for more than five cars or automobile repair shops are not permitted in a business or residence district."

and

WHEREAS, the proposed building is to be of fireproof construction, two stories in height, with a frontage of 180 ft. and a depth of 202 ft.; to be occupied as an automobile sales room, show room and distributing and service station, no gasoline storage on premises other than that in tanks of cars and in a 50-gallon portable tank necessary for receipt and discharge of cars on premises incidental to the operation and conduct of the automobile business conducted; and

WHEREAS, the board deemed that applicant substantiated his basis of appeal, and that it would be a hardship to deny the adjustment requested, and the use for public garage purposes is neither requested nor invoked.

Resolved, that the board of appeals does hereby *make a variation* in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is *granted on condition* that the structure be limited to two stories in height above grade; that no gasoline equipment shall be maintained or installed on the premises, other than portable tank of not exceeding 50 gallons capacity; that the use, conduct and operation of the structure shall be restricted to automobile manufacturer's sales and distributing agency; that no part of the structure shall be rented, leased or hired for live garage storage use; that there shall be no advertising signs or display exposed on the front of the building, other than the name and title of the business; that no portion of the roof within the residence use area shall be rented, leased or hired for advertising signs or display; any roof advertising to be limited to that of the occupants or lessees of the premises; authorized under the code of ordinances; that the front elevation shall be finished substantially in accordance with the photographic reproduction filed in this case; as to design and material; that all permits necessary for the prosecution of the work shall be obtained within nine months and the building completed within eighteen months from the date of this action.

AREAS FIXED.

(502-25-BZ)

The chairman presented and read a communication from Emil Gutterman, requesting the board to fix the area deemed affected and within which to obtain consents for the erection and maintenance of a garage; premises 145-147 Astoria avenue, Flushing, Borough of Queens.

The following area was approved by the board:

Both sides of Astoria avenue from Second avenue to Goodrich street; both sides of Isabella place from Astoria avenue to a point 200 feet southerly therefrom; both sides of Hoyt avenue from Second avenue to a point 100 feet west of Goodrich street and the westerly side of Singer street from Astoria street to Hoyt avenue.

(503-25-BZ)

The chairman presented and read a communication from William F. Doyle, requesting the board to fix the area deemed affected and within which to obtain consents for the erection and maintenance of a garage; premises northeast corner 179th street and Cedar avenue, The Bronx.

The following area was approved by the board:

Both sides of West 179th street from Sedgwick avenue to the railroad right of way; both sides of Cedar avenue from a point 200 feet south of West 179th street to a point 400 feet north of proposed garage and also the easterly side of Sedgwick avenue from a point formed by the intersection of a continuation of the northerly line of west 179th street therewith, to a point 110 feet southerly therefrom, and also the property to the rear for a distance of 50 feet on either side of the side lot lines of the premises in question.

(505-25-BZ)

The chairman presented and read a communication from William F. Doyle, requesting the board to fix the area deemed affected and within which to obtain con-

MINUTES

s for the erection and maintenance of a garage;
nises east side Jerome avenue, 350 feet south of
181st street, The Bronx.

he following area was approved by the board:

Both sides of Jerome avenue from East Burnside
avenue to a point 100 feet north of East 181st street
and also the property at rear and for a distance of
50 feet on each side of the side lot lines of the
premises in question.

(506-25-BZ)

he chairman presented and read a communication
William F. Doyle, requesting the board to fix the

area deemed affected and within which to obtain con-
sents for the erection and maintenance of a garage;
premises 229-233 Marion street, Brooklyn.

The following area was approved by the board:

Both sides of Marion street from Ralph avenue
to a point 100 feet east of Howard avenue and also
the properties at rear and for a distance of 50 feet
on either side of the side lot lines of the premises
in question.

Adjourned 3:15 p. m.

PREMISES AFFECTED—232-234 West 37th street, Manhattan.

APPEARANCES—

For Petitioner: William F. Doyle.

ACTION OF BOARD—Laid over to September 15, 1925, at 2 p. m., for report from Inspector Maher as to egress from adjoining fire escape.

579-25-S.

PETITIONER—Samuel Rosenblum, for Kny Scheerer Corp. of America, owner.

SUBJECT—Variation of labor law as cited in order of fire commissioner.

PREMISES AFFECTED—119-25 Seventh avenue, Manhattan.

APPEARANCES—

For Petitioner: L. B. Angelo.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Petition granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Gunnison, Holland, Connell, Chief Inspector Bastress, Superintendents Kleinert, Moore and McDermott	8
Negative	0
Absent: Messrs. Kennedy, Dowd, Fire Chief Kenlon, Deputy Fire Commissioner Hannon and Superintendent Reville ..	5

THE RESOLUTION:

(579-25-S)

WHEREAS, Samuel Rosenblum, for Kny Scheerer Corp. of America, owner, filed, June 4, 1925, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in an order of the fire commissioner, affecting premises 119-25 Seventh avenue, Manhattan; and

WHEREAS, the order of the fire commissioner, dated August 7, 1924, reads:

"1. Enclose the interior stairway in Building "B" serving as a required means of exit and the landings, platforms, and passageways connecting therewith on all sides, with partitions of fire resisting material, extending continuously from the cellar to 3 ft. above the roof, * * *.

"2. Extend the interior stairway in Building "B" to the roof as per Section 271 of the Labor Law, said extension and the landings and passageways connecting therewith to be enclosed on all sides with partitions of fire resisting material extending at least 3 ft. above the roof, as per Sections 271 and 272 of the Labor Law and Rule 2 of the Industrial Code.

"3. Arrange the fire escape on the south side of building "C," and the openings leading thereto and the windows opening on the course thereof so that same are in compliance with the provisions of Section 273 and 274 of the Labor Law, * * *.

"Note: Among the defects noted are the following: Windows on course not fireproof, self-closing. Connecting stairs placed at angle exceeding 60 degrees. Not screened to a height of 4 ft. 6 in. No counterbalanced stairway from lowest balcony to ground.";

and

WHEREAS, the building is non-fireproof, five (section C being six) stories in height, irregular in area; having a

frontage of 103 ft. on Seventh avenue and a frontage of 257 ft. 6 in. on West 17th street, subdivided into five sections—A, B, C, D, E (there being also two one-story extensions)—by brick walls with openings therein on each story; opening protected by sub-standard fire doors, excepting at the opening between sections C and D, where the opening is protected by regulation automatic fire doors; the total area of the building, including the two one-story extensions, being approximately 15,000 sq. ft.; OCCUPIED for the manufacture of metal surgical instruments, 104 persons above the 1st story; the 6th story being used for storage purposes, no occupancy; EQUIPPED with a sprinkler system and a fire alarm signal system. EXITS: Two interior wooden partitions from soffit to ceiling with wooden doors at openings; three sub-standard and one standard fire escapes; and a fireproof bridge on each story connecting buildings E and B; ROOFS of adjoining buildings, to north one story lower; to east, one story higher; and

WHEREAS, petitioner contends that a certificate of occupancy was issued in 1921—at that time the bureau of buildings rated the premises as a five-story building—and contends that the use and materials used (metal) are non-hazardous, the occupancy is small, and that the existing means of exit are adequate.

Resolved, that the board of standards and appeals does hereby make a variation from the requirements of the labor law, and that the petition be and it hereby is granted as to Item No. 2, on condition that a fixed double rung iron ladder shall be provided to scuttle in roof at the head of top story stairs; granted, as to Item No. 3, so far as it affects the screening on the existing fire escape, on condition that connecting stairs of not less than 60 degrees shall be provided between balconies with openings along course of fire escape, made fireproof, self closing, with counterbalanced drop ladder in guides from the lowest balcony, on condition that the 6th story shall be restricted to storage use only; denied, as to Item No. 1.

358-25-S.

PETITIONER—Frederick J. Fox, for Mable Loria, owner.

SUBJECT—Variation of labor law as cited in order of fire commissioner.

PREMISES AFFECTED—138-140 East 25th street, Manhattan.

APPEARANCES—

For Petitioner: Morris Whinston.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Petition granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Dowd, Gunnison, Holland, Connell, Chief Inspector Bastress, Superintendents Kleinert, Moore and McDermott	9
Negative	0
Absent: Messrs. Kennedy, Fire Chief Kenlon, Deputy Fire Commissioner Hannon and Superintendent Reville.....	4

THE RESOLUTION.

(358-25-S)

WHEREAS, Frederick J. Fox, for Mable Loria, owner, filed, April 2, 1925, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in an order of the fire commissioner, affecting premises 138-140 East 25th street, Manhattan; and

WHEREAS, the order of the fire commissioner, dated March 24, 1925, reads:

MINUTES

"Order No. 74395-LD:

"1. Extend the interior stairway at the west side of building to the roof, as per Section 271 of the Labor Law.

"2. Provide an outside iron balcony fire escape on the rear of building with balconies 4 ft. in width connected by stairways not less than 22 in. wide, placed at an incline of not more than 45 degrees, extending from ground to roof, constructed as per Section 273 of the Labor Law and the rules of the Board of Standards and Appeals, or carry out a proper alternative method of complying with Section 271 of the Labor Law."

WHEREAS, the building is non-fireproof, three stories and cellar in height, 44 ft. by 92 ft. in area at the 1st story and 44 ft. by 80 ft. in area above. OCCUPIED: Cellar, boiler room; 1st story, trucking office, 4 persons; 2nd story, manufacture of cooking utensils, 6 persons; 3rd story, lacquer working, 6 persons. EXITS: An interior wooden stairway, extending from the 1st story to the top story, enclosed in wooden partitions with metal covered doors at openings; DOOR of adjoining building to east is at same level; and WHEREAS, petitioner proposes to erect party wall fire escape balconies on the 2nd and 3rd stories, leading to the building to the east (No. 142 East 25th street), said building being under same ownership.

Resolved, that the board of standards and appeals does hereby make a variation from the requirements of the labor law, and that the petition be and it hereby is granted, as to Item No. 1, on condition that a fixed double rung iron ladder shall be provided at the head of stairs, top story to cuttle in roof; granted, as to Item No. 2, on condition that a party wall fire escape with balconies shall be provided at the 2nd and 3rd stories, with egress from lower termination through plain glass openings on premises to east, with a 45 degree stairway between balconies and a looseneck ladder from top story balcony to roof; openings to balconies from building in question to be fireproof self closing; granted only so long as both properties remain in single ownership and so long as conditions as to occupancy and use remain unchanged.

1343-17-S.

PETITIONER—George and Edward Blum, for A. M. D. Realty Corp., owner.

SUBJECT—Variation of labor law as cited in decision of superintendent of buildings.

PREMISES AFFECTED—208-210 West 27th street, Manhattan.

APPEARANCES—

For Petitioner: Charles Muller.

ACTION OF BOARD—Petition granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Gunnison, Holland, Connell, Chief Inspector Bastress, Superintendents Kleinert, Moore and McDermott..... 8

Negative 0

Absent: Messrs. Kennedy, Dowd, Fire Chief Kenlon, Deputy Fire Commissioner Hanlon and Superintendent Reville..... 5

THE RESOLUTION.

(353-25-S)

WHEREAS, Messrs. George and Edward Blum, for A. M. D. Realty Corp., owner, filed, April 1, 1925, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in a decision of the superintendent of buildings, affecting premises 208-10 West 27th street, Manhattan; and

WHEREAS, the decision of the superintendent of buildings, rendered March 23, 1925, reads:

"16. Windows with large panes of glass, exceeding 720 square inches each, are unlawful. Section 264 of Labor Law."

and

WHEREAS, the building is fireproof, nine stories in height, 50 ft. by 99 ft. in area. OCCUPIED: 1st story, store; upper stories, offices, showrooms and 25 per cent manufacturing, 70 persons per story; EQUIPPED with a sprinkler system and a fire alarm signal system. EXITS: Two interior fireproof stairways extending from 1st story to roof; enclosed in fireproof partitions with fireproof doors at openings; and

WHEREAS, there are openings in the front wall of the building on the 1st and 2nd stories glazed with 1/4 in. plate glass; the maximum area of the glass on the 1st story being 5 ft. by 9 ft. 4 in. and the maximum area of the glass on the 2nd story being 4 ft. by 6 ft. 10 in.; and

WHEREAS, petitioner contends that to comply with the labor law as to the area of the glass on the 1st and 2nd stories would destroy the proposed use of these stories and also would materially affect the architectural treatment of the building.

Resolved, that the board of standards and appeals does hereby make a variation from the requirements of the labor law, and that the petition be and it hereby is granted, only so far as it affects the windows on the street front of the two (2) lower stories, on condition that these openings shall be equipped with approved metal frames, glazed with polished plate glass not less than 1/4 in. in thickness, and that the labor law requirements shall be complied with in all other respects.

1343-17-S.

PETITIONER—Pendleton & Pendleton, for John Cramer Sons, owner.

SUBJECT—Application for reopening—variation of labor law as cited in order of department of labor.

PREMISES AFFECTED—199-209 Steuben street, Brooklyn.

APPEARANCES—

For Petitioner: F. W. Mayes.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Resolution modified.

THE VOTE TO MODIFY RESOLUTION—

Affirmative: Chairman Walsh, Messrs. Gunnison, Holland, Connell, Chief Inspector Bastress, Superintendents Kleinert, Moore and McDermott 8

Negative 0

Absent: Messrs. Kennedy, Dowd, Fire Chief Kenlon, Deputy Fire Commissioner Hanlon and Superintendent Reville..... 5

THE RESOLUTION:

(1343-17-S)

WHEREAS, John Cramer Sons, owners, filed, September 12, 1917, with the board of standards and appeals, a petition for variation of the requirements of section 79-c-2, labor law, to be relieved of arranging iron bars on basement windows so as to be readily movable or removable, at premises 199-209 Steuben street, Brooklyn; and

WHEREAS, it appears that the building is three stories and basement in height, of non-fireproof mill construction, approximately 54 ft. by 109 ft., irregular in area, having the basement level approximately 4 ft. 6 in. below the curb, having 9 windows on the west side, 6 windows on the north side and 6 windows on the east side, protected by permanent iron bars, having two 3-ft. window exits leading into the open areaway on the Steuben street or westerly front and one 3-ft. window exit to the open yard area at the rear east side, and two 3-ft. exits leading into the stairway enclosure at the rear west side, having the areas 6 ft. in width, but not provided with steps to the sidewalk level, having an automatic sprinkler system; occupied as a shoe factory with not more than twelve male employees in the basement at any one time, engaged in cutting leather; and

MINUTES

WHEREAS, the order of the department of labor, as re-issued by the fire department June 29, 1917, reads:

"Item No. 1. Arrange bars on windows in basement so as to be readily movable or removable from both sides in such a manner as to afford the free and unobstructed use of such windows for purposes of egress, as per Section 79C-2 of the Labor Law.";

and

WHEREAS, this petition was granted by the board at its meeting October 11, 1917, on certain conditions, and petitioner requested a modification of these conditions.

Resolved, that the order of the department of labor be and it hereby is *modified*, and the petition, only so far as it affects the openings in the north and east wall, be *granted*, on condition that the occupancy of the basement shall not exceed the allowable capacity of the legal required exits, and in no instance more than 36 male employees.

322-25-S.

PETITIONER—Elias B. Desatnek, owner.

SUBJECT—Application for reopening—variation of labor law as cited in order of fire commissioner.

PREMISES AFFECTED—4-6 Varet street, Brooklyn.

APPEARANCES—

For Petitioner: Elias B. Desatnek.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Petition reopened and granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE TO REOPEN AND GRANT—

Affirmative: Chairman Walsh, Messrs. Gunnison, Holland, Connell, Chief Inspector Bastress, Superintendents Kleinert, Moore and McDermott 8

Negative 0

Absent: Messrs. Kennedy, Dowd, Fire Chief Kenlon, Deputy Fire Commissioner Hannon and Superintendent Reville..... 5

THE RESOLUTION:

(322-25-S)

WHEREAS, Elias B. Desatnek, owner, filed, March 25, 1925, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in an order of the fire commissioner, affecting premises 4-6 Varet street and 649-653 Broadway, Brooklyn; and

WHEREAS, the order of the fire commissioner, dated March 15, 1925, reads:

"1. Extend the interior stairway at the east side of building to the roof, as per Section 271 of the Labor Law.";

and

WHEREAS, the building is non-fireproof, four stories in height, 48 ft. 5½ in. by 43 ft. 3 in. average depth, approximately 2,100 sq. ft. in area; OCCUPIED as a tenant factory; 1st story, stores; 2nd story, 6 persons; 3rd story, 5 persons; 4th story, 8 persons; equipped with a fire alarm system. EXITS: An interior wooden stairway extending from the 1st story to the top story, enclosed in wood partitions, metal covered on both sides, leading directly to Varet street entrance, with fire doors at openings; stationary iron ladder to roof scuttle; a standard fire escape on the front of the building; ROOFS of adjoining buildings are at same level at east and 20 ft. lower at west; and

WHEREAS, relief of the same order under Cal. No. 47-18-S was granted by the board October 24, 1918, on the claim of a fire-resisting stair enclosure, whereas enclosure is of wood, metal covered; and

WHEREAS, petitioner has reduced the occupancy to 19 persons above the 1st story, and requests this petition be granted; and

WHEREAS, this petition was denied by the board at its meeting June 16, 1925, and reopened by vote of the board.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the petition be and it hereby is *granted on condition* that a fixed double rung iron ladder shall be provided within the stair hall enclosure from the top story to scuttle in roof, and *granted* only so long as conditions as to occupancy and use remain unchanged.

APPLIANCES SUBMITTED FOR APPROVAL.

MINUTES

BOARD OF APPEALS

*CORRECTION.

The minutes of the meeting of the board of appeals, held Tuesday afternoon, July 8, 1924, as they appeared in Bulletin No. 29, Vol. IX, are hereby corrected to read as follows:

THE RESOLUTION:

(526-24-A)

WHEREAS, Haynes Automobile Co., lessee, filed, April 11, 1924, an appeal, with the board of appeals, from an order of the fire commissioner, affecting premises 615-621 West 56th street and 614-620 West 57th street, Borough of Manhattan; and

WHEREAS, the order of the fire commissioner, dated November 17, 1923, reads:

"2. Install a standpipe system with risers 4 in. in diameter tested to withstand a pressure of 300 lbs. per square inch, extending from cellar to roof * * *.

"3. Install an approved oil separator, trap or other similar apparatus.";

and

*Correction—Line 25, "HOLMAN—Thursday Night, July 10—", omitted.

WHEREAS, the building is fireproof, two stories in height with a frontage of 100 ft. on West 56th street and a frontage of 100 ft. on West 57th street, and a depth of 200 ft. (20,000 sq. ft. in area). OCCUPIED on the first story of the 56th street front as a public garage and the remainder of the building as a service station for Haynes automobiles; and

WHEREAS, appellant contends the physical location of the premises—low height and facing on two streets—is such that a standpipe would afford no material assistance in the extinguishment of fire and that owing to the proximity of the sewer outlet to the premises the oil separator is unnecessary.

Resolved, that the order of the fire commissioner be and it hereby is modified, and the appeal be and it hereby is granted, as to Item 2, on condition that a portable fomite extinguisher on wheels shall be provided on 2nd story and that the 1st story shall be sub-divided approximately in half by a fireproof partition; and granted, as to Item 3, on condition that the drainage system of building shall be equipped with oil separator; and granted so long as the operation, use and occupancy of building are maintained by the present lessee for the repair and alteration on their own property.

MINUTES

BOARD OF APPEALS

*CORRECTION.

The minutes of the meeting of the board of appeals, held Wednesday morning, November 5, 1924, as they appeared in Bulletin No. 46, Vol. IX, are hereby corrected to read as follows:

569-23-BZ.

APPLICANT—Louis Sheinart, for Dorothy Bass, owner.

SUBJECT—Application of Louis A. Sheinart (re. decision of superintendent of buildings) to permit partly in a business district and partly in a residence district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles.

PREMISES AFFECTED—808-816 Coney Island avenue, Brooklyn.

APPEARANCES—

For Applicant: Louis A. Sheinart.

For Opposition: John O'Leary, James A. Keegan, Sadie Cohen, Morris S. King, Mary Smith, Charles Goetz, Frank Campanale, Frances A. Maher and others.

ACTION OF BOARD—Application denied.

THE VOTE TO GRANT—

Affirmative: Chairman Walsh, Messrs. Kennedy and Holland 3

Negative: Mr. Gunnison, Mr. Connell and Fire Chief Kenlon 3

Absent: Mr. Dowd 1

*Correction—Words "William F. Doyle, for Akiba Margolin" omitted and words "Louis Sheinart, for Dorothy Bass" substituted in line one of minutes and "29" changed to "19," and "B2" changed to "BZ" in line 26 of resolution and "8T3-22-B2" changed to "853-22-BZ" in line 27 of resolution.

THE RESOLUTION:

(569-23-BZ)

WHEREAS, Louis A. Sheinart, for Dorothy Bass, owner, filed, May 10, 1923, an application, under the building zone resolution, to permit partly in a business district and partly in a residence district the erection and maintenance of a garage for the storage of more than five motor vehicles; premises 808-816 Coney Island avenue, Brooklyn; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its regular meeting, November 5, 1924, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Coney Island avenue is a business district and Ditmas avenue and Cortelyou road are residence districts; and

WHEREAS, the decision of the superintendent of buildings, rendered February 27, 1923, in acting on N. B. Application No. 2828-23, reads:

"Denied—Proposition contrary to the Zone Resolution Art. II, Sec. 4. A public garage for more than 5 motor vehicles in a business district."

and

WHEREAS, the proposed building is to be of non-fireproof construction, one story in height, with a frontage of 120 feet 4 inches and a depth of 145 feet 10 inches; to be occupied as a garage for more than 5 motor vehicles; and

WHEREAS, similar application, Calendar No. 750-19-BZ and 853-22-BZ, were denied by the board and there was opposition to the granting of the application on the part of neighboring property owners.

Resolved, that the decision of the superintendent of buildings be and it hereby is affirmed, and the application be and it hereby is denied.

RULES

FIRE RETARDING RULES

adopted by the Board of Standards and Appeals August 30, 1917; Amended November 1, 1917.

Rule 1. Fire Retarding Materials for Garages, Motor Vehicle Repair Shops and Oil Selling Stations. In garages, motor vehicle repair shops and oil selling stations any material or form of construction shall be deemed fire-retarding within the meaning of §73, subdivision 3, of the building code, that resists the action of flame and heat when subjected to a continuous fire for one hour at an average temperature of seventeen hundred (1700) degrees Fahrenheit without the passage of flame, and with a maximum temperature rise to four hundred (400) degrees Fahrenheit on the side away from the fire. The point at which the temperature of transmitted heat is measured shall be protected from external air and weather conditions.

When the test specimen is in the form of partition construction, the area under test shall be not less than one hundred (100) square feet and least dimension shall be not less than nine (9) feet. When in the form of floor construction, the area under test shall be not less than two hundred (200) square feet and the least dimension shall be not less than fourteen (14) feet.

During the fire, the floor construction shall support the live load for which it is designed, and after the fire shall safely sustain twice the designed live load with a maximum deflection of not more than one two-hundredth ($1/200$) part of the span.

Rule 2. Wood Joisted Floor Construction. Wood joisted floor construction shall be accepted as fire-retarding construction in non-fireproof buildings used as garages, motor vehicle repair shops or oil selling stations when the beams are protected on the upper and under sides with the fire-retarding materials specified in rules for floor and ceiling coverings.

Rule 3. Floor Covering. Any one of the following forms of construction shall be accepted as fire-retarding or the covering of the upper sides of wood floor beams in joisted floor construction in non-fireproof buildings used as garages, motor vehicle repair shops or oil selling stations:

(a) Seven-eighths ($7/8$) inch wood underflooring protected with a membrane of two-ply waterproofing covered with not less than two and one-half ($2\frac{1}{2}$) inches of 1:2½:5 concrete or better, reinforced with not less than one-fourth ($1/4$) of one (1) per cent of steel mesh.

(b) Two and one-half ($2\frac{1}{2}$) inches of 1:2:4 concrete applied directly to the top of the joists, with or without temporary support, reinforced with not less than one-fourth of one per cent steel rods, mesh or steel lath, and having the tops of the joists coated with approved waterproof paint or protected by tar paper on the top and on the sides for a distance of three inches from the top. (Amendment, Nov. 1, 1917.)

Rule 4. Ceiling Covering. Any one of the following forms of construction shall be accepted as fire-retarding or the covering of the undersides of wood floor beams in joisted floor construction in non-fireproof buildings used as garages, motor vehicle repair shops or oil selling stations:

(a) One-half ($1/2$) inch plaster boards with pointed joints covered with No. 26 U. S. gauge sheet metal with one (1) inch lapped seams nailed to the wood beams when spaced not more than sixteen (16) inches on centers, or nailed to furring strips when the floor beams are spaced more than sixteen (16) inches on centers;

(b) Two thicknesses of one-quarter ($1/4$) inch asbestos board laid with tight staggered joints and nailed to the beams, when spaced not more than sixteen (16) inches on centers, or nailed to furring strips when the floor beams are more than sixteen (16) inches on centers.

(c) Metal lath weighing not less than three pounds per square yard, attached to furring strips and plastered with Portland cement mortar at least three-quarters ($3/4$) inch thick.

Rule 5. Attachment to Ceiling. Fire-retarding ceilings in non-fireproof buildings used as garages, motor vehicle repair shops or oil selling stations shall be attached to wood floor beams and girders in such manner as to maintain an air space between the wood beams, and all wood beams shall be seasoned before applying the protective coat.

Rule 6. Openings in Fire-Retarding Floors. Pipes or conduits which pass through floors shall be fitted with metal thimbles and made watertight for a height of three (3) inches above the floor.

Rule 7. Columns. All structural posts and columns in non-fireproof buildings required to be fire-retarded shall be protected with the fire-retarding materials specified for ceiling coverings in these rules, or with any of the materials accepted in fireproof construction; except that an air space shall not be required around steel or cast iron columns.

Where necessary for protection against mechanical injury, the fire-retarding protection on columns shall be jacketed to a height of five (5) feet from the ground with No. 4 U. S. gauge metal.

Rule 8. Girders. All girders in non-fireproof buildings required to be fire-retarded shall be protected with the fire-retarding materials specified for ceiling coverings in these rules, or with any of the materials acceptable in fireproof construction; except that an air space need not be provided around steel girders.

Rule 9. Shaft Enclosures. Existing stairways and vertical shafts in non-fireproof business buildings hereafter converted to be used as garages, motor vehicle repair shops or oil selling stations shall be enclosed in fire-retarding partitions continued through the non-fireproof floor construction, and when unfilled wood stud partitions are used, the space between the floor beams shall be fire-stopped with incombustible materials. All openings in such partitions shall be protected with accepted metal-covered fire doors or windows. Wherever necessary for protection against mechanical injury, the partition shall be jacketed to a height of five (5) feet on the garage side with No. 4 U. S. gauge metal. Any one of the following forms of partitions shall be accepted for the enclosure:

(a) Two by four inch wood studs, spaced not more than sixteen (16) inches on centers, covered both sides with metal lath weighing not less than three pounds per square yard, attached to furring strips and plastered with Portland cement mortar at least three-quarters ($3/4$) of an inch thick;

(b) Two by four inch wood studs spaced not more than sixteen (16) inches on centers, covered both sides with seven-eighths ($7/8$) inch wood sheathing, one-half ($1/2$) inch plaster boards with pointed joints and No. 26 U. S. gauge sheet metal with one-inch lapped seams;

(c) Two by four inch wood studs spaced not more than sixteen (16) inches on centers, covered both sides with seven-eighths ($7/8$) inch wood sheathing, two thicknesses of one-quarter ($1/4$) inch asbestos boards laid with tight staggered joints and jacketed with No. 16 U. S. gauge metal on the garage side to a height of five (5) feet.

(d) Two by four inch wood studs spaced not more than sixteen (16) inches on centers, filled in solidly between the studs with four inches of approved fireproof materials and covered on both sides with No. 26 U. S. gauge metal;

(e) Existing wood stud, lath and plaster partitions covered on the garage side with No. 26 U. S. gauge sheet metal with one-inch lapped seams.

BOARD OF APPEALS.

Appeals from Administrative Orders.

The forty-eight pier cases listed herewith were laid over, pending decision by the Supreme Court on a test case.

Pier Cases.

- 480-19-A—Piers 4 and 5, North River, Manhattan.
- 481-19-A—Old Pier 3, North River, Manhattan.
- 594-19-A—Pier 8, North River, Manhattan.
- 595-19-A—Pier 44, East River, Manhattan.
- 877-19-A—Pier 14, North River, Manhattan.
- 878-19-A—Pier 15, North River, Manhattan.
- 879-19-A—Pier 15, North River, Manhattan.
- 880-19-A—Pier 28, East River, Manhattan.
- 881-19-A—Pier 1 (Old), North River, Manhattan.
- 882-19-A—Pier 27, North River, Manhattan.
- 883-19-A—Pier 29, North River, Manhattan.
- 884-19-A—Pier 30, North River, Manhattan.
- 885-19-A—Pier 78, North River, Manhattan.
- 886-19-A—Pier 42, North River, Manhattan.
- 890-19-A—Pier 70, East River, Manhattan.
- 937-19-A—Piers 37 and 38, East River, Manhattan.
- 948-19-A—Pier 121, foot of West 131st street, North River, Manhattan. (Order No. 95587-F.)
- 949-19-A—Pier 121, foot of West 131st street, North River, Manhattan. (Order No. 95586-F.)
- 950-19-A—Pier 121, foot of West 131st street, North River, Manhattan. (Order No. 95585-F.)
- 981-19-A—Piers 22-25, East River, Manhattan.
- 1003-19-A—Pier 28, North River, Manhattan.
- 31-20-A—Pier 13, East River, foot of Wall street, Manhattan.
- 265-20-A—Pier 46, East River, foot of Van Brunt street, Brooklyn.
- 266-20-A—Pier 39, East River, foot of Van Dyke street, Brooklyn.
- 267-20-A—Pier 31, East River, s. w. s. Atlantic Basin, Brooklyn.
- 268-20-A—Pier 36, East River, foot of Pioneer street, Brooklyn.
- 269-20-A—Pier 35, East River, n. e. s. Atlantic Basin, Brooklyn.
- 270-20-A—Pier 34, East River, foot of Hamilton street, Brooklyn.
- 271-20-A—Pier 27, East River, foot of Baltic street, Brooklyn.
- 272-20-A—Pier 17, East River, foot of Joralemon street, Brooklyn.
- 273-20-A—Pier 19, East River, foot of Clark street, Brooklyn.
- 318-20-A—Pier between North 4th and 5th streets, East River, Brooklyn.
- 352-20-A—Pier 3, Wallabout basin, foot of Washington and E streets, Brooklyn.
- 353-20-A—Pier 2, Wallabout basin, foot of Washington and F streets, Brooklyn.
- 383-20-A—Pier 20, East River Manhattan.
- 420-20-A—Pier 5, between Poplar and Middagh streets, Brooklyn.
- 421-20-A—Pier 22, foot of Atlantic avenue, Brooklyn.
- 422-20-A—Pier 29, foot of Harrison street, Brooklyn.

- 423-20-A—Pier 32, foot of Degraw street, Brooklyn.
- 471-20-A—Pier between North 4th and 5th streets, Brooklyn.
- 907-21-A—East side South street, foot of Dover street, Manhattan.
- 1205-21-A—Pier No. 21, East River, east side South street, foot of Dover street, Manhattan.
- 1302-21-A—Pier 15, East River, Manhattan.
- 1541-21-A—Pier 3, between Main and Dock streets, Brooklyn.
- 1542-21-A—Pier 3, between Main and Dock Streets, Brooklyn.
- 1543-21-A—Pier 2, between Main and Dock streets, Brooklyn.
- 1544-21-A—Pier 2, between Main and Dock streets, Brooklyn.
- 1545-21-A—Pier 2, between Main and Dock streets, Brooklyn.

- 259-25-SA—Electrol Automatic Oil Burner.
- 340-25-SA—McCann-Harrison Low Pressure Oil Burner, approval of.

Cases listed in the Reserve Calendar are cases upon which action by the board has been deferred pending committee reports, of this board, court or department actions, and will remain thereon until the aforesaid reports, court or departmental actions are consummated. Whereupon the case or cases will be restored to the regular calendar and due notice of the date set for hearing will be mailed to the appellant, applicant or petitioner of record.

FORMS FOR NOTICES TO PROPERTY OWNERS

If applicants, under the building zone resolution, desire copies of Form 13A, for notices to property owners, such forms are not to be supplied by this office.

The applicant is entitled only to one copy of Form 13A, properly filled out.

If he desires additional copies for his own convenience in notifying property owners, he can obtain such copies from The O'Connell Press, 176 Park Row, Manhattan, at three cents each, postage to be added if the forms are to be supplied by mail.

WARNING.

Notice is hereby given to all petitioners, appellants and applicants for relief at the hands of the Board of Standards and Appeals and of the Board of Appeals, and to all lawyers, architects and engineers representing owners or lessees in proceedings before these boards—

First, That if they do not appear in person or by representative at the hearing on their case, dismissal for lack of prosecution is likely to result.

Second, That due and ample notice of the date set for hearing is provided in the publication in this BULLETIN of the calendars of these boards, each case being set down by Calendar Number and premises under the date of the hearing.

Third, That no plea of ignorance of the date of the hearing can be entertained in view of this publication and

of the posting of the calendars on the bulletin board in the offices of the board and of the further publication of the calendars in the daily press.

Fourth, That no one is entitled to written notice of the date for the hearing in his case, and that the plea of failure to receive such notice is no excuse for neglect to appear.

Fifth, That the business of these boards is to dispose of all cases promptly, for the reason that the pendency of an appeal or petition ties the hands of the administrative official in enforcing his order; therefore, no appeal or petition will be allowed to be hung up by reason of failure of the appellant or petitioner to file necessary data, or by any other method of delay.

OFFICE—Municipal Building, Rooms 1001 to 1015.

TELEPHONE—Worth 0184.

OFFICE HOURS—9 a. m. to 4 p. m. Saturdays, 9 a. m. to 12 noon.

All communications should be addressed to the chairman of the board.

CONTENTS

This issue of the Bulletin contains, in the order given—

- Docket.
- Call of Clerk's Calendar.
- The Trial Calendar.
- Notices in Building Zone Cases.
- Rules.
- Reserve Calendar.
- Progress Report.

DATES AND HOURS OF MEETING.

Board of Appeals, Tuesdays, at 10 a. m.

Special meetings as listed in this Calendar.

Call of Clerk's Calendar, Tuesdays, at 2 p. m.

Board of Standards and Appeals, as listed in the Calendar.

All hearings are held in Room 1013, Municipal Building, Manhattan.

THE LIBRARY OF THE

HOURS FOR CONSULTATION.

10 A. M. to 1 P. M.

Any person desiring to consult the chairman or the engineers, pertaining to the work of either board, will be seen only between the hours of ten in the morning and one in the afternoon—Saturdays excepted.

CALL OF CLERK'S CALENDAR.

The Clerk's Calendar consists of applications under the Building Zone Resolution, and its object is to give interested property owners opportunity to file objections, if any, and will be called in Room 1013, Tuesday, September 8, 1925, at 2 o'clock. At this call each case is set for hearing on a definite day.

The next subsequent Call of the Calendar will be on Tuesday, September 15, 1925, at 2 o'clock.

The Clerk's Calendar is not to be confused with the calendar of cases that have been definitely set for hearing on fixed days.

NOTICE TO APPELLANTS AND PETITIONERS.

No appeal, application or petition will be entertained in connection with which court proceedings are pending or in progress, nor accepted that are not filed within twenty days from the date of the action of the Administrative Official.

Any communication purporting to be an appeal, application or petition shall be regarded as a mere notice of intention to seek relief until it is filed on the form required by the rules of this board.

Upon receipt of any such communication the writer will be supplied with the official forms for presenting his appeal, application or petition, and if he fails to supply the data required thereon, within twenty days, his case may be dismissed for lack of prosecution.

At the time of filing an application, the appellant or petitioner shall forward a signed notice of appeal addressed to the administrative official (either superintendent of buildings or fire commissioner) and file with this board a duplicate of said notice.

Petitioners are advised that their plans must indicate the points of the compass so as to establish the true location and position of the property, the subject of the appeal.

Appeals, applications and petitions will be simplified and expedited by conforming to these directions.

WILLIAM E. WALSH, Chairman.

- AL. NO. 298-25-BZ—Application, March 18, 1925, under the building zone resolution, of William F. Doyle, applicant, on behalf of William Drosihn, Jr., owner, to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles; premises 234-238 East 85th street, Manhattan.
- AL. NO. 1091-24-BZ—Application, September 2, 1924, under the building zone resolution, of John W. Clancy, applicant, on behalf of Valballe Corporation, owner, to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles; premises 341 East 184th street, northwest corner of Marion avenue, The Bronx.
- AL. NO. 402-25-BZ—Application, April 14, 1925, under the building zone resolution, of William F. Doyle, applicant, on behalf of Emma A. Justice, owner, to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles; premises southeast corner of East 182nd street and Folin street, The Bronx.
- AL. NO. 429-25-BZ—Application, April 21, 1925, under the building zone resolution, of Samuel Gardstein, architect, on behalf of Isabelle Weber, owner, to permit in a residence district extending from a business district the erection and maintenance of a residence building to be used for store purposes on the first story; premises 2374-2376 60th street, Brooklyn.
- AL. NO. 551-25-BZ—Application, May 27, 1925, under the building zone resolution, of Alfred H. Eccles, architect, on behalf of Henry

Hellenek, owner, to permit in a business district and also within 200 ft. of a school, the erection and maintenance of a garage for the storage of more than five (5) motor vehicles; premises south side of Patterson avenue, 50 ft. west of Ely avenue, Astoria, Borough of Queens.

CAL. NO. 1534-24-BZ—Application, December 30, 1924, under the building zone resolution, of William J. Conway, architect, on behalf of John Muldoon, owner, to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles; premises 64-68 West 9th street, Brooklyn.

CAL. NO. 87-25-BZ—Application, January 21, 1925, under the building zone resolution, of David L. Malbin, applicant, on behalf of Pasquale Sabbarese, owner, to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles; premises 617-633 Brooklyn avenue, Brooklyn.

CAL. NO. 306-25-BZ—Application, March 19, 1925, under the building zone resolution, of William Farrell, architect, Emil E. Gabler, owner, Casanova Nash Sales Corp., lessee, to permit in a business district the use and occupancy of a new building as a garage for the storage of more than five (5) motor vehicles; premises 700 Southern boulevard, northeast corner of Leggett avenue, The Bronx.

CAL. NO. 343-25-BZ—Application, March 30, 1925, under the building zone resolution, of Benjamin Bag, applicant, on behalf of Bay Ridge Building Materials Corporation, owner, to permit in a residence district the maintenance of a building material storage yard; premises 244 69th street, Brooklyn.

BOARD OF APPEALS.

Tuesday, October 6, 1925, at 10 a. m.

Appeal from Administrative Order.

510-25-A—102 71st street, Brooklyn.

Under the Building Zone Resolution.

NOTICE IS HEREBY GIVEN by the board of appeals of a public hearing under the provisions of the building zone resolution, *Tuesday morning, October 6, 1925, at 10 o'clock*, in Room 1013, Municipal Building, on the following matters:

CAL. NO. 1250-24-BZ—Application, October 21, 1924, under the building zone resolution, of Croker National Fire Prevention Engineering Co., for Anna M. Fischetti, owner, to permit in a residence district the maintenance of a garage for the storage of five (5) pleasure motor vehicles, four (4) spaces rented to persons not residing on the premises; premises 87 Clermont avenue, rear, Brooklyn.

CAL. NO. 1453-24-BZ—Application, December 9, 1924, under the building zone resolution, of John J. Dunnigan, applicant, on behalf of James Murphy, owner, to permit in a residence district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles; premises 24 Evelyn place, southeast corner of Davidson avenue, The Bronx.

CAL. NO. 97-25-BZ.—Application, January 23, 1925, under the building zone resolution, of Robert Kaplan, architect and engineer, on behalf of Ros-Sil Realty Corporation, owner, to permit in a business and "B" area district the maintenance of a rear yard less in depth than that required by the building zone resolution; premises 13 West 36th street, Manhattan.

CAL. NO. 484-25-BZ—Application, May 8, 1925, under the building zone resolution, of William F. Doyle, applicant, on behalf of Helen Pelcyger, owner, to permit in a residence district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles; premises 836-846 Crown street, southwest corner of Ford street, Brooklyn.

CAL. NO. 142-25-BZ.—Application, February 2, 1925, under the building zone resolution, of Irene

Thatcher, applicant and owner, to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles; premises northwest corner of Coney Island avenue and Avenue N Brooklyn.

CAL. NO. 225-25-BZ—Application, February 25, 1925, under the building zone resolution, of Thomas O'Rourke Gallagher, applicant, on behalf of Mymaud Construction Co. owner, to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles; premises southwest corner of Metropolitan avenue and 125th street, Richmond Hill, Borough of Queens.

CAL. NO. 269-25-BZ—Application, March 10, 1925, under the building zone resolution, of William A. Giesen, architect, on behalf of Agnes Connolly, owner, to permit in a residence district the erection and maintenance of a garage for the storage of five (5) pleasure motor vehicles, four (4) spaces rented to persons not residing on the premises; premises 2808 Pond place, The Bronx.

CAL. NO. 447-25-BZ—Application, April 27, 1925, under the building zone resolution, of Benj. Driesler, Jr., architect, on behalf of Incorporated Parkway Builders, Inc., owner, to permit partly in a business district and partly in a residence district extending from an unrestricted district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles; premises 71-85 Caton place, Brooklyn.

CAL. NO. 423-25-BZ—Application, April 20, 1925, under the building zone resolution, of Samuel Schlau, applicant, on behalf of Isabel Burger, owner, to permit in an "F" area district the erection of a building, the area of which is in excess of that permitted in such district; premises 123-02 and 123-08 Rockaway Beach boulevard, Rockaway Park, Borough of Queens.

WILLIAM E. WALSH, *Chairman.*

CONCRETE RULES

USE OF HYDRATED LIME IN CONCRETE.

Adopted by the Board of Standards and Appeals, April 19, 1920, under Cal. No. 153-20-S.

The use of hydrated lime in all classes of concrete construction shall not be prohibited when used in accordance with the conditions hereinafter set forth.

The hydrated lime shall conform with the standard specifications for this material which have been adopted by the American Society for Testing Materials.

The maximum amount of hydrated lime which may be used shall conform with the following table, all weights given being the amount of lime which may be incorporated

for each ninety-five pound bag of Portland cement.

1-1½-3 Mix, 4 pounds of hydrated lime per bag of cement.

1-2-4 Mix, 5 pounds of hydrated lime per bag of cement.

1-2½-5 Mix, 6 pounds of hydrated lime per bag of cement.

For hand mixed concrete, the hydrated lime and Portland cement shall be well mixed while dry.

Hydrated lime shall not be used in concrete which is to be deposited under water.

RULES

FIRE RETARDING RULES

adopted by the Board of Standards and Appeals August 30, 1917; Amended November 1, 1917.

Rule 1. Fire Retarding Materials for Garages, Motor Vehicle Repair Shops and Oil Selling Stations. In garages, motor vehicle repair shops and oil selling stations any material or form of construction shall be deemed fire-retarding within the meaning of §73, subdivision 3, of the building code, that resists the action of flame and heat when subjected to a continuous fire for one hour at an average temperature of seventeen hundred (1700) degrees Fahrenheit without the passage of flame, and with a maximum temperature rise to four hundred (400) degrees Fahrenheit on the side away from the fire. The point at which the temperature of transmitted heat is measured shall be protected from external air and weather conditions.

When the test specimen is in the form of partition construction, the area under test shall be not less than one hundred (100) square feet and least dimension shall be not less than nine (9) feet. When in the form of floor construction, the area under test shall be not less than two hundred (200) square feet and the least dimension shall be not less than fourteen (14) feet.

During the fire, the floor construction shall support the live load for which it is designed, and after the fire shall safely sustain twice the designed live load with a maximum deflection of not more than one two-hundredth (1/200) part of the span.

Rule 2. Wood Joisted Floor Construction. Wood joisted floor construction shall be accepted as fire-retarding construction in non-fireproof buildings used as garages, motor vehicle repair shops or oil selling stations when the beams are protected on the upper and under sides with the fire-retarding materials specified in rules for floor and ceiling coverings.

Rule 3. Floor Covering. Any one of the following forms of construction shall be accepted as fire-retarding or the covering of the upper sides of wood floor beams in joisted floor construction in non-fireproof buildings used as garages, motor vehicle repair shops or oil selling stations:

(a) Seven-eighths ($\frac{7}{8}$) inch wood underflooring protected with a membrane of two-ply waterproofing covered with not less than two and one-half ($2\frac{1}{2}$) inches of 1:2½:5 concrete or better, reinforced with not less than one-fourth ($\frac{1}{4}$) of one (1) per cent of steel mesh.

(b) Two and one-half ($2\frac{1}{2}$) inches of 1:2:4 concrete applied directly to the top of the joists, with or without temporary support, reinforced with not less than one-fourth of one per cent steel rods, mesh or steel lath, and having the tops of the joists coated with approved waterproof paint or protected by tar paper on the top and on the sides for a distance of three inches from the top. (Amendment, Nov. 1, 1917.)

Rule 4. Ceiling Covering. Any one of the following forms of construction shall be accepted as fire-retarding or the covering of the undersides of wood floor beams in joisted floor construction in non-fireproof buildings used as garages, motor vehicle repair shops or oil selling stations:

(a) One-half ($\frac{1}{2}$) inch plaster boards with pointed joints covered with No. 26 U. S. gauge sheet metal with one (1) inch lapped seams nailed to the wood beams when spaced not more than sixteen (16) inches on centers, or nailed to furring strips when the floor beams are spaced more than sixteen (16) inches on centers;

(b) Two thicknesses of one-quarter ($\frac{1}{4}$) inch asbestos board laid with tight staggered joints and nailed to the beams, when spaced not more than sixteen (16) inches on centers, or nailed to furring strips when the floor beams are more than sixteen (16) inches on centers.

(c) Metal lath weighing not less than three pounds per square yard, attached to furring strips and plastered with Portland cement mortar at least three-quarters ($\frac{3}{4}$) inch thick.

Rule 5. Attachment to Ceiling. Fire-retarding ceilings in non-fireproof buildings used as garages, motor vehicle repair shops or oil selling stations shall be attached to wood floor beams and girders in such manner as to maintain an air space between the wood beams, and all wood beams shall be seasoned before applying the protective coat.

Rule 6. Openings in Fire-Retarding Floors. Pipes or conduits which pass through floors shall be fitted with metal thimbles and made watertight for a height of three (3) inches above the floor.

Rule 7. Columns. All structural posts and columns in non-fireproof buildings required to be fire-retarded shall be protected with the fire-retarding materials specified for ceiling coverings in these rules, or with any of the materials accepted in fireproof construction; except that an air space shall not be required around steel or cast iron columns.

Where necessary for protection against mechanical injury, the fire-retarding protection on columns shall be jacketed to a height of five (5) feet from the ground with No. 4 U. S. gauge metal.

Rule 8. Girders. All girders in non-fireproof buildings required to be fire-retarded shall be protected with the fire-retarding materials specified for ceiling coverings in these rules, or with any of the materials acceptable in fireproof construction; except that an air space need not be provided around steel girders.

Rule 9. Shaft Enclosures. Existing stairways and vertical shafts in non-fireproof business buildings hereafter converted to be used as garages, motor vehicle repair shops or oil selling stations shall be enclosed in fire-retarding partitions continued through the non-fireproof floor construction, and when unfilled wood stud partitions are used, the space between the floor beams shall be fire-stopped with incombustible materials. All openings in such partitions shall be protected with accepted metal-covered fire doors or windows. Wherever necessary for protection against mechanical injury, the partition shall be jacketed to a height of five (5) feet on the garage side with No. 4 U. S. gauge metal. Any one of the following forms of partitions shall be accepted for the enclosure:

(a) Two by four inch wood studs, spaced not more than sixteen (16) inches on centers, covered both sides with metal lath weighing not less than three pounds per square yard, attached to furring strips and plastered with Portland cement mortar at least three-quarters ($\frac{3}{4}$) of an inch thick;

(b) Two by four inch wood studs spaced not more than sixteen (16) inches on centers, covered both sides with seven-eighths ($\frac{7}{8}$) inch wood sheathing, one-half ($\frac{1}{2}$) inch plaster boards with pointed joints and No. 26 U. S. gauge sheet metal with one-inch lapped seams;

(c) Two by four inch wood studs spaced not more than sixteen (16) inches on centers, covered both sides with seven-eighths ($\frac{7}{8}$) inch wood sheathing, two thicknesses of one-quarter ($\frac{1}{4}$) inch asbestos boards laid with tight staggered joints and jacketed with No. 16 U. S. gauge metal on the garage side to a height of five (5) feet.

(d) Two by four inch wood studs spaced not more than sixteen (16) inches on centers, filled in solidly between the studs with four inches of approved fireproof materials and covered on both sides with No. 26 U. S. gauge metal;

(e) Existing wood stud, lath and plaster partitions covered on the garage side with No. 26 U. S. gauge sheet metal with one-inch lapped seams.

Cases listed in the Reserve Calendar are cases upon which action by the board has been deferred pending committee reports, of this board, court or department actions, and will remain thereon until the aforesaid reports, court or departmental actions are consummated. Whereupon the case or cases will be restored to the regular calendar and due notice of the date set for hearing will be mailed to the appellant, applicant or petitioner of record.

FORMS FOR NOTICES TO PROPERTY OWNERS

If applicants, under the building zone resolution, desire copies of Form 13A, for notices to property owners, such forms are not to be supplied by this office. The applicant is entitled only to one copy of Form 13A, properly filled out.

If he desires additional copies for his own convenience in notifying property owners, he can obtain such copies from The O'Connell Press, 176 Park Row, Manhattan, at three cents each, postage to be added if the forms are to be supplied by mail.

WARNING.

Notice is hereby given to all petitioners, appellants and applicants for relief at the hands of the Board of Standards and Appeals and of the Board of Appeals, and to all lawyers, architects and engineers representing owners or lessees in proceedings before these boards—

First, That if they do not appear in person or by representative at the hearing on their case, dismissal for lack of prosecution is likely to result.

Second, That due and ample notice of the date set for hearing is provided in the publication in this BULLETIN of the calendars of these boards, each case being set down by Calendar Number and premises under the date of the hearing.

Third, That no plea of ignorance of the date of the hearing can be entertained in view of this publication and

of the posting of the calendars on the bulletin board in the offices of the board and of the further publication of the calendars in the daily press.

Fourth, That no one is entitled to written notice of the date for the hearing in his case, and that the plea of failure to receive such notice is no excuse for neglect to appear.

Fifth, That the business of these boards is to dispose of all cases promptly, for the reason that the pendency of an appeal or petition ties the hands of the administrative official in enforcing his order; therefore, no appeal or petition will be allowed to be hung up by reason of failure of the appellant or petitioner to file necessary data, or by any other method of delay.

DATES AND HOURS OF MEETING.

Board of Appeals, Tuesdays at 10 a. m.
Special meetings as listed in this Calendar.
Call of Clerk's Calendar, Tuesdays, at 2 p. m.
Board of Standards and Appeals, as listed in the Calendar.
All hearings are held in Room 1013, Municipal Building, Manhattan.

HOURS FOR CONSULTATION.

10 A. M. to 1 P. M.

Any person desiring to consult the chairman or the engineers, pertaining to the work of either board, will be seen only between the hours of ten in the morning and one in the afternoon—Saturdays excepted.

CALL OF CLERK'S CALENDAR.

The Clerk's Calendar consists of applications under the Building Zone Resolution, and its object is to give interested property owners opportunity to file objections, if any, and will be called in Room 1013, Tuesday, September 8, 1925, at 2 o'clock. At this call each case is set for hearing on a definite day.

The next subsequent Call of the Calendar will be on Tuesday, September 15, 1925, at 2 o'clock.

The Clerk's Calendar is not to be confused with the calendar of cases that have been definitely set for hearing on fixed days.

NOTICE TO APPELLANTS AND PETITIONERS.

No appeal, application or petition will be entertained in connection with which court proceedings are pending or in progress, nor accepted that are not filed within twenty days from the date of the action of the Administrative Official.

Any communication purporting to be an appeal, application or petition shall be regarded as a mere notice of intention to seek relief until it is filed on the form required by the rules of this board.

Upon receipt of any such communication the writer will be supplied with the official forms for presenting his appeal, application or petition, and if he fails to supply the data required thereon, within twenty days, his case may be dismissed for lack of prosecution.

At the time of filing an application, the appellant or petitioner shall forward a signed notice of appeal addressed to the administrative official (either superintendent of buildings or fire commissioner) and file with this board a duplicate of said notice.

Petitioners are advised that their plans must indicate the points of the compass so as to establish the true location and position of the property, the subject of the appeal.

Appeals, applications and petitions will be simplified and expedited by conforming to these directions.

WILLIAM E. WALSH, Chairman.

718-18-S—17-23 East Broadway, Manhattan.

1418-24-S—20 East 31st street, Manhattan.

321-25-S—232-234 West 37th street, Manhattan.

BOARD OF APPEALS.

Tuesday, September 22, 1925, at 10 a. m.

Appeals from Administrative Orders.

1486-24-A—Southwest corner of Cypress avenue and Center street, East Williamsburgh, Queens.

159-25-A—East side of Broadway, from 116th street and 120th street, Manhattan.

378-25-A—West side of Van Alst avenue, 115 ft. south of South Jane street, Long Island City, Borough of Queens.

478-25-A—790-794 Greenwich street, Manhattan.

Under the Building Zone Resolution.

NOTICE IS HEREBY GIVEN by the board of appeals of a public hearing under the provisions of the building zone resolution, *Tuesday morning, September 22, 1925, at 10 o'clock, in Room 1013, Municipal Building, on the following matters:*

CAL. NO. 136-24-BZ—Application, January 29, 1924, under the building zone resolution, of John J. Dunnigan, applicant, on behalf of Max Katz, owner, to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles; premises 809 Union avenue, The Bronx.

CALENDAR

- CAL. NO. 1455-24-BZ—Application, December 9, 1924, under the building zone resolution, of Samuel Rosenblum, architect, Edlar Realty Corp., owner, A. Troskowsky, sub-lessee, to permit in a business district the maintenance of a motor vehicle repair shop; premises 34 Tieman place, Manhattan.
- CAL. NO. 262-25-BZ—Application, March 9, 1925, under the building zone resolution, of Max N. Newman, applicant, on behalf of Irene Thatcher, owner, to permit in a residence district extending from a business district the erection and maintenance of a building to be used for store purposes; premises 1406-1414 Elm avenue, Brooklyn.
- CAL. NO. 270-25-BZ—Application, March 10, 1925, under the building zone resolution, of John J. Dunnigan, applicant, on behalf of Schinasi Commercial Corp., to permit in a business district and within 200 ft. of a hospital the use and occupancy of an existing building as a garage for the storage of more than five (5) motor vehicles; premises 32-36 West 100th street, Manhattan.
- CAL. NO. 359-25-BZ—Application, April 2, 1925, under the building zone resolution, of William H. Kehoe, applicant, on behalf of Horlick Realty Corp., owner, to permit in a business district the erection of a garage for the storage of more than five (5) motor vehicles; premises 1026-1042 Liberty avenue, southwest corner of Crescent street, Brooklyn.
- CAL. NO. 363-25-BZ—Application, April 3, 1925, under the building zone resolution, of Alfred J. Boulton, applicant, on behalf of Rosa Morizio, owner, to permit in a residence district the erection and maintenance of a building to be used as a poultry slaughter house; premises east side of Private Right of Way, 226 ft. north of 84th street, Brooklyn.
- CAL. NO. 389-25-BZ—Application, April 11, 1925, under the building zone resolution, of William F. Doyle, applicant, on behalf of Patrick Tague, owner, to permit partly in a residence district and partly in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles; premises 136-140 Hall street, Brooklyn.
- CAL. NO. 405-25-BZ—Application, April 15, 1925, under the building zone resolution, of Magnuson & Kleinert, architects, for the 15th Street Amusement Company, owner, to permit in a residence district the erection and maintenance of a building to be used for theatre and store purposes; premises 187-8-9 Prospect Park West, southwest corner of 14th street, Brooklyn.
- CAL. NO. 455-25-BZ—Application, April 29, 1925, under the building zone resolution, of Edward P. Doyle, applicant, on behalf of Gould Mersereau Company, owner, to permit in a business district the erection of a building and the use of more than 25 per cent of its total floor space for factory purposes; premises east side of Nott avenue, 90 ft. east of Van Alst avenue, Long Island City, Borough of Queens.
- CAL. NO. 474-25-BZ—Application, June 3, 1925,* under the building zone resolution, of John De Hart, applicant, Mary A. Dalton, owner, Gussic Realty Co., Inc., lessee, to permit partly in a business district and partly in a residence district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles; premises 1145-1149 Ogden avenue, The Bronx.
- CAL. NO. 314-25-BZ—Application, March 23, 1925, under the building zone resolution, of John De Hart, applicant, on behalf of the Estate of Fredk. Fischer, owner, to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles; premises 1160-1162 Intervale avenue, The Bronx.
- CAL. NO. 490-25-BZ—Application, May 11, 1925, under the building zone resolution, of Philip J. Bendish, applicant and owner, to permit in a residence district the alteration of an existing garage for the storage of more than five (5) motor vehicles; premises 342 West 70th street, Manhattan.
- CAL. NO. 497-25-BZ—Application, May 12, 1925, under the building zone resolution, of John W. Clancy, applicant, on behalf of Sally C. Crane, owner, to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles; premises 2180-2182 Folin street, The Bronx.

WILLIAM E. WALSH, *Chairman.*

BOARD OF APPEALS SPECIAL MEETING.

Tuesday, September 22, 1925, at 2 p. m.
Under the Building Zone Resolution.

BOARD OF APPEALS.

Tuesday, October 6, 1925, at 10 a. m.
Appeal from Administrative Order.

510-25-A—102 71st street, Brooklyn.

Under the Building Zone Resolution.

NOTICE IS HEREBY GIVEN by the board of appeals of a public hearing under the provisions of the building zone resolution, *Tuesday morning, October 6, 1925, at 10 o'clock*, in Room 1013, Municipal Building, on the following matters:

CAL. NO. 1250-24-BZ—Application, October 21, 1924, under the building zone resolution, of Croker National Fire Prevention Engineering Co., for Anna M. Fischetti, owner, to permit in a residence district the maintenance of a garage for the storage of five (5) pleasure motor vehicles, four (4) spaces rented to persons not residing on the premises; premises 87 Clermont avenue, rear, Brooklyn.

CAL. NO. 1453-24-BZ—Application, December 9, 1924, under the building zone resolution, of John J. Dunnigan, applicant, on behalf of James Murphy, owner, to permit in a residence district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles; premises 24 Evelyn place, southeast corner of Davidson avenue, The Bronx.

CAL. NO. 97-25-BZ.—Application, January 23, 1925, under the building zone resolution, of Robert Kaplan, architect and engineer, on behalf of Ros-Sil Realty Corporation, owner, to permit in a business and "B" area district the maintenance of a rear yard less in depth than that required by the building zone resolution; premises 13 West 36th street, Manhattan.

CAL. NO. 484-25-BZ—Application, May 8, 1925, under the building zone resolution, of William F. Doyle, applicant, on behalf of Helen Pelcyger, owner, to permit in a residence district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles; premises 836-846 Crown street, southwest corner of Ford street, Brooklyn.

CAL. NO. 142-25-BZ.—Application, February 2, 1925, under the building zone resolution, of Irene

Thatcher, applicant and owner, to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles; premises northwest corner of Coney Island avenue and Avenue C, Brooklyn.

CAL. NO. 225-25-BZ—Application, February 25, 1925, under the building zone resolution, of Thomas O'Rourke Gallagher, applicant, on behalf of Mymaud Construction Co., owner, to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles; premises southwest corner of Metropolitan avenue at 125th street, Richmond Hill, Borough of Queens.

CAL. NO. 269-25-BZ—Application, March 10, 1925, under the building zone resolution, of William A. Giesen, architect, on behalf of Agn Connolly, owner, to permit in a residence district the erection and maintenance of a garage for the storage of five (5) pleasure motor vehicles, four (4) spaces rented to persons not residing on the premises; premises 28 Pond place, The Bronx.

CAL. NO. 447-25-BZ—Application, April 27, 1925, under the building zone resolution, of Benj. Drier, Jr., architect, on behalf of Incorporated Parkway Builders, Inc., owner, to permit partly in a business district and partly in a residence district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles; premises 71-85 Cat place, Brooklyn.

CAL. NO. 423-25-BZ—Application, April 20, 1925, under the building zone resolution, of Samuel Schlau, applicant, on behalf of Isaac Burger, owner, to permit in an "A" area district the erection of a building, the area of which is in excess of that permitted in such district; premises 123-02 and 123-08 Rockaway Beach boulevard, Rockaway Park, Borough of Queens.

WILLIAM E. WALSH, *Chairman*

CONCRETE RULES

USE OF HYDRATED LIME IN CONCRETE.

Adopted by the Board of Standards and Appeals, April 19, 1920, under Cal. No. 153-20-S.

The use of hydrated lime in all classes of concrete construction shall not be prohibited when used in accordance with the conditions hereinafter set forth.

The hydrated lime shall conform with the standard specifications for this material which have been adopted by the American Society for Testing Materials.

The maximum amount of hydrated lime which may be used shall conform with the following table, all weights given being the amount of lime which may be incorporated

for each ninety-five pound bag of Portland cement.

1-1½-3 Mix, 4 pounds of hydrated lime per bag of cement.

1-2-4 Mix, 5 pounds of hydrated lime per bag of cement.

1-2½-5 Mix, 6 pounds of hydrated lime per bag of cement.

For hand mixed concrete, the hydrated lime and Portland cement shall be well mixed while dry.

Hydrated lime shall not be used in concrete which is to be deposited under water.

RULES

FIRE RETARDING RULES

adopted by the Board of Standards and Appeals August 30, 1917; Amended November 1, 1917.

Rule 1. Fire Retarding Materials for Garages, Motor Vehicle Repair Shops and Oil Selling Stations. In garages, motor vehicle repair shops and oil selling stations any material or form of construction shall be deemed fire-retarding within the meaning of §73, subdivision 3, of the building code, that resists the action of flame and heat when subjected to a continuous fire for one hour at an average temperature of seventeen hundred (1700) degrees Fahrenheit without the passage of flame, and with a maximum temperature rise to four hundred (400) degrees Fahrenheit on the side away from the fire. The point at which the temperature of transmitted heat is measured shall be protected from external air and weather conditions.

When the test specimen is in the form of partition construction, the area under test shall be not less than one hundred (100) square feet and least dimension shall be not less than nine (9) feet. When in the form of floor construction, the area under test shall be not less than two hundred (200) square feet and the least dimension shall be not less than fourteen (14) feet.

During the fire, the floor construction shall support the live load for which it is designed, and after the fire shall safely sustain twice the designed live load with a maximum deflection of not more than one two-hundredth ($1/200$) part of the span.

Rule 2. Wood Joisted Floor Construction. Wood joisted floor construction shall be accepted as fire-retarding construction in non-fireproof buildings used as garages, motor vehicle repair shops or oil selling stations when the beams are protected on the upper and under sides with the fire-retarding materials specified in rules for floor and ceiling coverings.

Rule 3. Floor Covering. Any one of the following forms of construction shall be accepted as fire-retarding for the covering of the upper sides of wood floor beams in joisted floor construction in non-fireproof buildings used as garages, motor vehicle repair shops or oil selling stations:

(a) Seven-eighths ($7/8$) inch wood underflooring protected with a membrane of two-ply waterproofing covered with not less than two and one-half ($2\frac{1}{2}$) inches of 1:2½:5 concrete or better, reinforced with not less than one-fourth ($1/4$) of one (1) per cent of steel mesh.

(b) Two and one-half ($2\frac{1}{2}$) inches of 1:2:4 concrete applied directly to the top of the joists, with or without temporary support, reinforced with not less than one-fourth of one per cent steel rods, mesh or steel lath, and having the tops of the joists coated with approved waterproof paint or protected by tar paper on the top and on the sides for a distance of three inches from the top. (Amendment, Nov. 1, 1917.)

Rule 4. Ceiling Covering. Any one of the following forms of construction shall be accepted as fire-retarding for the covering of the undersides of wood floor beams in joisted floor construction in non-fireproof buildings used as garages, motor vehicle repair shops or oil selling stations:

(a) One-half ($1/2$) inch plaster boards with pointed joints covered with No. 26 U. S. gauge sheet metal with one (1) inch lapped seams nailed to the wood beams when spaced not more than sixteen (16) inches on centers, or nailed to furring strips when the floor beams are spaced more than sixteen (16) inches on centers;

(b) Two thicknesses of one-quarter ($1/4$) inch asbestos board laid with tight staggered joints and nailed to the beams, when spaced not more than sixteen (16) inches on centers, or nailed to furring strips when the floor beams are more than sixteen (16) inches on centers.

(c) Metal lath weighing not less than three pounds per square yard, attached to furring strips and plastered with Portland cement mortar at least three-quarters ($3/4$) inch thick.

Rule 5. Attachment to Ceiling. Fire-retarding ceilings in non-fireproof buildings used as garages, motor vehicle repair shops or oil selling stations shall be attached to wood floor beams and girders in such manner as to maintain an air space between the wood beams, and all wood beams shall be seasoned before applying the protective coat.

Rule 6. Openings in Fire-Retarding Floors. Pipes or conduits which pass through floors shall be fitted with metal thimbles and made watertight for a height of three (3) inches above the floor.

Rule 7. Columns. All structural posts and columns in non-fireproof buildings required to be fire-retarded shall be protected with the fire-retarding materials specified for ceiling coverings in these rules, or with any of the materials accepted in fireproof construction; except that an air space shall not be required around steel or cast iron columns.

Where necessary for protection against mechanical injury, the fire-retarding protection on columns shall be jacketed to a height of five (5) feet from the ground with No. 4 U. S. gauge metal.

Rule 8. Girders. All girders in non-fireproof buildings required to be fire-retarded shall be protected with the fire-retarding materials specified for ceiling coverings in these rules, or with any of the materials acceptable in fireproof construction; except that an air space need not be provided around steel girders.

Rule 9. Shaft Enclosures. Existing stairways and vertical shafts in non-fireproof business buildings hereafter converted to be used as garages, motor vehicle repair shops or oil selling stations shall be enclosed in fire-retarding partitions continued through the non-fireproof floor construction, and when unfilled wood stud partitions are used, the space between the floor beams shall be fire-stopped with incombustible materials. All openings in such partitions shall be protected with accepted metal-covered fire doors or windows. Wherever necessary for protection against mechanical injury, the partition shall be jacketed to a height of five (5) feet on the garage side with No. 4 U. S. gauge metal. Any one of the following forms of partitions shall be accepted for the enclosure:

(a) Two by four inch wood studs, spaced not more than sixteen (16) inches on centers, covered both sides with metal lath weighing not less than three pounds per square yard, attached to furring strips and plastered with Portland cement mortar at least three-quarters ($3/4$) of an inch thick;

(b) Two by four inch wood studs spaced not more than sixteen (16) inches on centers, covered both sides with seven-eighths ($7/8$) inch wood sheathing, one-half ($1/2$) inch plaster boards with pointed joints and No. 26 U. S. gauge sheet metal with one-inch lapped seams;

(c) Two by four inch wood studs spaced not more than sixteen (16) inches on centers, covered both sides with seven-eighths ($7/8$) inch wood sheathing, two thicknesses of one-quarter ($1/4$) inch asbestos boards laid with tight staggered joints and jacketed with No. 16 U. S. gauge metal on the garage side to a height of five (5) feet.

(d) Two by four inch wood studs spaced not more than sixteen (16) inches on centers, filled in solidly between the studs with four inches of approved fireproof materials and covered on both sides with No. 26 U. S. gauge metal;

(e) Existing wood stud, lath and plaster partitions covered on the garage side with No. 26 U. S. gauge sheet metal with one-inch lapped seams.

Cases listed in the Reserve Calendar are cases upon which action by the board has been deferred pending committee reports, of this board, court or department actions, and will remain thereon until the aforesaid reports, court or departmental actions are consummated. Whereupon the case or cases will be restored to the regular calendar and due notice of the date set for hearing will be mailed to the appellant, applicant or petitioner of record.

FORMS FOR NOTICES TO PROPERTY OWNERS

If applicants, under the building zone resolution, desire copies of Form 13A, for notices to property owners, such forms are not to be supplied by this office. The applicant is entitled only to one copy of Form 13A, properly filled out.

If he desires additional copies for his own convenience in notifying property owners, he can obtain such copies from The O'Connell Press, 176 Park Row, Manhattan, at three cents each, postage to be added if the forms are to be supplied by mail.

WARNING.

Notice is hereby given to all petitioners, appellants and applicants for relief at the hands of the Board of Standards and Appeals and of the Board of Appeals, and to all lawyers, architects and engineers representing owners or lessees in proceedings before these boards—

First, That if they do not appear in person or by representative at the hearing on their case, dismissal for lack of prosecution is likely to result.

Second, That due and ample notice of the date set for hearing is provided in the publication in this BULLETIN of the calendars of these boards, each case being set down by Calendar Number and premises under the date of the hearing.

Third, That no plea of ignorance of the date of the hearing can be entertained in view of this publication and

of the posting of the calendars on the bulletin board in the offices of the board and of the further publication of the calendars in the daily press.

Fourth, That no one is entitled to written notice of the date for the hearing in his case, and that the plea of failure to receive such notice is no excuse for neglect to appear.

Fifth, That the business of these boards is to dispose of all cases promptly, for the reason that the pendency of an appeal or petition ties the hands of the administrative official in enforcing his order; therefore, no appeal or petition will be allowed to be hung up by reason of failure of the appellant or petitioner to file necessary data, or by any other method of delay.

CONTENTS

This issue of the Bulletin contains, in the order given—

- Docket.
- Call of Clerk's Calendar.
- The Trial Calendar.
- Notices in Building Zone Cases.
- Rules.
- Reserve Calendar.
- Progress Report.

DATES AND HOURS OF MEETING.

Board of Appeals, Tuesdays, at 10 a. m.

Special meetings as listed in this Calendar.

Call of Clerk's Calendar, Tuesdays, at 2 p. m.

Board of Standards and Appeals, as listed in the Calendar.

All hearings are held in Room 1013, Municipal Building, Manhattan.

HOURS FOR CONSULTATION.

10 A. M. to 1 P. M.

Any person desiring to consult the chairman or the engineers, pertaining to the work of either board, will be seen only between the hours of ten in the morning and one in the afternoon—Saturdays excepted.

CALL OF CLERK'S CALENDAR.

The Clerk's Calendar consists of applications under the Building Zone Resolution, and its object is to give interested property owners opportunity to file objections, if any, and will be called in Room 1013, Tuesday, September 8, 1925, at 2 o'clock. At this call each case is set for hearing on a definite day.

The next subsequent Call of the Calendar will be on Tuesday, September 15, 1925, at 2 o'clock.

The Clerk's Calendar is not to be confused with the calendar of cases that have been definitely set for hearing on fixed days.

NOTICE TO APPELLANTS AND PETITIONERS.

No appeal, application or petition will be entertained in connection with which court proceedings are pending or in progress, nor accepted that are not filed within twenty days from the date of the action of the Administrative Official.

Any communication purporting to be an appeal, application or petition shall be regarded as a mere notice of intention to seek relief until it is filed on the form required by the rules of this board.

Upon receipt of any such communication the writer will be supplied with the official forms for presenting his appeal, application or petition, and if he fails to supply the data required thereon, within twenty days, his case may be dismissed for lack of prosecution.

At the time of filing an application, the appellant or petitioner shall forward a signed notice of appeal addressed to the administrative official (either superintendent of buildings or fire commissioner) and file with this board a duplicate of said notice.

Petitioners are advised that their plans must indicate the points of the compass so as to establish the true location and position of the property, the subject of the appeal.

Appeals, applications and petitions will be simplified and expedited by conforming to these directions.

WILLIAM E. WALSH, Chairman.

WILLIAM E. WALSH, *Chairman.*

CONCRETE RULES

USE OF HYDRATED LIME IN CONCRETE.

Adopted by the Board of Standards and Appeals, April 19, 1920, under Cal. No. 153-20-S.

The use of hydrated lime in all classes of concrete construction shall not be prohibited when used in accordance with the conditions hereinafter set forth.

The hydrated lime shall conform with the standard specifications for this material which have been adopted by the American Society for Testing Materials.

The maximum amount of hydrated lime which may be used shall conform with the following table, all weights given being the amount of lime which may be incorporated

for each ninety-five pound bag of Portland cement.

1-1½-3 Mix, 4 pounds of hydrated lime per bag of cement.

1-2-4 Mix, 5 pounds of hydrated lime per bag of cement.

1-2½-5 Mix, 6 pounds of hydrated lime per bag of cement.

For hand mixed concrete, the hydrated lime and Portland cement shall be well mixed while dry.

Hydrated lime shall not be used in concrete which is to be deposited under water.

RULES

FIRE RETARDING RULES

adopted by the Board of Standards and Appeals August 30, 1917; Amended November 1, 1917.

Rule 1. Fire Retarding Materials for Garages, Motor Vehicle Repair Shops and Oil Selling Stations. In garages, motor vehicle repair shops and oil selling stations any material or form of construction shall be deemed fire-retarding within the meaning of §73, subdivision 3, of the building code, that resists the action of flame and heat when subjected to a continuous fire for one hour at an average temperature of seventeen hundred (1700) degrees Fahrenheit without the passage of flame, and with a maximum temperature rise to four hundred (400) degrees Fahrenheit on the side away from the fire. The point at which the temperature of transmitted heat is measured shall be protected from external air and weather conditions.

When the test specimen is in the form of partition construction, the area under test shall be not less than one hundred (100) square feet and least dimension shall be not less than nine (9) feet. When in the form of floor construction, the area under test shall be not less than two hundred (200) square feet and the least dimension shall be not less than fourteen (14) feet.

During the fire, the floor construction shall support the live load for which it is designed, and after the fire shall safely sustain twice the designed live load with a maximum deflection of not more than one two-hundredth (1/200) part of the span.

Rule 2. Wood Joisted Floor Construction. Wood joisted floor construction shall be accepted as fire-retarding construction in non-fireproof buildings used as garages, motor vehicle repair shops or oil selling stations when the beams are protected on the upper and under sides with the fire-retarding materials specified in the rules for floor and ceiling coverings.

Rule 3. Floor Covering. Any one of the following forms of construction shall be accepted as fire-retarding for the covering of the upper sides of wood floor beams in joisted floor construction in non-fireproof buildings used as garages, motor vehicle repair shops or oil selling stations:

(a) Seven-eighths ($\frac{7}{8}$) inch wood underflooring protected with a membrane of two-ply waterproofing covered with not less than two and one-half ($2\frac{1}{2}$) inches of 1:2½:5 concrete or better, reinforced with not less than one-fourth ($\frac{1}{4}$) of one (1) per cent of steel mesh.

(b) Two and one-half ($2\frac{1}{2}$) inches of 1:2:4 concrete applied directly to the top of the joists, with or without temporary support, reinforced with not less than one-fourth of one per cent steel rods, mesh or steel lath, and having the tops of the joists coated with approved waterproof paint or protected by tar paper on the top and on the sides for a distance of three inches from the top. (Amendment, Nov. 1, 1917.)

Rule 4. Ceiling Covering. Any one of the following forms of construction shall be accepted as fire-retarding for the covering of the undersides of wood floor beams in joisted floor construction in non-fireproof buildings used as garages, motor vehicle repair shops or oil selling stations:

(a) One-half ($\frac{1}{2}$) inch plaster boards with pointed joints covered with No. 26 U. S. gauge sheet metal with one (1) inch lapped seams nailed to the wood beams when spaced not more than sixteen (16) inches on centers, or nailed to furring strips when the floor beams are spaced more than sixteen (16) inches on centers;

(b) Two thicknesses of one-quarter ($\frac{1}{4}$) inch asbestos board laid with tight staggered joints and nailed to the beams, when spaced not more than sixteen (16) inches on centers, or nailed to furring strips when the floor beams are more than sixteen (16) inches on centers.

(c) Metal lath weighing not less than three pounds per square yard, attached to furring strips and plastered with Portland cement mortar at least three-quarters ($\frac{3}{4}$) inch thick.

Rule 5. Attachment to Ceiling. Fire-retarding ceilings in non-fireproof buildings used as garages, motor vehicle repair shops or oil selling stations shall be attached to wood floor beams and girders in such manner as to maintain an air space between the wood beams, and all wood beams shall be seasoned before applying the protective coat.

Rule 6. Openings in Fire-Retarding Floors. Pipes or conduits which pass through floors shall be fitted with metal thimbles and made watertight for a height of three (3) inches above the floor.

Rule 7. Columns. All structural posts and columns in non-fireproof buildings required to be fire-retarded shall be protected with the fire-retarding materials specified for ceiling coverings in these rules, or with any of the materials accepted in fireproof construction; except that an air space shall not be required around steel or cast iron columns.

Where necessary for protection against mechanical injury, the fire-retarding protection on columns shall be jacketed to a height of five (5) feet from the ground with No. 4 U. S. gauge metal.

Rule 8. Girders. All girders in non-fireproof buildings required to be fire-retarded shall be protected with the fire-retarding materials specified for ceiling coverings in these rules, or with any of the materials acceptable in fireproof construction; except that an air space need not be provided around steel girders.

Rule 9. Shaft Enclosures. Existing stairways and vertical shafts in non-fireproof business buildings hereafter converted to be used as garages, motor vehicle repair shops or oil selling stations shall be enclosed in fire-retarding partitions continued through the non-fireproof floor construction, and when unfilled wood stud partitions are used, the space between the floor beams shall be fire-stopped with incombustible materials. All openings in such partitions shall be protected with accepted metal-covered fire doors or windows. Wherever necessary for protection against mechanical injury, the partition shall be jacketed to a height of five (5) feet on the garage side with No. 4 U. S. gauge metal. Any one of the following forms of partitions shall be accepted for the enclosure:

(a) Two by four inch wood studs, spaced not more than sixteen (16) inches on centers, covered both sides with metal lath weighing not less than three pounds per square yard, attached to furring strips and plastered with Portland cement mortar at least three-quarters ($\frac{3}{4}$) of an inch thick;

(b) Two by four inch wood studs spaced not more than sixteen (16) inches on centers, covered both sides with seven-eighths ($\frac{7}{8}$) inch wood sheathing, one-half ($\frac{1}{2}$) inch plaster boards with pointed joints and No. 26 U. S. gauge sheet metal with one-inch lapped seams;

(c) Two by four inch wood studs spaced not more than sixteen (16) inches on centers, covered both sides with seven-eighths ($\frac{7}{8}$) inch wood sheathing, two thicknesses of one-quarter ($\frac{1}{4}$) inch asbestos boards laid with tight staggered joints and jacketed with No. 16 U. S. gauge metal on the garage side to a height of five (5) feet.

(d) Two by four inch wood studs spaced not more than sixteen (16) inches on centers, filled in solidly between the studs with four inches of approved fireproof materials and covered on both sides with No. 26 U. S. gauge metal;

(e) Existing wood stud, lath and plaster partitions covered on the garage side with No. 26 U. S. gauge sheet metal with one-inch lapped seams.

BOARD OF APPEALS.

Appeals from Administrative Orders.

The forty-eight pier cases listed herewith were laid over, pending decision by the Supreme Court on a test case.

Pier Cases.

- 480-19-A—Piers 4 and 5, North River, Manhattan.
- 481-19-A—Old Pier 3, North River, Manhattan.
- 594-19-A—Pier 8, North River, Manhattan.
- 595-19-A—Pier 44, East River, Manhattan.
- 877-19-A—Pier 14, North River, Manhattan.
- 878-19-A—Pier 15, North River, Manhattan.
- 879-19-A—Pier 15, North River, Manhattan.
- 880-19-A—Pier 28, East River, Manhattan.
- 881-19-A—Pier 1 (Old), North River, Manhattan.
- 882-19-A—Pier 27, North River, Manhattan.
- 883-19-A—Pier 29, North River, Manhattan.
- 884-19-A—Pier 30, North River, Manhattan.
- 885-19-A—Pier 78, North River, Manhattan.
- 886-19-A—Pier 42, North River, Manhattan.
- 890-19-A—Pier 70, East River, Manhattan.
- 937-19-A—Piers 37 and 38, East River, Manhattan.
- 948-19-A—Pier 121, foot of West 131st street, North River, Manhattan. (Order No. 95587-F.)
- 949-19-A—Pier 121, foot of West 131st street, North River, Manhattan. (Order No. 95586-F.)
- 950-19-A—Pier 121, foot of West 131st street, North River, Manhattan. (Order No. 95585-F.)
- 981-19-A—Piers 22-25, East River, Manhattan.
- 1003-19-A—Pier 28, North River, Manhattan.
- 31-20-A—Pier 13, East River, foot of Wall street, Manhattan.
- 265-20-A—Pier 46, East River, foot of Van Brunt street, Brooklyn.
- 266-20-A—Pier 39, East River, foot of Van Dyke street, Brooklyn.
- 267-20-A—Pier 31, East River, s. w. s. Atlantic Basin, Brooklyn.
- 268-20-A—Pier 36, East River, foot of Pioneer street, Brooklyn.
- 269-20-A—Pier 35, East River, n. e. s. Atlantic Basin, Brooklyn.
- 270-20-A—Pier 34, East River, foot of Hamilton street, Brooklyn.
- 271-20-A—Pier 27, East River, foot of Baltic street, Brooklyn.
- 272-20-A—Pier 17, East River, foot of Joralemon street, Brooklyn.
- 273-20-A—Pier 19, East River, foot of Clark street, Brooklyn.
- 318-20-A—Pier between North 4th and 5th streets, East River, Brooklyn.
- 352-20-A—Pier 3, Wallabout basin, foot of Washington and E streets, Brooklyn.
- 353-20-A—Pier 2, Wallabout basin, foot of Washington and F streets, Brooklyn.
- 383-20-A—Pier 20, East River Manhattan.
- 420-20-A—Pier 5, between Poplar and Middagh streets, Brooklyn.
- 421-20-A—Pier 22, foot of Atlantic avenue, Brooklyn.
- 422-20-A—Pier 29, foot of Harrison street, Brooklyn.

- 423-20-A—Pier 32, foot of Degraw street, Brooklyn.
- 471-20-A—Pier between North 4th and 5th streets, Brooklyn.
- 907-21-A—East side South street, foot of Dover street, Manhattan.
- 1205-21-A—Pier No. 21, East River, east side South street, foot of Dover street, Manhattan.
- 1302-21-A—Pier 15, East River, Manhattan.
- 1541-21-A—Pier 3, between Main and Dock streets, Brooklyn.
- 1542-21-A—Pier 3, between Main and Dock Streets, Brooklyn.
- 1543-21-A—Pier 2, between Main and Dock streets, Brooklyn.
- 1544-21-A—Pier 2, between Main and Dock streets, Brooklyn.
- 1545-21-A—Pier 2, between Main and Dock streets, Brooklyn.

BOARD OF STANDARDS AND APPEALS.

Appliances Submitted for Approval.

- 53-21-S—Angle Hose Valve.
- 1372-21-S—Ford Fire Line Reducing Valve, approval of.
- 1636-21-SA—Gilbert & Barker Oil Burner.
- 337-22-S—Elkhard Brass Company, Siamese Connection, approval of.
- 357-22-S—Quinn Acme Crude Oil Burner, approval of.
- 392-22-S—The Surface-Combustion Company Low Pressure Gas and Oil Burner, approval of.
- 447-22-S—Howard Water Pressure Reducing Devices, approval of.
- 610-22-S—Crocker Gas Valve, approval of.
- 799-22-S—Kennell Gas Cut-Off Valve, approval of.
- 957-22-S—Burnwell Mechanical Burner, approval of.
- 1104-22-S—Dean Fuel Oil Pump, approval of.
- 1105-22-S—Combustion Fuel Oil Burner, approval of.
- 1173-22-S—Anti-Syphon Valve, approval of.
- 1230-22-S—Thermostats for Automatic Fire Alarm System, approval of.
- 1249-22-S—Coen Oil Burner, approval of.
- 1274-22-S—Rodriguez Oil Burner, approval of.
- 1391-22-S—Dempsey High & Low Pressure Fuel Oil Burner, approval of.
- 1395-22-S—Caloroil Burner, approval of.
- 1526-22-S—Delaney Fuel Oil Burner, approval of.
- 57-23-SA—Collin Patent Automatic Gas Cut-Off Valve, approval of.
- 92-23-SA—Surface Combustion Low Pressure Fuel Oil Burner, approval of.
- 124-23-SA—Master Gas Shut-Off Valve, approval of.
- 125-23-SA—Packless Gas Shut-Off Valve, approval of.
- 127-23-SA—S. & K. Gas Shut-Off Valve, approval of.
- 232-23-SA—Manual and Thermal Gas Cut-Off Valve.
- 275-23-SA—Wm. E. Toelle Manual & Automatic Gas Shut-Off Valve, approval of.
- 279-23-SA—Heil Standard 200 Gal. Truck Tank.
- 297-23-SA—"Automatic" Deluge Valve, approval of.
- 345-23-SA—Cornell Falat Oil Burner, approval of.
- 392-23-SA—"Billow" Class G. R. Oil Burner, approval of.

RESERVE CALENDAR

- 93-23-SA—"Billow" Class C. R. F. Oil Burner, approval of.
- 97-23-SA—Cornell No. 1 Type "A" Oil Burner, approval of.
- 43-23-SA—Automatic Gas Shut-Off, approval of.
- 25-23-SA—Tilman-White Gas Cut-Off Valve, approval of.
- 44-23-SA—Domestic Fuel Oil Burner, approval of.
- 88-23-SA—Lewis Oil Burner, approval of.
- 98-23-SA—Enco Type 700 Steam Atomizing Burner, approval of.
- 52-23-SA—Automatic Gas Cut-Off, approval of (Brooklyn Co.).
- 60-23-SA—Crescent Combustion Fuel Oil Burner, approval of.
- 46-23-SA—Frankfort Type "P" Low Pressure Oil Burner, approval of.
- 50-23-SA—Marsh Fuel Oil Burner and Pump, approval of.
- 46-23-SA—Pennsylvania Globe Oil Burner, approval of.
- 69-23-SA—Warren Fuel Oil Pumps & Heater Sets, approval of.
- 76-23-SA—Ziegler Oil Burner, approval of.

- 1359-24-SA—Oliver Oil Gas Burner No. 30-A, approval of.
- 1372-24-SA—Adga High Pressure Burner, approval of.
- 1395-24-SA—Deming Power Rotary Force Pump, approval of.
- 1500-24-SA—Smolensky Check Valve, approval of.
- 19-25-SA—Winslow Industrial Burner and Pump Unit, approval of.
- 26-25-SA—Keenan Brilliant Burner, approval of.
- 228-25-SA—Silent Glow Oil Burner, approval of.
- 242-25-SA—Derby Closed Circuit Automatic Sprinkler and Standpipe Supervisory Alarm Panel, approval of.
- 259-25-SA—Electrol Automatic Oil Burner.
- 340-25-SA—McCann-Harrison Low Pressure Oil Burner, approval of.

Cases listed in the Reserve Calendar are cases upon which action by the board has been deferred pending committee reports, of this board, court or department actions, and will remain thereon until the aforesaid reports, court or departmental actions are consummated. Whereupon the case or cases will be restored to the regular calendar and due notice of the date set for hearing will be mailed to the appellant, applicant or petitioner of record.

FORMS FOR NOTICES TO PROPERTY OWNERS

If applicants, under the building zone resolution, desire copies of Form 13A, for notices to property owners, such forms are not to be supplied by this office.

The applicant is entitled only to one copy of Form A, properly filled out.

If he desires additional copies for his own convenience in notifying property owners, he can obtain such copies from The O'Connell Press, 176 Park Row, Manhattan, at three cents each, postage to be added if the forms are to be supplied by mail.

WARNING.

Notice is hereby given to all petitioners, appellants and applicants for relief at the hands of the Board of Standards and Appeals and of the Board of Appeals, and to all lawyers, architects and engineers representing owners or lessees in proceedings before these boards—

First, That if they do not appear in person or by representative at the hearing on their case, dismissal for lack of prosecution is likely to result.

Second, That due and ample notice of the date set for hearing is provided in the publication in this BULLETIN of the calendars of these boards, each case being set down by Calendar Number and premises under the date of the hearing.

Third, That no plea of ignorance of the date of the hearing can be entertained in view of this publication and

of the posting of the calendars on the bulletin board in the offices of the board and of the further publication of the calendars in the daily press.

Fourth, That no one is entitled to written notice of the date for the hearing in his case, and that the plea of failure to receive such notice is no excuse for neglect to appear.

Fifth, That the business of these boards is to dispose of all cases promptly, for the reason that the pendency of an appeal or petition ties the hands of the administrative official in enforcing his order; therefore, no appeal or petition will be allowed to be hung up by reason of failure of the appellant or petitioner to file necessary data, or by any other method of delay.

OFFICE—Municipal Building, Rooms 1001 to 1015.

TELEPHONE—Worth 0184.

OFFICE HOURS—9 a. m. to 4 p. m. Saturdays, 9 a. m. to 12 noon.

All communications should be addressed to the chairman of the board.

CONTENTS

This issue of the Bulletin contains, in the order given—

- Docket.
- Call of Clerk's Calendar.
- The Trial Calendar.
- Notices in Building Zone Cases.
- Rules.
- Reserve Calendar.
- Progress Report.

DATES AND HOURS OF MEETING.

Board of Appeals, Tuesdays, at 10 a. m.
Special meetings as listed in this Calendar.
Call of Clerk's Calendar, Tuesdays, at 2 p. m.
Board of Standards and Appeals, as listed in the Calendar.
All hearings are held in Room 1013, Municipal Building, Manhattan.

HOURS FOR CONSULTATION.

10 A. M. to 1 P. M.

Any person desiring to consult the chairman or the engineers, pertaining to the work of either board, will be seen only between the hours of ten in the morning and one in the afternoon—Saturdays excepted.

CALL OF CLERK'S CALENDAR.

The Clerk's Calendar consists of applications under the Building Zone Resolution, and its object is to give interested property owners opportunity to file objections, if any, and will be called in Room 1013, Tuesday, September 8, 1925, at 2 o'clock. At this call each case is set for hearing on a definite day.

The next subsequent Call of the Calendar will be on Tuesday, September 15, 1925, at 2 o'clock.

The Clerk's Calendar is not to be confused with the calendar of cases that have been definitely set for hearing on fixed days.

NOTICE TO APPELLANTS AND PETITIONERS.

No appeal, application or petition will be entertained in connection with which court proceedings are pending or in progress, nor accepted that are not filed within twenty days from the date of the action of the Administrative Official.

Any communication purporting to be an appeal, application or petition shall be regarded as a mere notice of intention to seek relief until it is filed on the form required by the rules of this board.

Upon receipt of any such communication the writer will be supplied with the official forms for presenting his appeal, application or petition, and if he fails to supply the data required thereon, within twenty days, his case may be dismissed for lack of prosecution.

At the time of filing an application, the appellant or petitioner shall forward a signed notice of appeal addressed to the administrative official (either superintendent of buildings or fire commissioner) and file with this board a duplicate of said notice.

Petitioners are advised that their plans must indicate the points of the compass so as to establish the true location and position of the property, the subject of the appeal.

Appeals, applications and petitions will be simplified and expedited by conforming to these directions.

WILLIAM E. WALSH, Chairman.

CAL. NO. 1534-24-BZ—Application, December 30, 1924, under the building zone resolution, of William J. Conway, architect, on behalf of John Muldoon, owner, to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles; premises 64-68 West 9th street, Brooklyn.

CAL. NO. 87-25-BZ—Application, January 21, 1925, under the building zone resolution, of David L. Malbin, applicant, on behalf of Pasquale Sabbarese, owner, to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles; premises 617-633 Brooklyn avenue, Brooklyn.

CAL. NO. 306-25-BZ—Application, March 19, 1925, under the building zone resolution, of William Farrell, architect, Emil E. Gabler, owner, Casanova Nash Sales Corp., lessee, to permit in a business district the use and occupancy of a new building as a garage for the storage of more than five (5) motor vehicles; premises 700 Southern boulevard, northeast corner of Leggett avenue, The Bronx.

CAL. NO. 343-25-BZ—Application, March 30, 1925, under the building zone resolution, of Benjamin Bag, applicant, on behalf of Bay Ridge Building Materials Corporation, owner, to permit in a residence district the maintenance of a building material storage yard; premises 244 69th street, Brooklyn.

BOARD OF APPEALS.

Tuesday, October 6, 1925, at 10 a. m.

Appeal from Administrative Order.

510-25-A—102 71st street, Brooklyn.

Under the Building Zone Resolution.

NOTICE IS HEREBY GIVEN by the board of appeals of a public hearing under the provisions of the building zone resolution, *Tuesday morning, October 6, 1925, at 10 o'clock*, in Room 1013, Municipal Building, on the following matters:

CAL. NO. 1250-24-BZ—Application, October 21, 1924, under the building zone resolution, of Croker National Fire Prevention Engineering Co., for Anna M. Fischetti, owner, to permit in a residence district the maintenance of a garage for the storage of five (5) pleasure motor vehicles, four (4) spaces rented to persons not residing on the premises; premises 87 Clermont avenue, rear, Brooklyn.

CAL. NO. 1453-24-BZ—Application, December 9, 1924, under the building zone resolution, of John J. Dunnigan, applicant, on behalf of James Murphy, owner, to permit in a residence district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles; premises 24 Evelyn place, southeast corner of Davidson avenue, The Bronx.

CAL. NO. 97-25-BZ.—Application, January 23, 1925, under the building zone resolution, of Robert Kaplan, architect and engineer, on behalf of Ros-Sil Realty Corporation, owner, to permit in a business and "B" area district the maintenance of a rear yard less in depth than that required by the building zone resolution; premises 13 West 36th street, Manhattan.

CAL. NO. 484-25-BZ—Application, May 8, 1925, under the building zone resolution, of William F. Doyle, applicant, on behalf of Helen Pelcyger, owner, to permit in a residence district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles; premises 836-846 Crown street, southwest corner of Ford street, Brooklyn.

CAL. NO. 142-25-BZ.—Application, February 2, 1925, under the building zone resolution, of Irene

Thatcher, applicant and owner, to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles; premises northwest corner of Coney Island avenue and Avenue N, Brooklyn.

CAL. NO. 225-25-BZ—Application, February 25, 1925, under the building zone resolution, of Thomas O'Rourke Gallagher, applicant, on behalf of Mymaud Construction Co., owner, to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles; premises southwest corner of Metropolitan avenue and 125th street, Richmond Hill, Borough of Queens.

CAL. NO. 269-25-BZ—Application, March 10, 1925, under the building zone resolution, of William A. Giesen, architect, on behalf of Agnes Connolly, owner, to permit in a residence district the erection and maintenance of a garage for the storage of five (5) pleasure motor vehicles, four (4) spaces rented to persons not residing on the premises; premises 2805 Pond place, The Bronx.

CAL. NO. 447-25-BZ—Application, April 27, 1925, under the building zone resolution, of Benj. Driesler, Jr., architect, on behalf of Incorporated Parkway Builders, Inc., owner, to permit partly in a business district and partly in a residence district extending from an unrestricted district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles; premises 71-85 Caton place, Brooklyn.

CAL. NO. 423-25-BZ—Application, April 20, 1925, under the building zone resolution, of Samuel Schlauf, applicant, on behalf of Isabel Burger, owner, to permit in an "F" area district the erection of a building, the area of which is in excess of that permitted in such district; premises 123-02 and 123-08 Rockaway Beach boulevard, Rockaway Park, Borough of Queens.

WILLIAM E. WALSH, *Chairman.*

CONCRETE RULES

USE OF HYDRATED LIME IN CONCRETE.

Adopted by the Board of Standards and Appeals, April 19, 1920, under Cal. No. 153-20-S.

The use of hydrated lime in all classes of concrete construction shall not be prohibited when used in accordance with the conditions hereinafter set forth.

The hydrated lime shall conform with the standard specifications for this material which have been adopted by the American Society for Testing Materials.

The maximum amount of hydrated lime which may be used shall conform with the following table, all weights given being the amount of lime which may be incorporated

for each ninety-five pound bag of Portland cement.

1-1½-3 Mix, 4 pounds of hydrated lime per bag of cement.

1-2-4 Mix, 5 pounds of hydrated lime per bag of cement.

1-2½-5 Mix, 6 pounds of hydrated lime per bag of cement.

For hand mixed concrete, the hydrated lime and Portland cement shall be well mixed while dry.

Hydrated lime shall not be used in concrete which is to be deposited under water.

RULES

FIRE RETARDING RULES

Adopted by the Board of Standards and Appeals August 30, 1917; Amended November 1, 1917.

Rule 1. Fire Retarding Materials for Garages, Motor Vehicle Repair Shops and Oil Selling Stations. In garages, motor vehicle repair shops and oil selling stations any material or form of construction shall be deemed fire-retarding within the meaning of §73, subdivision 3, of the building code, that resists the action of flame and heat when subjected to a continuous fire for one hour at an average temperature of seventeen hundred (1700) degrees Fahrenheit without the passage of flame, and with a maximum temperature rise to four hundred (400) degrees Fahrenheit on the side away from the fire. The point at which the temperature of transmission is measured shall be protected from external air and weather conditions.

When the test specimen is in the form of partition construction, the area under test shall be not less than one hundred (100) square feet and least dimension shall be not less than nine (9) feet. When in the form of floor construction, the area under test shall be not less than two hundred (200) square feet and the least dimension shall be not less than fourteen (14) feet. During the fire, the floor construction shall support the live load for which it is designed, and after the fire shall safely sustain twice the designed live load with a maximum deflection of not more than one two-hundredth (1/200) part of the span.

Rule 2. Wood Joisted Floor Construction. Wood joisted floor construction shall be accepted as fire-retarding construction in non-fireproof buildings used as garages, motor vehicle repair shops or oil selling stations when the beams are protected on the upper and under sides with the fire-retarding materials specified in these rules for floor and ceiling coverings.

Rule 3. Floor Covering. Any one of the following forms of construction shall be accepted as fire-retarding for the covering of the upper sides of wood floor beams in joisted floor construction in non-fireproof buildings used as garages, motor vehicle repair shops or oil selling stations:

(a) Seven-eighths ($\frac{7}{8}$) inch wood underflooring protected with a membrane of two-ply waterproofing covered with not less than two and one-half ($2\frac{1}{2}$) inches of 1:2½:5 concrete or better, reinforced with not less than one-fourth ($\frac{1}{4}$) of one (1) per cent of steel mesh.

(b) Two and one-half ($2\frac{1}{2}$) inches of 1:2:4 concrete applied directly to the top of the joists, with or without temporary support, reinforced with not less than one-fourth of one per cent steel rods, mesh or steel lath, and having the tops of the joists coated with approved waterproof paint or protected by tar paper on the top and on the sides for a distance of three inches from the top. (Amendment, Nov. 1, 1917.)

Rule 4. Ceiling Covering. Any one of the following forms of construction shall be accepted as fire-retarding for the covering of the undersides of wood floor beams in joisted floor construction in non-fireproof buildings used as garages, motor vehicle repair shops or oil selling stations:

(a) One-half ($\frac{1}{2}$) inch plaster boards with pointed joints covered with No. 26 U. S. gauge sheet metal with one (1) inch lapped seams nailed to the wood beams when spaced not more than sixteen (16) inches on centers, or nailed to furring strips when the floor beams are spaced more than sixteen (16) inches on centers;

(b) Two thicknesses of one-quarter ($\frac{1}{4}$) inch asbestos board laid with tight staggered joints and nailed to the beams, when spaced not more than sixteen (16) inches on centers, or nailed to furring strips when the floor beams are more than sixteen (16) inches on centers.

(c) Metal lath weighing not less than three pounds per square yard, attached to furring strips and plastered with Portland cement mortar at least three-quarters ($\frac{3}{4}$) inch thick.

Rule 5. Attachment to Ceiling. Fire-retarding ceilings in non-fireproof buildings used as garages, motor vehicle repair shops or oil selling stations shall be attached to wood floor beams and girders in such manner as to maintain an air space between the wood beams, and all wood beams shall be seasoned before applying the protective coat.

Rule 6. Openings in Fire-Retarding Floors. Pipes or conduits which pass through floors shall be fitted with metal thimbles and made watertight for a height of three (3) inches above the floor.

Rule 7. Columns. All structural posts and columns in non-fireproof buildings required to be fire-retarded shall be protected with the fire-retarding materials specified for ceiling coverings in these rules, or with any of the materials accepted in fireproof construction; except that an air space shall not be required around steel or cast iron columns.

Where necessary for protection against mechanical injury, the fire-retarding protection on columns shall be jacketed to a height of five (5) feet from the ground with No. 4 U. S. gauge metal.

Rule 8. Girders. All girders in non-fireproof buildings required to be fire-retarded shall be protected with the fire-retarding materials specified for ceiling coverings in these rules, or with any of the materials acceptable in fireproof construction; except that an air space need not be provided around steel girders.

Rule 9. Shaft Enclosures. Existing stairways and vertical shafts in non-fireproof business buildings hereafter converted to be used as garages, motor vehicle repair shops or oil selling stations shall be enclosed in fire-retarding partitions continued through the non-fireproof floor construction, and when unfilled wood stud partitions are used, the space between the floor beams shall be fire-stopped with incombustible materials. All openings in such partitions shall be protected with accepted metal-covered fire doors or windows. Wherever necessary for protection against mechanical injury, the partition shall be jacketed to a height of five (5) feet on the garage side with No. 4 U. S. gauge metal. Any one of the following forms of partitions shall be accepted for the enclosure:

(a) Two by four inch wood studs, spaced not more than sixteen (16) inches on centers, covered both sides with metal lath weighing not less than three pounds per square yard, attached to furring strips and plastered with Portland cement mortar at least three-quarters ($\frac{3}{4}$) of an inch thick;

(b) Two by four inch wood studs spaced not more than sixteen (16) inches on centers, covered both sides with seven-eighths ($\frac{7}{8}$) inch wood sheathing, one-half ($\frac{1}{2}$) inch plaster boards with pointed joints and No. 26 U. S. gauge sheet metal with one-inch lapped seams;

(c) Two by four inch wood studs spaced not more than sixteen (16) inches on centers, covered both sides with seven-eighths ($\frac{7}{8}$) inch wood sheathing, two thicknesses of one-quarter ($\frac{1}{4}$) inch asbestos boards laid with tight staggered joints and jacketed with No. 16 U. S. gauge metal on the garage side to a height of five (5) feet.

(d) Two by four inch wood studs spaced not more than sixteen (16) inches on centers, filled in solidly between the studs with four inches of approved fireproof materials and covered on both sides with No. 26 U. S. gauge metal;

(e) Existing wood stud, lath and plaster partitions covered on the garage side with No. 26 U. S. gauge sheet metal with one-inch lapped seams.

Cases listed in the Reserve Calendar are cases upon which action by the board has been deferred pending committee reports, of this board, court or department actions, and will remain thereon until the aforesaid reports, court or departmental actions are consummated. Whereupon the case or cases will be restored to the regular calendar and due notice of the date set for hearing will be mailed to the appellant, applicant or petitioner of record.

FORMS FOR NOTICES TO PROPERTY OWNERS

If applicants, under the building zone resolution, desire copies of Form 13A, for notices to property owners, such forms are not to be supplied by this office.

The applicant is entitled only to one copy of Form 13A, properly filled out.

If he desires additional copies for his own convenience in notifying property owners, he can obtain such copies from The O'Connell Press, 176 Park Row, Manhattan, at three cents each, postage to be added if the forms are to be supplied by mail.

WARNING.

Notice is hereby given to all petitioners, appellants and applicants for relief at the hands of the Board of Standards and Appeals and of the Board of Appeals, and to all lawyers, architects and engineers representing owners or lessees in proceedings before these boards—

First, That if they do not appear in person or by representative at the hearing on their case, dismissal for lack of prosecution is likely to result.

Second, That due and ample notice of the date set for hearing is provided in the publication in this BULLETIN of the calendars of these boards, each case being set down by Calendar Number and premises under the date of the hearing.

Third, That no plea of ignorance of the date of the hearing can be entertained in view of this publication and

of the posting of the calendars on the bulletin board in the offices of the board and of the further publication of the calendars in the daily press.

Fourth, That no one is entitled to written notice of the date for the hearing in his case, and that the plea of failure to receive such notice is no excuse for neglect to appear.

Fifth, That the business of these boards is to dispose of all cases promptly, for the reason that the pendency of an appeal or petition ties the hands of the administrative official in enforcing his order; therefore, no appeal or petition will be allowed to be hung up by reason of failure of the appellant or petitioner to file necessary data, or by any other method of delay.

communications should be addressed to the chairman of the board.

CONTENTS

This issue of the Bulletin contains, in the order in—

Docket.
Call of Clerk's Calendar.
The Trial Calendar.
Notices in Building Zone Cases.
Rules.
Reserve Calendar.
Progress Report.

DATES AND HOURS OF MEETING.

Board of Appeals, Tuesdays, at 10 a. m.
Special meetings as listed in this Calendar.
Call of Clerk's Calendar, Tuesdays, at 2 p. m.
Board of Standards and Appeals, as listed in the Calendar.
All hearings are held in Room 1013, Municipal Building, Manhattan.

HOURS FOR CONSULTATION.

10 A. M. to 1 P. M.

Any person desiring to consult the chairman or the engineers, pertaining to the work of either board, will be seen only between the hours of ten in the morning and one in the afternoon—Saturdays excepted.

CALL OF CLERK'S CALENDAR.

The Clerk's Calendar consists of applications under the Building Zone Resolution, and its object is to give interested property owners opportunity to file objections, if any, and will be called in Room 1013, Tuesday, September 8, 1925, at 2 o'clock. At this call each case is set for hearing on a definite day.

The next subsequent Call of the Calendar will be on Tuesday, September 15, 1925, at 2 o'clock.

The Clerk's Calendar is not to be confused with the calendar of cases that have been definitely set for hearing on fixed days.

NOTICE TO APPELLANTS AND PETITIONERS.

No appeal, application or petition will be entertained in connection with which court proceedings are pending or in progress, nor accepted that are not filed within twenty days from the date of the action of the Administrative Official.

Any communication purporting to be an appeal, application or petition shall be regarded as a mere notice of intention to seek relief until it is filed on the form required by the rules of this board.

Upon receipt of any such communication the writer will be supplied with the official forms for presenting his appeal, application or petition, and if he fails to supply the data required thereon, within twenty days, his case may be dismissed for lack of prosecution.

At the time of filing an application, the appellant or petitioner shall forward a signed notice of appeal addressed to the administrative official (either superintendent of buildings or fire commissioner) and file with this board a duplicate of said notice.

Petitioners are advised that their plans must indicate the points of the compass so as to establish the true location and position of the property, the subject of the appeal.

Appeals, applications and petitions will be simplified and expedited by conforming to these directions.

WILLIAM E. WALSH, Chairman.

CAL. NO. 1455-24-BZ—Application, December 9, 1924, under the building zone resolution, of Samuel Rosenblum, architect, Edlar Realty Corp., owner, A. Troskowsky, sub-lessee, to permit in a business district the maintenance of a motor vehicle repair shop; premises 34 Tieman place, Manhattan.

CAL. NO. 262-25-BZ—Application, March 9, 1925, under the building zone resolution, of Max N. Newman, applicant, on behalf of Irene Thatcher, owner, to permit in a residence district extending from a business district the erection and maintenance of a building to be used for store purposes; premises 1406-1414 Elm avenue, Brooklyn.

CAL. NO. 270-25-BZ—Application, March 10, 1925, under the building zone resolution, of John J. Dunnigan, applicant, on behalf of Schinasi Commercial Corp., to permit in a business district and within 200 ft. of a hospital the use and occupancy of an existing building as a garage for the storage of more than five (5) motor vehicles; premises 32-36 West 100th street, Manhattan.

CAL. NO. 359-25-BZ—Application, April 2, 1925, under the building zone resolution, of William H. Kehoe, applicant, on behalf of Horlick Realty Corp., owner, to permit in a business district the erection of a garage for the storage of more than five (5) motor vehicles; premises 1026-1042 Liberty avenue, southwest corner of Crescent street, Brooklyn.

CAL. NO. 363-25-BZ—Application, April 3, 1925, under the building zone resolution, of Alfred J. Boulton, applicant, on behalf of Rosa Morizio, owner, to permit in a residence district the erection and maintenance of a building to be used as a poultry slaughter house; premises east side of Private Right of Way, 226 ft. north of 84th street, Brooklyn.

CAL. NO. 389-25-BZ—Application, April 11, 1925, under the building zone resolution, of William F. Doyle, applicant, on behalf of Patrick Tague, owner, to permit partly in a residence district and partly in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles; premises 136-140 Hall street, Brooklyn.

CAL. NO. 405-25-BZ—Application, April 15, 1925, under the building zone resolution, of Magnuson & Kleinert, architects, for the 15th Street Amusement Company, owner, to permit in a residence district the erection and maintenance of a building to be used for theatre and store purposes; premises 187-8-9 Prospect Park West, southwest corner of 14th street, Brooklyn.

CAL. NO. 455-25-BZ—Application, April 29, 1925, under the building zone resolution, of Edward P. Doyle, applicant, on behalf of Gould Mersereau Company, owner, to permit in a business district the erection of a building and the use of more than 25 per cent of its total floor space for factory purposes; premises east side of

Nott avenue, 90 ft. east of Van Alst avenue, Long Island City, Borough of Queens.

CAL. NO. 474-25-BZ—Application, June 3, 1925, under the building zone resolution, of John De Hart, applicant, Mary A. Dalton, owner, Gussie Realty Co., Inc., lessee, to permit partly in a business district and partly in a residence district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles; premises 1145-1149 Ogden avenue, The Bronx.

CAL. NO. 314-25-BZ—Application, March 23, 1925, under the building zone resolution, of John De Hart, applicant, on behalf of the Estate of Fredk. Fischer, owner, to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles; premises 1160-1162 Intervale avenue, The Bronx.

CAL. NO. 490-25-BZ—Application, May 11, 1925, under the building zone resolution, of Philip J. Bendish, applicant and owner, to permit in a residence district the alteration of an existing garage for the storage of more than five (5) motor vehicles; premises 342 West 70th street, Manhattan.

CAL. NO. 497-25-BZ—Application, May 12, 1925, under the building zone resolution, of John W. Clancy, applicant, on behalf of Sally C. Crane, owner, to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles; premises 2180-2182 Folin street, The Bronx.

WILLIAM E. WALSH, *Chairman.*

BOARD OF APPEALS

SPECIAL MEETING.

Tuesday, September 22, 1925, at 2 p. m.

Under the Building Zone Resolution.

NOTICE IS HEREBY GIVEN by the board of appeals of a public hearing under the provisions of the building zone resolution, *Tuesday afternoon, September 22, 1925, at 2 o'clock, in Room 1013, Municipal Building, on the following matter:*

CAL. NO. 486-25-BZ.—Application, May 8, 1925, under the building zone resolution, of Louis A. Sheinart, architect, on behalf of Estate of George Friedland, owner, to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles; premises 113-117 Chrystie street, Manhattan.

WILLIAM E. WALSH, *Chairman.*

 156-25-A—51 Henry street, Winfield, L. I., Queens.
 161-25-A—106-110 Seventh avenue, Manhattan.

Under the Building Zone Resolution.

NOTICE IS HEREBY GIVEN by the board of appeals of a public hearing under the provisions of the building zone resolution, *Tuesday morning, September 29, 1925, at 10 o'clock, in Room 1013, Municipal Building, on the following matters:*

CAL. NO. 85-25-BZ—Application, January 21, 1925, under the building zone resolution, of William F. Doyle, applicant, on behalf of Michael T. Watts, lessee, to permit partly in a business district and partly in a residence district the maintenance of an open garage parking space for the storage of more than five (5) motor vehicles; premises 332 West 57th street, Manhattan.

CAL. NO. 298-25-BZ—Application, March 18, 1925, under the building zone resolution, of William F. Doyle, applicant, on behalf of William Drosihn, Jr., owner, to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles; premises 234-238 East 85th street, Manhattan.

CAL. NO. 1091-24-BZ—Application, September 2, 1924, under the building zone resolution, of John W. Clancy, applicant, on behalf of Valballe Corporation, owner, to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles; premises 341 East 184th street, northwest corner of Marion avenue, The Bronx.

CAL. NO. 402-25-BZ—Application, April 14, 1925, under the building zone resolution, of William F. Doyle, applicant, on behalf of Emma A. Justice, owner, to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles; premises southeast corner of East 182nd street and Folin street, The Bronx.

CAL. NO. 429-25-BZ—Application, April 21, 1925, under the building zone resolution, of Samuel Gardstein, architect, on behalf of Isabelle Weber, owner, to permit in a residence district extending from a business district the erection and maintenance of a residence building to be used for store purposes on the first story; premises 2374-2376 60th street, Brooklyn.

CAL. NO. 551-25-BZ—Application, May 27, 1925, under the building zone resolution, of Alfred H. Eccles, architect, on behalf of Henry

Hellenek, owner, to permit in a business district and also within 200 ft. of a school, the erection and maintenance of a garage for the storage of more than five (5) motor vehicles; premises south side of Patterson avenue, 50 ft. west of Ely avenue, Astoria, Borough of Queens.

CAL. NO. 1534-24-BZ—Application, December 30, 1924, under the building zone resolution, of William J. Conway, architect, on behalf of John Muldoon, owner, to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles; premises 64-68 West 9th street, Brooklyn.

CAL. NO. 87-25-BZ—Application, January 21, 1925, under the building zone resolution, of David L. Malbin, applicant, on behalf of Pasquale Sabbarese, owner, to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles; premises 617-633 Brooklyn avenue, Brooklyn.

CAL. NO. 306-25-BZ—Application, March 19, 1925, under the building zone resolution, of William Farrell, architect, Emil E. Gabler, owner, Casanova Nash Sales Corp., lessee, to permit in a business district the use and occupancy of a new building as a garage for the storage of more than five (5) motor vehicles; premises 700 Southern boulevard, northeast corner of Leggett avenue, The Bronx.

CAL. NO. 343-25-BZ—Application, March 30, 1925, under the building zone resolution, of Benjamin Bag, applicant, on behalf of Bay Ridge Building Materials Corporation, owner, to permit in a residence district the maintenance of a building material storage yard; premises 244 69th street, Brooklyn.

BOARD OF APPEALS.

*Tuesday, October 6, 1925, at 10 a. m.
Appeal from Administrative Order.*

510-25-A—102 71st street, Brooklyn.

Under the Building Zone Resolution.

NOTICE IS HEREBY GIVEN by the board of appeals of a public hearing under the provisions of the building zone resolution, *Tuesday morning, October 6, 1925, at 10 o'clock*, in Room 1013, Municipal Building, on the following matters:

CAL. NO. 1250-24-BZ—Application, October 21, 1924, under the building zone resolution, of Croker National Fire Prevention Engineering Co., for Anna M. Fischetti, owner, to permit in a residence district the maintenance of a garage for the storage of five (5) pleasure motor vehicles, four (4) spaces rented to persons not residing on the premises; premises 87 Clermont avenue, rear, Brooklyn.

CAL. NO. 1453-24-BZ—Application, December 9, 1924, under the building zone resolution, of John J. Dunnigan, applicant, on behalf of James Murphy, owner, to permit in a residence district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles; premises 24 Evelyn place, southeast corner of Davidson avenue, The Bronx.

CAL. NO. 97-25-BZ.—Application, January 23, 1925, under the building zone resolution, of Robert Kaplan, architect and engineer, on behalf of Ros-Sil Realty Corporation, owner, to permit in a business and "B" area district the maintenance of a rear yard less in depth than that required by the building zone resolution; premises 13 West 36th street, Manhattan.

CAL. NO. 484-25-BZ—Application, May 8, 1925, under the building zone resolution, of William F. Doyle, applicant, on behalf of Helen Pelcyger, owner, to permit in a residence district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles; premises 836-846 Crown street, southwest corner of Ford street, Brooklyn.

CAL. NO. 142-25-BZ.—Application, February 2, 1925, under the building zone resolution, of Irene

Thatcher, applicant and owner, to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles; premises northwest corner of Coney Island avenue and Avenue N, Brooklyn.

CAL. NO. 225-25-BZ—Application, February 25, 1925, under the building zone resolution, of Thomas O'Rourke Gallagher, applicant, on behalf of Mymaud Construction Co., owner, to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles; premises southwest corner of Metropolitan avenue and 125th street, Richmond Hill, Borough of Queens.

CAL. NO. 269-25-BZ—Application, March 10, 1925, under the building zone resolution, of William A. Giesen, architect, on behalf of Agnes Connolly, owner, to permit in a residence district the erection and maintenance of a garage for the storage of five (5) pleasure motor vehicles, four (4) spaces rented to persons not residing on the premises; premises 2805 Pond place, The Bronx.

CAL. NO. 447-25-BZ—Application, April 27, 1925, under the building zone resolution, of Benj. Driesler, Jr., architect, on behalf of Incorporated Parkway Builders, Inc., owner, to permit partly in a business district and partly in a residence district extending from an unrestricted district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles; premises 71-85 Caton place, Brooklyn.

CAL. NO. 423-25-BZ—Application, April 20, 1925, under the building zone resolution, of Samuel Schlau, applicant, on behalf of Isabel Burger, owner, to permit in an "F" area district the erection of a building, the area of which is in excess of that permitted in such district; premises 123-02 and 123-08 Rockaway Beach boulevard, Rockaway Park, Borough of Queens.

WILLIAM E. WALSH, *Chairman.*

CONCRETE RULES

USE OF HYDRATED LIME IN CONCRETE.

Adopted by the Board of Standards and Appeals, April 19, 1920, under Cal. No. 153-20-S.

The use of hydrated lime in all classes of concrete construction shall not be prohibited when used in accordance with the conditions hereinafter set forth.

The hydrated lime shall conform with the standard specifications for this material which have been adopted by the American Society for Testing Materials.

The maximum amount of hydrated lime which may be used shall conform with the following table, all weights given being the amount of lime which may be incorporated

for each ninety-five pound bag of Portland cement.

1-1½-3 Mix, 4 pounds of hydrated lime per bag of cement.

1-2-4 Mix, 5 pounds of hydrated lime per bag of cement.

1-2½-5 Mix, 6 pounds of hydrated lime per bag of cement.

For hand mixed concrete, the hydrated lime and Portland cement shall be well mixed while dry.

Hydrated lime shall not be used in concrete which is to be deposited under water.

RULES

FIRE RETARDING RULES

adopted by the Board of Standards and Appeals August 30, 1917; Amended November 1, 1917.

Rule 1. Fire Retarding Materials for Garages, Motor Vehicle Repair Shops and Oil Selling Stations. In garages, motor vehicle repair shops and oil selling stations any material or form of construction shall be deemed fire-retarding within the meaning of §73, subdivision 3, of the building code, that resists the action of flame and heat when subjected to a continuous fire for one hour at an average temperature of seventeen hundred (1700) degrees Fahrenheit without the passage of flame, and with a maximum temperature rise to four hundred (400) degrees Fahrenheit on the side away from the fire. The point at which the temperature of transmitted heat is measured shall be protected from external air and weather conditions.

When the test specimen is in the form of partition construction, the area under test shall be not less than one hundred (100) square feet and least dimension shall be not less than nine (9) feet. When in the form of floor construction, the area under test shall be not less than two hundred (200) square feet and the least dimension shall be not less than fourteen (14) feet.

During the fire, the floor construction shall support the live load for which it is designed, and after the fire shall safely sustain twice the designed live load with a maximum deflection of not more than one two-hundredth ($1/200$) part of the span.

Rule 2. Wood Joisted Floor Construction. Wood joisted floor construction shall be accepted as fire-retarding construction in non-fireproof buildings used as garages, motor vehicle repair shops or oil selling stations when the beams are protected on the upper and under sides with the fire-retarding materials specified in rules for floor and ceiling coverings.

Rule 3. Floor Covering. Any one of the following forms of construction shall be accepted as fire-retarding for the covering of the upper sides of wood floor beams in joisted floor construction in non-fireproof buildings used as garages, motor vehicle repair shops or oil selling stations:

(a) Seven-eighths ($7/8$) inch wood underflooring protected with a membrane of two-ply waterproofing covered with not less than two and one-half ($2\frac{1}{2}$) inches of 1:2½:5 concrete or better, reinforced with not less than one-fourth ($1/4$) of one (1) per cent of steel mesh.

(b) Two and one-half ($2\frac{1}{2}$) inches of 1:2:4 concrete applied directly to the top of the joists, with or without temporary support, reinforced with not less than one-fourth of one per cent steel rods, mesh or steel lath, and having the tops of the joists coated with approved waterproof paint or protected by tar paper on the top and on the sides for a distance of three inches from the top. (Amendment, Nov. 1, 1917.)

Rule 4. Ceiling Covering. Any one of the following forms of construction shall be accepted as fire-retarding for the covering of the undersides of wood floor beams in joisted floor construction in non-fireproof buildings used as garages, motor vehicle repair shops or oil selling stations:

(a) One-half ($1/2$) inch plaster boards with pointed joints covered with No. 26 U. S. gauge sheet metal with one (1) inch lapped seams nailed to the wood beams when spaced not more than sixteen (16) inches on centers, or nailed to furring strips when the floor beams are spaced more than sixteen (16) inches on centers;

(b) Two thicknesses of one-quarter ($1/4$) inch asbestos board laid with tight staggered joints and nailed to the beams, when spaced not more than sixteen (16) inches on centers, or nailed to furring strips when the floor beams are more than sixteen (16) inches on centers.

(c) Metal lath weighing not less than three pounds per square yard, attached to furring strips and plastered with Portland cement mortar at least three-quarters ($3/4$) inch thick.

Rule 5. Attachment to Ceiling. Fire-retarding ceilings in non-fireproof buildings used as garages, motor vehicle repair shops or oil selling stations shall be attached to wood floor beams and girders in such manner as to maintain an air space between the wood beams, and all wood beams shall be seasoned before applying the protective coat.

Rule 6. Openings in Fire-Retarding Floors. Pipes or conduits which pass through floors shall be fitted with metal thimbles and made watertight for a height of three (3) inches above the floor.

Rule 7. Columns. All structural posts and columns in non-fireproof buildings required to be fire-retarded shall be protected with the fire-retarding materials specified for ceiling coverings in these rules, or with any of the materials accepted in fireproof construction; except that an air space shall not be required around steel or cast iron columns.

Where necessary for protection against mechanical injury, the fire-retarding protection on columns shall be jacketed to a height of five (5) feet from the ground with No. 4 U. S. gauge metal.

Rule 8. Girders. All girders in non-fireproof buildings required to be fire-retarded shall be protected with the fire-retarding materials specified for ceiling coverings in these rules, or with any of the materials acceptable in fireproof construction; except that an air space need not be provided around steel girders.

Rule 9. Shaft Enclosures. Existing stairways and vertical shafts in non-fireproof business buildings hereafter converted to be used as garages, motor vehicle repair shops or oil selling stations shall be enclosed in fire-retarding partitions continued through the non-fireproof floor construction, and when unfilled wood stud partitions are used, the space between the floor beams shall be fire-stopped with incombustible materials. All openings in such partitions shall be protected with accepted metal-covered fire doors or windows. Wherever necessary for protection against mechanical injury, the partition shall be jacketed to a height of five (5) feet on the garage side with No. 4 U. S. gauge metal. Any one of the following forms of partitions shall be accepted for the enclosure:

(a) Two by four inch wood studs, spaced not more than sixteen (16) inches on centers, covered both sides with metal lath weighing not less than three pounds per square yard, attached to furring strips and plastered with Portland cement mortar at least three-quarters ($3/4$) of an inch thick;

(b) Two by four inch wood studs spaced not more than sixteen (16) inches on centers, covered both sides with seven-eighths ($7/8$) inch wood sheathing, one-half ($1/2$) inch plaster boards with pointed joints and No. 26 U. S. gauge sheet metal with one-inch lapped seams;

(c) Two by four inch wood studs spaced not more than sixteen (16) inches on centers, covered both sides with seven-eighths ($7/8$) inch wood sheathing, two thicknesses of one-quarter ($1/4$) inch asbestos boards laid with tight staggered joints and jacketed with No. 16 U. S. gauge metal on the garage side to a height of five (5) feet.

(d) Two by four inch wood studs spaced not more than sixteen (16) inches on centers, filled in solidly between the studs with four inches of approved fireproof materials and covered on both sides with No. 26 U. S. gauge metal;

(e) Existing wood stud, lath and plaster partitions covered on the garage side with No. 26 U. S. gauge sheet metal with one-inch lapped seams.

Cases listed in the Reserve Calendar are cases upon which action by the board has been deferred pending committee reports, of this board, court or department actions, and will remain thereon until the aforesaid reports, court or departmental actions are consummated. Whereupon the case or cases will be restored to the regular calendar and due notice of the date set for hearing will be mailed to the appellant, applicant or petitioner of record.

FORMS FOR NOTICES TO PROPERTY OWNERS

If applicants, under the building zone resolution, desire copies of Form 13A, for notices to property owners, such forms are not to be supplied by this office. The applicant is entitled only to one copy of Form 13A, properly filled out.

If he desires additional copies for his own convenience in notifying property owners, he can obtain such copies from The O'Connell Press, 176 Park Row, Manhattan, at three cents each, postage to be added if the forms are to be supplied by mail.

WARNING.

Notice is hereby given to all petitioners, appellants and applicants for relief at the hands of the Board of Standards and Appeals and of the Board of Appeals, and to all lawyers, architects and engineers representing owners or lessees in proceedings before these boards—

First, That if they do not appear in person or by representative at the hearing on their case, dismissal for lack of prosecution is likely to result.

Second, That due and ample notice of the date set for hearing is provided in the publication in this BULLETIN of the calendars of these boards, each case being set down by Calendar Number and premises under the date of the hearing.

Third, That no plea of ignorance of the date of the hearing can be entertained in view of this publication and

of the posting of the calendars on the bulletin board in the offices of the board and of the further publication of the calendars in the daily press.

Fourth, That no one is entitled to written notice of the date for the hearing in his case, and that the plea of failure to receive such notice is no excuse for neglect to appear.

Fifth, That the business of these boards is to dispose of all cases promptly, for the reason that the pendency of an appeal or petition ties the hands of the administrative official in enforcing his order; therefore, no appeal or petition will be allowed to be hung up by reason of failure of the appellant or petitioner to file necessary data, or by any other method of delay.

CONTENTS

This issue of the Bulletin contains, in the order
in—

Docket.
Call of Clerk's Calendar.
The Trial Calendar.
Notices in Building Zone Cases.
Minutes of Meeting, Board of Appeals, September
8, 1925.
Minutes of Special Meeting, Board of Appeals, Sep-
tember 8, 1925.
Rules.
Notice of Public Hearing.
Progress Report.

DATES AND HOURS OF MEETING.

Board of Appeals, Tuesdays, at 10 a. m.
Special meetings as listed in this Calendar.
Call of Clerk's Calendar, Tuesdays, at 2 p. m.
Board of Standards and Appeals, as listed in the Cal-
endar.
All hearings are held in Room 1013, Municipal Building,
Manhattan.

HOURS FOR CONSULTATION.

10 A. M. to 1 P. M.

Any person desiring to consult the chairman or the en-
gineers, pertaining to the work of either board, will be
seen only between the hours of ten in the morning and one
in the afternoon—Saturdays excepted.

CALL OF CLERK'S CALENDAR.

The Clerk's Calendar consists of applications under the
Building Zone Resolution, and its object is to give inter-
ested property owners opportunity to file objections, if any,
and will be called in Room 1013, Tuesday, September 15,
1925, at 2 o'clock. At this call each case is set for hearing
on a definite day. **SEP 22 1925**

The next subsequent Call of the Calendar will be on
Tuesday, September 22, 1925, at 2 o'clock.

The Clerk's Calendar is not to be confused with the
calendar of cases that have been definitely set for hearing
on fixed days.

NOTICE TO APPELLANTS AND PETITIONERS.

No appeal, application or petition will be entertained in
connection with which court proceedings are pending or in
progress, nor accepted that are not filed within twenty
days from the date of the action of the Administrative Of-
ficial.

Any communication purporting to be an appeal, applica-
tion or petition shall be regarded as a mere notice of in-
tention to seek relief until it is filed on the form required
by the rules of this board.

Upon receipt of any such communication the writer will
be supplied with the official forms for presenting his ap-
peal, application or petition, and if he fails to supply the
data required thereon, within twenty days, his case may be
dismissed for lack of prosecution.

At the time of filing an application, the appellant or peti-
tioner shall forward a signed notice of appeal addressed
to the administrative official (either superintendent of build-
ings or fire commissioner) and file with this board a dupli-
cate of said notice.

Petitioners are advised that their plans must indicate the
points of the compass so as to establish the true location and
position of the property, the subject of the appeal.

Appeals, applications and petitions will be simplified and
expedited by conforming to these directions.

WILLIAM E. WALSH, Chairman.

Negative 0
Absent: Mr. Kennedy 1

316-25-A.
APPELLANT—John J. Gilmartin, for National Licorice Company, owner.
SUBJECT—Appeal from order of fire commissioner.
PREMISES AFFECTED—106-116 John street and 227-237 Plymouth street, Brooklyn.

APPEARANCES—

For Appellant: John J. Gilmartin.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Appeal granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Dowd, Gunnison, Holland, Connell and Fire Chief Kenlon 6
Negative 0
Absent: Mr. Kennedy 1

THE RESOLUTION:

(316-25-A)

WHEREAS, John J. Gilmartin, for National Licorice Co., owner, filed, March 23, 1925, an appeal, with the board of appeals, from an order of the fire commissioner; affecting premises 106-116 John street and 227-237 Plymouth street, Brooklyn; and

WHEREAS, the order of the fire commissioner, dated January 12, 1925, reads:

"Order No. 70248-F:

"1. Install a standpipe system with risers 4 inches in diameter, tested to withstand a pressure of 300 lbs. per square inch, extending from cellar to roof, with necessary check valves and 2½-inch regulation Fire Department outlets on each story (including basements, cellars and roofs), placed within main stairway enclosure. Each outlet to be provided with sufficient feet of 2½ inch standard hose attached thereto.";

and

WHEREAS, the building is of mill construction, five stories in height, 82 ft. on Plymouth street, 123 ft. on John street by 200 ft. deep; about 17,600 sq. ft. in area; OCCUPIED for the purpose of manufacturing licorice; about 50 persons on a floor; and

WHEREAS, the appellant claims the building is equipped with fire escapes on each street front, a standard sprinkler system fed by a gravity tank of 25,000 gallons and a 6 in. connection to the street main; he further contends the building has adequate fire protection, and requests that the standpipe order be rescinded.

Resolved, that the order of the fire commissioner be and it hereby is modified, and the appeal be and it hereby is granted on condition that an approved wet sprinkler system shall be maintained, together with central office connection; and granted only so long as present conditions, operation and use remain substantially unchanged.

446-24-A.
APPELLANT—F. P. Keniston, for Metropolitan Tobacco Co., owner.
SUBJECT—Appeal from order of fire commissioner.
PREMISES AFFECTED—22-34 Bergen avenue, Borough of Queens.

APPEARANCES—

For Appellant: F. P. Keniston.

For Administration: Inspector Lynch of fire department.

MINUTES

ACTION OF BOARD—Appeal granted on condition.
CONDITIONS—As specified in resolution.
THE VOTE—

Affirmative: Chairman Walsh, Messrs.
Dowd, Gunnison, Holland, Connell and
Fire Chief Kenlon 6
Negative 0
Absent: Mr. Kennedy 1

THE RESOLUTION:

(446-25-A)

WHEREAS, F. P. Keniston, for Metropolitan Tobacco Co., owner, filed, April 27, 1925, an appeal, with the board of appeals, from an order of the fire commissioner, affecting premises 22-34 Bergen avenue, Borough of Queens; and

WHEREAS, the order of the fire commissioner, dated March 30, 1925, reads:

"3. Install a 4 in. standpipe in accordance with the requirements of Section 581, Chapter 5, C. O., N. Y. Plans and specifications to be filed with and approved by the Fire Dept. before the work of installing standpipe is commenced.";

and

WHEREAS, the building is non-fireproof, two stories in height, 160 ft. by 93 ft. and 115 ft. 9 in. (irregular) in depth, about 15,000 square feet in area. OCCUPIED: 1st story, office, garage and tobacco storage; 2nd story, superintendent's apartment; and

WHEREAS, the appellant claims the building is under constant supervision, that there is no manufacturing done on the premises, and proposes to install a 2½ in. standpipe system in the garage portion of the building in lieu of the 4 in. standpipe system throughout the building; he requests the board to modify the order to such extent.

Resolved, that the order of the fire commissioner be and it hereby is modified, and the appeal be and it hereby is granted on condition that a 2½ in. standpipe system shall be installed and maintained within the garage area; that the garage use shall be restricted to the conduct of the business operated on premises; that any openings between the garage area and the adjoining areas shall be protected with approved standard fire doors.

450-25-A.

APPELLANT—Samuel Rosenblum, for John J. Deery & Co., owner.

SUBJECT—Appeal from order of fire commissioner.

PREMISES AFFECTED—373 Vernon avenue, Long Island City.

APPEARANCES—

For Appellant: Samuel Rosenblum.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Appeal granted on condition.
CONDITIONS—As specified in resolution

THE VOTE—

Affirmative: Chairman Walsh, Messrs.
Dowd, Gunnison, Holland, Connell and
Fire Chief Kenlon 6
Negative 0
Absent: Mr. Kennedy 1

THE RESOLUTION:

(450-25-A)

WHEREAS, Samuel Rosenblum, for John J. Deery & Co., owner, filed, April 27, 1925, an appeal, with the board of appeals, from an order of the fire commissioner, affecting premises 373 Vernon avenue, Long Island City, Borough of Queens; and

WHEREAS, the order of the fire commissioner reads:

"1. Install a standpipe system with risers 4 inches in diameter tested to withstand a pressure of 300 lbs. per sq. in. extending from cellar to roof, with necessary check valves and 2½ inch regulation Fire Department outlets on each story (including basements, cellars and roofs) placed within main stairway enclosure.

Each outlet to be provided with sufficient feet of 2½ inch standard hose attached thereto.";

and

WHEREAS, the building is frame, one story (65 ft. at peak of roof) in height, 95 ft. 2 in. by 290 ft. (approximately 27,000 sq. ft.) in area; OCCUPIED as a stone works, persons; and

WHEREAS, appellant contends that the use of the building is not hazardous, being used for the cutting and storage of stone, and that the premises is accessible from all sides and that water is used in the process of cutting the stone.

Resolved, that the order of the fire commissioner be and it hereby is modified, and the appeal be and it hereby is granted on condition and only so long as the present use of the premises shall be maintained and operated as a stone plant and yard.

459-25-A.

APPELLANT—Olga Realty Co., Inc., owner.

SUBJECT—Appeal from order of fire commissioner.

PREMISES AFFECTED—646-654 Vernon avenue
L. I. C., Borough of Queens.

APPEARANCES—

For Appellant: Jacob S. Friedman.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Appeal granted on condition.
CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs.
Dowd, Gunnison, Holland, Connell and
Fire Chief Kenlon 6
Negative 0
Absent: Mr. Kennedy 1

THE RESOLUTION:

(459-25-A)

WHEREAS, Olga Realty Co., Inc., owner, filed, April 30, 1925, an appeal, with the board of appeals, from an order of the fire commissioner, affecting premises 646-654 Vernon avenue, L. I. C., Borough of Queens; and

WHEREAS, the order of the fire commissioner, dated April 7, 1925, reads:

"Item No. 1. Install a standpipe system with risers 4 inches in diameter tested to withstand a pressure of 300 lbs. per square inch, extending from cellar to roof, with necessary check valves and 2½ inch regulation Fire Department outlets on each story (including basements, cellars and roofs), placed within main stairway enclosure. Each outlet to be provided with sufficient feet of 2½ inch standard hose attached thereto.

"Such standpipe shall be kept constantly filled with water by means of an approved tank or pump supply and be ready for use at all times. Standpipe to be connected with two-way, 3 inch siamese connection with double clapper valves and caps and signs, placed on street front of building at least 18 inches and not more than two feet above sidewalk in a horizontal position, accessible to the Fire Department. All connections to be of regulation Fire Department pattern and sizes. Sec. 581, Ch. 5, Code of Ordinances.";

and

WHEREAS, the building is non-fireproof, one story in height, 125 ft. by 100 ft. (approximately 12,000 sq. ft.) in area; OCCUPIED as a marble factory; and

WHEREAS, appellant contends that the nature of the business conducted on the premises is non-hazardous; that the machinery used is equipped with water lines supplying the water used in fabricating marble; that a city fire hydrant is in the immediate vicinity and proposes to install a portable fire extinguisher, of a sufficient capacity, on wheels.

Resolved, that the order of the fire commissioner be and it hereby is modified, and the appeal be and it hereby is granted so long as premises shall be maintained and used for the conduct and operation of a marble-cutting and finishing plant.

3-25-A.
APPELLANT—Samuel Rosenblum, for Max Goldberg, owner.

SUBJECT—Appeal from order of fire commissioner.
PREMISES AFFECTED—45-47 Crosby street, Manhattan.

APPEARANCES—

For Appellant: Samuel Rosenblum.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Appeal granted on condition.
CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs.

Dowd, Gunnison, Holland, Connell and

Fire Chief Kenlon 6

Negative 0

Absent: Mr. Kennedy 1

THE RESOLUTION:

(463-25-A)

WHEREAS, Samuel Rosenblum, for Max Goldberg, owner, filed, May 1, 1925, an appeal, with the board of appeals, from an order of the fire commissioner, affecting premises 45-47 Crosby street, Manhattan; and

WHEREAS, the order of the fire commissioner, dated April 1925, reads:

"1. Install a standpipe system with risers 4 inches in diameter tested to withstand a pressure of 300 lbs. per square inch, extending from cellar to roof, with necessary check valves and 2½ inch regulation Fire Department outlets on each story (including basements, cellars and roofs) placed within main stairway enclosure. Each outlet to be provided with sufficient feet of 2½ inch standard hose attached thereto."

WHEREAS, the building is non-fireproof, seven stories (85 ft. 4½ in. at the front and 86 ft. at the center) in height, 4½ ft. 1 in. by 100 ft. 4 in. in area at 1st story and 50 ft. 1 in. by 90 ft. in area above; OCCUPIED as a tenement factory, 106 persons above the 1st story; EQUIPPED with an automatic sprinkler system supplied by a 12,500 gallon gravity tank and also a 7,500 gallon pressure tank; there is a gas shut-off valve and also a fire alarm signal system installed in the premises; and

WHEREAS, appellant contends that the building is adequately provided with exits and that the greatest height of the premises is only one foot above the legal requirement for a standpipe system.

Resolved, that the order of the fire commissioner be and it hereby is modified, and the appeal be and it hereby is granted on condition that an approved wet sprinkler system shall be maintained with central office connection; that the building shall not be extended in height and area; and granted so long as the present use and occupancy remain substantially unchanged.

3-25-A.

APPELLANT—John E. Peabody, for Peabody & Babcock, Inc., lessee.

SUBJECT—Appeal from order of fire commissioner.
PREMISES AFFECTED—120-124 West 57th street, Manhattan.

APPEARANCES—

For Appellant: John E. Peabody.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Appeal granted on condition.
CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs.

Dowd, Gunnison, Holland, Connell and

Fire Chief Kenlon 6

Negative 0

Absent: Mr. Kennedy 1

THE RESOLUTION:

(303-25-A)

WHEREAS, John E. Peabody, for Peabody & Babcock, lessee, filed, March 19, 1925, an appeal, with the board of appeals, from an order of the fire commissioner, affecting premises 120-124 West 57th street, Manhattan; and

WHEREAS, the order of the fire commissioner, dated October 23, 1924, reads:

"Order No. 66272-F:

"1. Install an adequate interior electric fire alarm system in accordance with the attached approved layout. Sec. 21, Ch. 12, Code of Ordinances."

and

WHEREAS, the building is fireproof, 12 stories in height, 60 ft. by 90 ft. in area; OCCUPIED as an apartment hotel; the MEANS OF EGRESS consisting of two interior stairways extending from pent house to a corridor at 2nd story, with stairway to open foyer at 1st story, a fire escape in the south elevation with landing to yard and a fire escape in court on 57th street front, the building being equipped with a fire alarm signal system; and

WHEREAS, appellant contends that the present fire alarm system was installed in 1919 and approved by the fire department.

Resolved, that the order of the fire commissioner be and it hereby is modified, and the appeal be and it hereby is granted on condition that the existing alarm system, approved by the fire department in 1919, shall be maintained in perfect working order; that the requirements of the rules as to the periodical tests shall be complied with in all respects; and granted only so long as existing use and conditions shall be maintained.

526-24-A.

APPELLANT—Thomas R. McTigue, for Haynes Automobile Co., lessee.

SUBJECT—Application for modification of resolution—appeal from order of fire commissioner.

PREMISES AFFECTED—615-621 West 56th street and 614-620 West 57th street, Manhattan.

APPEARANCES—

For Appellant: Cortlandt Palmer and Thos. Tighe.

ACTION OF BOARD—Appeal reopened; resolution modified on same conditions.

CONDITIONS—As specified in resolution.

THE VOTE TO REOPEN AND MODIFY RESOLUTION—

Affirmative: Chairman Walsh, Messrs.

Dowd, Gunnison, Holland, Connell and

Fire Chief Kenlon 6

Negative 0

Absent: Mr. Kennedy 1

THE RESOLUTION:

(526-24-A)

WHEREAS, Haynes Automobile Co., lessee, filed, April 11, 1924, an appeal, with the board of appeals, from an order of the fire commissioner, affecting premises 615-621 West 56th street and 614-620 West 57th street, Borough of Manhattan; and

WHEREAS, the order of the fire commissioner, dated November 17, 1923, reads:

"2. Install a standpipe system with risers 4 in. in diameter tested to withstand a pressure of 300 lbs. per square inch, extending from cellar to roof * * *.

"3. Install an approved oil separator, trap or other similar apparatus."

and

WHEREAS, the building is fireproof, two stories in height, with a frontage of 100 ft. on West 56th street and a frontage of 100 ft. on West 57th street, and a depth of 200 ft. (20,000 sq. ft. in area); OCCUPIED on the first story of the 56th street front as a public garage and the remainder of the building as a service station for Haynes automobiles; and

MINUTES

WHEREAS, appellant contends the physical location of the premises—low height and facing on two streets—is such that a standpipe would afford no material assistance in the extinguishment of fire and that owing to the proximity of the sewer outlet to the premises the oil separator is unnecessary; and

WHEREAS, this appeal was granted by the board at its meeting July 8, 1924, on certain conditions, and appellant requested a modification of these conditions as to the lessee of premises.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted*, as to Item 2, on *condition* that a portable fomite extinguisher on wheels shall be provided on 2nd story and that the 1st story shall be sub-divided approximately in half by a fireproof partition; and *granted*, as to Item 3, on *condition* that the drainage system of building shall be equipped with oil separator; and *granted* so long as the operation, use and occupancy of building are maintained by the present lessees or their assigns for the repair and alteration on their own property.

634-24-A.

APPELLANT—Emile Bauer, lessee.

SUBJECT—Application for extension of permit (re: appeal from order of fire commissioner).

PREMISES AFFECTED—9120 89th street, Woodhaven, Queens.

APPEARANCES—None.

ACTION OF BOARD—Chairman read request to extend permit; appeal reopened and permit extended on same conditions.

CONDITIONS—As specified in resolution.

THE VOTE TO REOPEN AND EXTEND PERMIT—

Affirmative: Chairman Walsh, Messrs. Dowd, Gunnison, Holland, Connell and Fire Chief Kenlon	6
Negative	0
Absent: Mr. Kennedy	1

THE RESOLUTION:

(634-24-A)

WHEREAS, Emile Bauer, lessee, filed, May 7, 1924, an appeal, with the board of appeals, from an order of the fire commissioner, affecting premises 9120 89th street, Woodhaven, Borough of Queens; and

WHEREAS, the order of the fire commissioner, No. 28237-LC, dated April 17, 1924, reads:

"With reference to your application for a permit to store fuel oil at the above location, I regret to inform you that I am without power to grant such a permit for the reason that the storage of fuel oil at the above location is not in accordance with the rules adopted by the Board of Standards and Appeals on Nov. 6, 1919, amended January 18, 1924.

"You are therefore ordered to remove all fuel oil from the storage tank and discontinue the further storage and use of fuel oil at the above location.";

and

WHEREAS, the building is frame, 2½ stories in height, 20 ft. by 40 ft. in area; OCCUPIED as a dwelling; and

WHEREAS, a fuel oil burning system has been installed consisting of a 55 gallon storage tank, piping and a Powerlight Burner; and

WHEREAS, appellant contends that the installation conforms with the fuel oil rules, excepting in that the burner is not an approved burner; and

WHEREAS, this appeal was granted by the board at its meeting February 3, 1925, and May 5, 1925, on certain conditions, and appellant requested an extension of the time limit.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted*, for a temporary period of ninety (90) days, at the

owner's risk, pending the action of the board of standards and appeals on the petition for approval of the Powerlight Burner.

618-24-A.

APPELLANT—Albert Hayden, owner.

SUBJECT—Application for reopening—appeal from order of fire commissioner.

PREMISES AFFECTED—518 83rd street, Brooklyn.

APPEARANCES—None.

ACTION OF BOARD—Appeal reopened and extension of permit granted on same conditions.

CONDITIONS—As specified in resolution.

THE VOTE TO REOPEN AND EXTEND PERMIT—

Affirmative: Chairman Walsh, Messrs. Dowd, Gunnison, Holland, Connell and Fire Chief Kenlon	6
Negative	0
Absent: Mr. Kennedy	1

THE RESOLUTION:

(618-24-A)

WHEREAS, A. Hayden, owner, filed, May 2, 1924, an appeal, with the board of appeals, from an order of the fire commissioner, affecting premises 517 83rd street, Brooklyn; and

WHEREAS, the order of the fire commissioner, No. 88135-LC, dated April 12, 1924, reads:

"With reference to your application for a permit to store fuel oil at the above location, I regret to inform you that I am without power to grant such a permit for the reason that the storage of fuel oil at the above location is not in accordance with the rules adopted by the Board of Standards and Appeals on Nov. 6, 1919, amended Jan. 18, 1924.

"You are therefore ordered to remove all fuel oil from the storage tank and discontinue the further storage and use of fuel oil at the above location.";

and

WHEREAS, the building is non-fireproof, two stories and basement in height, 20 ft. by 60 ft. in area; OCCUPIED as a dwelling; and

WHEREAS, appellant contends that the installation conforms with the fuel oil rules excepting in that the burner (a Powerlight Oilheat) is not an approved burner; and

WHEREAS, this appeal was granted by the board at its meetings, July 15, 1924, October 28, 1924, January 27, 1925, and April 28, 1925, for a temporary period of 90 days, and appellant requests an extension of the period.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted*, for a temporary period of ninety days, pending the action of the board of standards and appeals on petition for approval of burner, on *condition* that the installation complies with fuel oil rules of the board of standards and appeals in all other respects.

For Applicant: Arthur C. McCauley.

ACTION OF BOARD—Application granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Dowd, Gunnison, Holland, Connell and Fire Chief Kenlon 6
Negative 0
Absent: Mr. Kennedy 1

THE RESOLUTION:

(304-25-BZ)

WHEREAS, Jamaica Water Supply Company, Warren Leslie, president, owner, filed, March 19, 1925, an application, under the building zone resolution, to permit in a residence district the erection and maintenance of a business building to be used as a water pumping station; premises west side of 143rd street, 100 ft. south of 111th avenue, Jamaica, Borough of Queens; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its regular meeting, September 8, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that 143rd street is a residence district and 111th avenue is a business district; and

WHEREAS, the decision of the superintendent of buildings, rendered December 9, 1924, reads:

"1. The erection of a business building in a residence district is contrary to Sec. 3 of the Building Zone Resolution: Construction not examined.";

and

WHEREAS, the proposed building is to be of non-fireproof construction, one story in height, with a frontage of 26 ft. and a depth of 26 ft.; to be occupied as a water pumping station; and

WHEREAS, the proposed pumping station is a public necessity and under the provisions of section 7, subdivision D of the building zone resolution, the board is empowered to act.

Resolved, that the board of appeals does hereby make a variation in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is granted on condition that the building shall not exceed a height of one story and restricted in area to the dimensions as indicated on plans filed in application, namely, 26 ft. by 26 ft.; that said building shall be used and maintained in conjunction with the existing local water supply system; that the operation of this pump house shall be restricted to electrical motive power; that the finished working drawings of the exterior design shall be returned to this board for approval; that all necessary permits shall be obtained within six months and the building completed within nine months.

305-25-BZ.

APPLICANT—Jamaica Water Supply Co., owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a residence district the erection and maintenance of a business building to be used as a water pumping station.

PREMISES AFFECTED—West side of 224th street, 250 ft. north of Foch boulevard (Central avenue), Jamaica, Borough of Queens.

APPEARANCES—

For Applicant: Arthur C. McCauley.

ACTION OF BOARD—Application granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Dowd, Gunnison, Holland, Connell and Fire Chief Kenlon 6
Negative 0
Absent: Mr. Kennedy 1

THE RESOLUTION:

(305-25-BZ)

WHEREAS, Jamaica Water Supply Co., Warren Leslie, president, owner, filed, March 19, 1925, an application, under the building zone resolution, to permit in a residence district the erection and maintenance of a business building to be used as a water pumping station; premises west side of 224th street, 250 ft. north of Foch boulevard (Central avenue), Jamaica, Borough of Queens; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its regular meeting, September 8, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that 224th street is a residence district and Foch boulevard (Central avenue) is a business district; and

WHEREAS, the decision of the superintendent of buildings, rendered December 9, 1924, in acting on N. B. App. No. 19233-24, reads:

"1. The erection of a business building in a residence district is contrary to Section 3 of the Building Zone Resolution. Construction not examined.";

and

WHEREAS, the proposed building is to be of non-fireproof construction, one story in height with a frontage of 26 ft. and a depth of 26 ft.; to be occupied as a water pumping station; and

MINUTES

WHEREAS, the proposed pumping station is a public necessity and under the provisions of section 7, subdivision of the building zone resolution, the board is empowered to act.

Resolved, that the board of appeals does hereby make a variation in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is granted on condition that the building erected shall not exceed a height of one story and restricted in area to the dimensions as indicated on plans filed in application, namely, 26 ft. by 26 ft.; that said building shall be used and maintained in conjunction with the existing local water supply system; that the operation of this pump house shall be restricted to electrical motive power; that the finished working drawings of the exterior design shall be returned to this board for approval; that all necessary permits shall be obtained within six months and the building completed within nine months.

77-25-BZ.

APPLICANT—Bandler, Haase & Collins, for 212 West 72nd Street Corp., owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a residence and "B" area district extending from a business district, the alteration and extension of a building to be used in part for business purposes, also the omission of a rear yard as required by the building zone resolution.

PREMISES AFFECTED—212 West 72nd street, Manhattan.

APPEARANCES—

For Applicant: John F. Collins, Samuel Rosenblum.

For Opposition: Stephen W. Collins.

ACTION OF BOARD—Application granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Dowd, Gunnison, Holland, Connell and Fire Chief Kenlon	6
Negative	0
Absent: Mr. Kennedy	1

THE RESOLUTION:

(577-25-BZ)

WHEREAS, Bandler, Haase & Collins, for 212 West 72nd Street Corp., owner, filed, June 4, 1925, an application, under the building zone resolution, to permit in a residence district and "B" area district, extending from a business district, the alteration and extension of a building to be used in part for business purposes, also the omission of a rear yard as required by the building zone resolution; premises 212 West 72nd street, Manhattan; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its regular meeting, September 8, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that 72nd street and 71st street are residence use and "B" area districts and Broadway is a business use and "B" area district; and

WHEREAS, the decision of the superintendent of buildings, rendered May 22, 1925, in acting on Alt. App. No. 1042-25, reads:

"2. In a residence district a building devoted to a use not permitted in such district may not be extended. Section 6 of the Building Zone Resolution.

"3. Provide rear yard as required by Section 16-b of the Building Zone Resolution for residence districts.";

and

WHEREAS, the existing building is of non-fireproof construction, five stories in height, with a frontage of 25 ft. and a depth of 65 ft. and 81 ft. (irregular); occupied store and dwelling; it is proposed to erect a one-story rear extension 25 ft. by 37 ft. 2 in. covering the entire yard, to be used as a real estate office; and

WHEREAS, it appears that the difference in grade between 71st street and 72nd street brings the roof of the proposed extension, approximately 5 ft. above the yard level of 71st street property and there are adjoining business uses to the east.

Resolved, that the board of appeals does hereby make a variation in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is granted on condition that the proposed extension shall be restricted in height to a one-story structure, approximately 9 ft. 1 in. above curb level of 72nd street frontage, and in depth 21 ft. 2 in. at the easterly gable and 37 ft. 2 in. at the westerly gable; that the rear and gable walls shall be unpierced throughout their entire height and length; that the use and occupancy shall be limited and restricted to executive offices in conjunction with the existing real estate business now conducted on the premises; and that all necessary permits shall be obtained within 90 days and the work completed within six months from date of this action.

737-25-BZ.

APPLICANT—Frank S. Parker, for 598 Eighth Avenue Corporation, lessee.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a 1½ times height district the erection and maintenance of the street walls to a height exceeding the limit required by the building zone resolution.

PREMISES AFFECTED—594-598 Eighth avenue and 270-274 West 39th street, Manhattan.

APPEARANCES—

For Applicant: Frank S. Parker, Mack Kannar.

For Opposition: None.

ACTION OF BOARD—Application granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Dowd, Gunnison, Holland, Connell and Fire Chief Kenlon	6
Negative	0
Absent: Mr. Kennedy	1

THE RESOLUTION:

(737-25-BZ)

WHEREAS, Frank S. Parker, for 598 Eighth Avenue Corp., owner, filed, July 14, 1925, an application, under the building zone resolution, to permit in a 1½ times height district the erection and maintenance of the street walls of a proposed building to a height exceeding the limit imposed by the building zone resolution; premises 594-598 Eighth avenue and 270-274 West 39th street, Manhattan; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its regular meeting, September 8, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the district maps accompanying the building zone resolution show that Eighth avenue, east side, is a business use and 1½ times height district and Eighth avenue, west side, is a business use and 2 times height district; and

WHEREAS, the decision of the superintendent of buildings, rendered July 11, 1925, in acting on N. B. App. No. 424-25, reads:

"1. Height on the building line should not exceed 150 feet. Building Zone Resolution, Section 8d.";

and

WHEREAS, the proposed building is to be of fireproof construction, 20 stories in height, with a frontage of 100 ft. and a depth of 39 ft. 9 in. and 98 ft. 9 in. (irregular); to be occupied as stores, showrooms and manufacturing; it is proposed to erect the street wall to a height of 200 ft. without a setback instead of 150 ft.; and

WHEREAS, the board deemed, in view of the fact that applicant's property is encompassed by 2 times height privi-

MINUTES

lege which he seeks, it would be a hardship to deny a similar privilege to the property under appeal.

Resolved, that the board of appeals does hereby make a variation in the application of the height district regulations of the building zone resolution, and that the application be and it hereby is granted on condition, and only so far as it affects the street wall on the avenue frontage and for a depth of 100 ft. on the side streets; that the street wall shall not exceed a height of 200 ft. without a setback; that the requirements of the building zone resolution shall be complied with in all other respects; that all permits necessary for the prosecution of the work shall be obtained within sixty days and the construction of the building prosecuted to completion without suspension or delay.

331-25-BZ.

APPLICANT—R. Thomas Short, for Michael Noonan, owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit partly in a business district and partly in a residence district the alteration and extension of an existing garage for the storage of more than five (5) motor vehicles.

PREMISES AFFECTED — 187A-201 Garfield place, Brooklyn.

APPEARANCES—

For Applicant: John Glynn, Alfred E. Smith, Jr.

For Opposition: Walter Bruchhausen.

ACTION OF BOARD—Application granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Dowd, Gunnison, Holland, Connell and Fire Chief

Kenlon 6

Negative 0

Absent: Mr. Kennedy 1

THE RESOLUTION:

(331-25-BZ)

WHEREAS, R. Thomas Short, for Michael Noonan, owner, filed, March 26, 1925, an application, under the building zone resolution, to permit partly in a residence district and partly in a business district the alteration and extension of an existing garage for the storage of more than five motor vehicles; premises 187A-201 Garfield place, Brooklyn; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its regular meeting, September 8, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Garfield place is a residence district and Seventh avenue is a business district; and

WHEREAS, the decision of the superintendent of buildings, rendered May 25, 1925, in acting on Alt. App. No. 9042-25, reads:

"Proposition contrary to the Zone Resolution, Art. II, Sec. 3 & Sec. 4.

"The extension of a public garage for more than five motor vehicles partly in a business district and partly in a residence district;"

and

WHEREAS, there exists on the premises a one and two-story—partly brick and partly wood—public garage. It is proposed to remove part of the existing brick and all of the wooden walls, covering the entire rear lot with a one-story garage, the existing 2nd story to remain but to be used only as an office; the proposed garage will be 170 ft. by 50 ft. in area, being reached by two driveways from Garfield place; and

WHEREAS, the board deemed that applicant has established his basis of appeal under section 21 of the building zone resolution and that the proposed alteration, namely, the fireproofing of the existing authorized garage use and occupancy would be a material and substantial protection to the adjoining properties.

Resolved, that the board of appeals does hereby make a variation in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is granted on condition that the garage use and occupancy shall be restricted in height to a one-story structure; that the proposed 2nd story shall not exceed the area and dimensions indicated on plans filed in this application; and that the use and occupancy of the second story shall be restricted to office occupancy and use incidental to the conduct of a garage, and shall not be used for the live storage of automobiles; the runways from Garfield place if enclosed shall be roofed over with fireproof construction and ventilated by not less than two skylights on the length of the runway, the skylights to be glazed with plain glass equipped with wire guards above and below; that there shall be no additional openings in addition to those now in existence in the rear and gable walls of the present structure; that the gasoline storage shall not exceed in quantity the amount allowed by permit now in force on the premises; that all permits necessary for the prosecution of the work shall be obtained within nine months and the work completed within eighteen months from the date of this action.

610-25-BZ.

APPLICANT—John E. Joyce, owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit the conversion from a residence to a business use (stores) of the first story of a building located partly in a residence and partly in a business use district.

PREMISES AFFECTED—201 East 198th street, The Bronx.

APPEARANCES—

For Applicant: John E. Joyce.

For Opposition: None.

ACTION OF BOARD—Application granted on condition.

CONDITIONS—As specified in resolution.

Affirmative: Chairman Walsh, Messrs. Dowd, Gunnison, Holland, Connell and Fire Chief

Kenlon 6

Negative 0

Absent: Mr. Kennedy 1

THE RESOLUTION:

(610-25-BZ)

WHEREAS, John Joyce, owner, filed, June 12, 1925, an application, under the building zone resolution, to permit the conversion, from a residence use to a business use (stores) of the first story of a building, located partly in a residence and partly in a business use district; premises 201 East 198th street, The Bronx; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its regular meeting, September 8, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Grand Concourse is a residence district and East 198th street is a business district; and

WHEREAS, the decision of the superintendent of buildings, rendered June 11, 1925, in acting on Alt. App. No. 313-25, reads:

"Disapproved with the following objections, viz.: Alteration and conversion of dwelling partly in business district and partly in residence district, to be occupied for business purposes, is contrary to provisions of Building Zone Resolution."

and

WHEREAS, it is proposed to alter the existing building occupied as a dwelling by erecting a one-story extension at the front, approximately 17 ft. by 31 ft., to be used as a store; the building extends 11 ft. in the residence district and 6 ft. in the business district; and

MINUTES

WHEREAS, the board deemed that applicant established his
sis of appeal under sections 7-b and 7-c of the building
ne resolution and that it would be a hardship not to per-
t the proposed business use on the first story of the
ucture; the lot being cut by two use districts and in
ew of the existing business use in the street frontage.
Resolved, that the board of appeals does hereby *make a*
riation in the application of the use district regulations
the building zone resolution, and that the application be
d it hereby is *granted on condition* that the business use

shall be limited to the first story of the premises, and the
nature of the business shall be restricted to retail mer-
cantile shops or stores not conducted or operated on Sun-
days or holidays; that all permits necessary for the prose-
cution of the work shall be obtained within one month
and the building completed within six months from the date
of this action.

Gunnison, Holland, Connell and Fire Chief
Kenlon 6
Negative 0
Absent: Mr. Kennedy 1

THE RESOLUTION:

(186-25-A)

WHEREAS, Albert E. Kleinert, superintendent of buildings,
Borough of Brooklyn, filed, February 16, 1925, an appeal,
with the board of appeals, for revocation of the Certificate
of Occupancy No. 4188-23 issued for premises 4409 New
street, Brooklyn; and

WHEREAS, it appears that an application was filed in the
bureau of buildings to permit in a business district the erec-
tion of a three (3) story brick building with a frontage
of 25 ft. 2½ in. and a depth of 122 ft. in the first story,
to be occupied as store on the first story and dwelling
above; and

WHEREAS, it appears that there is a portion of this lot
which is in the residence district and which was shown
originally as belonging to the premises No. 1109 45th street
has been built upon and is occupied for business purposes,
the extension having been originally shown as 60 ft. in
depth, but having been erected 75 ft. in depth.

Resolved, that the board of appeals does hereby *grant*
appeal, revoking Certificate of Occupancy No. 4188-1923,
without prejudice to the owner in fee of present date, af-
fecting any application to be made to this board for a
variation of the zoning resolution.

656-25-A.

APPELLANT—Albert E. Kleinert, superintendent of build-
ings, Borough of Brooklyn.

SUBJECT—Revocation of Certificate of Occupancy No.
24654/24 issued to

PREMISES AFFECTED—1109 45th street, Brooklyn.

THE RESOLUTION:

(656-25-A)

WHEREAS, Albert E. Kleinert, superintendent of buildings,
Borough of Brooklyn, filed, April 27, 1925, an appeal,
with the board of appeals, for revocation of the Certificate
of Occupancy 24654/24 issued for premises 1109 45th
street, Brooklyn; and

WHEREAS, it appears that an application was filed in the
bureau of buildings to permit a lot located partly in a busi-

MINUTES

ness and partly in a residence district the erection of a two-story brick business structure 20 ft. 7 in. front and rear, 60 ft. 2 1/8 in. in depth, with a one-story brick extension at the rear 20 ft. 7 in. by 40 ft. irregular in depth, an offset 6 ft. 5 in. by 20 ft. at rear of lot shown as being part thereof but actually being a part of adjoining property; no rear yard was provided and the business use extends into the residence district; and

WHEREAS, the superintendent of buildings contends that the permit was issued in error by an examiner temporarily appointed and that the same architect filed the application for a permit on both these premises and premises also under appeal (Cal. No. 186-25-A) for revocation of certificate of occupancy.

Resolved, that the board of appeals does hereby *grant* appeal, revoking Certificate of Occupancy No. 24654-24, without prejudice to the owner in fee of present date, affecting any application to be made to this board for a variation of the zoning resolution.

THE RESOLUTION:

(327-25-BZ)

WHEREAS, Richard Shutkind, for Richard Schmidt, owner, filed, March 26, 1925, an application, under the building zone resolution, to permit in a business district the erection and maintenance of an extension to a dry cleaning establishment; premises 162-166 Prospect street, Borough of Queens; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its special meeting, September 8, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Prospect street and Paynter avenue are business districts and Wilbur avenue is an unrestricted district; and

WHEREAS, the decision of the superintendent of buildings, rendered March 9, 1925, in acting on Alt. App. No. 496-25, reads:

"Extension of dry cleaning establishment in business district is prohibited by the zone law.";

and

WHEREAS, the existing building is of non-fireproof construction, two stories in height, with a frontage of 51 ft. and a depth of 20 ft.; occupied as a dry cleaning establishment; it is proposed to erect a one-story fireproof extension 24 ft. 8 in. by 42 ft. in area, to be used as a benzine washroom; and

WHEREAS, the property affected is located in a business district and was in the possession of the present owner and part of plot used in the conduct of the business on same premises before the enactment of the zoning resolution.

Resolved, that the board of appeals does hereby *make a variation* in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is *granted on condition* that the extension shall be limited in height to a one-story structure and limited in area to a building 24 ft. 8 in. by 36 ft. 4 in. deep, with a motor room extension not exceeding 5 ft. 8 in. in depth; that the northerly gable and rear walls abutting the adjoining properties shall be erected and maintained unpierced throughout their entire height and length; that there shall be not less than two (2) skylights installed in the room, glazed with plain glass, protected with wire guards above and below, and that there shall be no benzine storage maintained within the proposed one-story rear extension; that the roof shall be constructed of reinforced concrete; and

Resolved, further, all permits necessary for the prosecution of the work shall be obtained within six (6) months and the building completed within one (1) year from the date of this action.

1429-24-BZ.

APPLICANT—John De Hart, for John J. Daly and Max L. Fried, owners.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a business district the maintenance of a motor vehicle repair shop.

PREMISES AFFECTED—1012-1018 Avenue St. John, The Bronx.

APPEARANCES—

MINUTES

THE RESOLUTION:

(1429-24-BZ)

WHEREAS, John De Hart, for John J. Daly and Max L. ried, owners, filed, December 3, 1924, an application, under the building zone resolution, to permit in a business district the maintenance of a motor vehicle repair shop; premises 1012-18 Avenue St. John, The Bronx; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its special meeting, September 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Avenue St. John and Southern boulevard are business districts and Fox street is a residence district; and

WHEREAS, the decision of the superintendent of buildings, rendered December 8, 1924, in acting on Slip App. No. 166-4, reads:

"Your application for a certificate of occupancy for the rear portion of the building 1012-18 Avenue St. John, Borough of The Bronx, as a five-car garage and repair shop for motor vehicles, is hereby denied as the premises are located in a business district in which such occupancy is prohibited by the provisions of the Building Zone Resolution."

nd

struction, one story in height, with a frontage of 75 ft. and a depth of 100 ft.; to be occupied as a five-car garage, motor vehicle repair shop, dead storage garage and stores, the repairing to consist of the placing of a signal attachment on the rear of car; and

WHEREAS, the board deemed there is no marked prohibitive nuisance as intended by restrictions of zoning resolution connected with the conduct of the work.

Resolved, that the board of appeals does hereby *make a variation* in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is *granted*, with the specific provision that a general motor vehicle repair work shop shall not be conducted on the premises and that the operation and conduct of the shop shall be restricted to the placing and installation of signal lights on automobiles; that all work and operation thereof shall be by manual operation and no motor power machinery other than a 1/2 H. P. portable drill permitted on the premises, and that the allowable automobile storage shall be limited to five (5) automobiles throughout the entire premises and that there shall be no gasoline storage equipment installed or maintained on the premises. All permits required to be obtained within 60 days and work completed within 90 days.

RULES

SMOKING IN FACTORIES.

Adopted by the Board of Standards and Appeals,
August 13, 1918.

RULE 1. PERMIT.

(a) **Prohibition.** No person shall smoke, or carry a lighted cigar or cigarette in any factory as defined in article 1, Section 2, of the State Labor Law, nor in any portion of a factory, within the City of New York, except in such protected portions or special classes of occupancies as are specified in Rule 2 of these rules, and then only after the issuance of a permit by the fire commissioner.

It shall be the joint and several duty of the owner and of the lessee or lessees of the building containing such factory or factories to cause to be posted in each and every entrance hall, stairhall or room throughout the building, as well as in every elevator-car, in English, and also in such other language or languages as the fire commissioner shall direct, a notice of such prohibition, and the penalty for its violation.

(b) **Application.** Application for such permit shall be made only by the owner of the building on suitable blank forms to be furnished by the fire commissioner.

(c) **Time Limit.** Such permit shall be for a definite period, not exceeding one year, and shall not be renewed upon expiration until a reinspection of the premises for which it is issued has been made for the purpose of determining whether existing conditions warrant a renewal.

(d) **Conditions.** The permit shall state the conditions under which, the hours between which, and the place or places in such factory where smoking may be permitted, and this permit shall be framed and kept posted in a conspicuous place in the factory.

(e) **Revocation.** Violation of any of the conditions specified in the permit, in addition to incurring such penalties as are prescribed by law, shall be full and sufficient cause for the revocation of such permit by the fire commissioner, and he shall not again issue a permit for the same premises until at least one year has elapsed.

RULE 2. PERMISSIBLE CASES.

Smoking may be permitted in:—

(a) Factories engaged in the manufacture of cigars, cigarettes, or smoking tobacco, when necessary for the efficient conduct of the business, provided that:

(1) No smoking other than that for sampling, testing and experimental purposes is carried on.

(2) Such smoking is conducted in a room provided especially for that purpose, separated from the rest of the building by fireproof or fire-resisting partitions, with all openings therein protected by self-closing fire doors, and, further, unless the building is of fireproof construction or equipped with an approved automatic sprinkler system, the floor and ceiling of such room shall be covered with fire-retarding material.

(3) Such chemical fire extinguishers as the fire commissioner may direct are installed.

(4) All waste paper and other inflammable waste materials are deposited in fireproof receptacles.

(b) Factories devoted entirely to one of the following occupancies:

Blacksmithing or horseshoeing;
Boiler making;
Brick, terra cotta or artificial stone works;
Forge shops;
Foundries;
Iron, steel, brass or copper works;
Machine shops;
Smelting;
Stone or monumental works;

provided that in any case:

(1) The building is not of wooden construction;

(2) Such chemical fire extinguishers as the fire commissioner may direct are installed;

(3) All waste paper and other inflammable waste materials are deposited in fireproof receptacles.

PUBLIC HEARING

PROPOSED AMENDMENTS TO RULES GOVERNING FIRE EXTINGUISHING APPLIANCES— SPRINKLER SYSTEMS.

[77-25-SR]

NOTICE IS HEREBY GIVEN that a public hearing will be held by the Board of Standards and Appeals on Friday, September 25, at 2 p. m., Room 1013, Municipal Building, on proposed amendments to Rules for Fire Extinguishing Appliances, Sprinkler Rules.

General Requirements. The rules contained herein cover the general details of a sprinkler equipment only. Before an equipment is installed or before a present equipment is remodeled, complete working plans should be submitted for approval to Fire Department.

These plans shall be drawn to an indicated scale; give correct address and points of compass; show sectional elevations of the building; and the essential features of the construction, viz., size, location and direction of joists, timbers or other structural members. They shall also indicate the location and size of water supplies, connecting pipes, feed mains and risers, gate, check, alarm and dry-pipe valves, as well as the location, spacing, number and type of sprinklers.

Upon approval of preliminary plans such number of sets of clean, corrected plans on cloth as the Fire Commissioner may require, not exceeding three (3), shall be filed for final approval of the Fire Commissioner. A certified copy of the approved plans shall be forwarded to the Bureau of Buildings by the Bureau of Fire Prevention. Such application and specification forms as may be prescribed by the Fire Commissioner shall accompany preliminary plans. If a standpipe (fire line) equipment is provided throughout the building, the plans shall include a note to that effect.

When entirely completed in accordance with the approved plans and as per test herein provided for, application shall be made to the Bureau of Fire Prevention for inspection of the completed installation. When the sprinkler equipment is approved the applicant will be so advised in writing by the Bureau of Fire Prevention.

All sprinkler equipments shall be installed in a thoroughly workmanlike manner.

Rule 1. Definition of Automatic Extinguisher Systems. Automatic extinguisher systems shall consist of a system of piping connected to one or more acceptable sources of water supply, or other extinguishing medium, provided with distributing devices so arranged and located as to discharge and diffuse automatically under the action of heat an effective stream or spray over every part of the interior of the building area in which a fire may start or to which it may be communicated.

Rule 2. Classification of Sprinkler Systems. For the purpose of these rules, sprinkler systems shall be classified as:

(a) Automatic Wet Pipe Systems, in which all pipes and sprinkler heads are at all times filled with water;

(b) Automatic Dry Pipe Systems, in which the pipes and sprinkler heads are filled with air, either compressed or at atmospheric pressure, and the water supply is operated by a Dry Pipe Valve as defined in Rule 27 of these Rules.

(c) Non-Automatic Systems, in which all pipes and sprinkler heads are maintained dry with a fire department connection for water supply.

Thermostatic fire alarm with direct connection to Central Office or Fire Department Headquarters shall be provided in connection with all non-automatic sprinkler systems.

Rules 3. Approved Devices. Automatic Sprinklers and accessory appliances shall include all devices approved as such by the Bureau of Standards, Washington, D. C.; by the Underwriters' Laboratories, Inc., of Chicago; by the Associated Factory Mutual Laboratories of Boston; and all devices which meet the tests prescribed by the Board of Standards and Appeals.

Rule 4. Water Supply. Approved sources of water supply shall be classified as Automatic and Auxiliary.

(a) Automatic Sources shall include the Gravity Tank, the Pressure Tank, [and] the Public Water System, and the Automatic Electric Fire Pump, installed as required under the provisions of Rule 8, hereinafter provided for.

b) Auxiliary Sources shall include the non-automatic Fire Pump and the Fire Department Connection.

Rule 5. Gravity Tank. Gravity tanks shall contain an available quantity of water sufficient to supply twenty-five per cent. (25%) of the number of sprinkler heads in the average protected fire area for twenty (20) minutes, but not less than 5,000 gallons; and the bottom of the tank shall have an elevation of not less than twenty (20) feet above the highest line of sprinklers below the main roof. When the area of a pent house exceeds 2,500 sq. ft. the bottom of the tank shall be required to be not less than 20 feet above the highest line of sprinklers below the pent house roof, but where a pent house contains only pressure tanks this rule will not apply.

Where a tank capacity in excess of [25,000] 30,000 gallons is required by this rule, the amount of water to be provided in excess of [25,000] 30,000 gallons shall be specified by the Board of Standards and Appeals, except when tanks of unlimited capacities are supported on structures altogether independent of buildings.

The tank shall be filled through a fixed pipe, independent of the sprinkler piping, not less than two (2) inches in size, discharging into the top of the tank, or through a by-pass not less than two (2) inches in size around the check valve in the discharge pipe, provided the supply is of sufficient pressure to fill the tank. The water supply and connections shall be capable of supplying the tank at a rate of not less than sixty-five (65) gallons per minute.

The filling pipe shall be carried up inside a frost-proof casing and may extend through tank bottom to discharge at top of tank above full water level. The portion of pipe inside tank must be of brass or copper or other non-corrosive material.

Tanks shall not be fed through sprinkler lines.

The sprinkler and standpipe tanks may be fed from a common source of supply, either a pump or a direct service main connection, provided that there are separate feed mains from the basement or lowest story and a control valve in each feed line in a pump or engine room.

The overflow pipe shall be not less than two (2) inches in diameter for tanks up to 30,000 gallons capacity and not less than three (3) inches in diameter for larger tanks. The top of the overflow pipe shall be three (3) inches below the top of the staves in wooden tanks and one (1) inch from the top in steel tanks. The pipe may extend through the bottom of tank provided the portion inside tank is of brass or copper or other non-corrosive metal and without joints or it may extend through side of tank. For tanks over roofs overflow pipes shall terminate not more than twenty-four (24) inches above roof and shall be fitted with a 90 degree elbow.

The discharge, heating or filling pipes where exposed to the weather shall be protected from freezing by a frost-proof covering which may be of three layers of one-inch (1") hair felt interspersed with building paper well wrapped and secured and covered with canvas well painted or by frost-proof boxing as specified by the National Board of Fire Underwriters.

Easy access to top of each tank shall be provided by means of a steel gooseneck ladder substantially constructed and rigidly braced, the top of which shall not tip outward from the vertical at any point.

Tanks above roofs shall be constructed according to the requirements of the Building Code and supporting struc-

PUBLIC HEARING

tures shall be approved by the Superintendent of Buildings. Tanks not enclosed and exposed to the weather shall be covered with a double roof of acceptable construction consisting of a tight flat cover of matched boards and above this a conical roof which shall be covered with an approved roofing.

Where a gravity tank may supply both sprinklers and yard hydrants it shall not be of less than 30,000 gallons capacity and located on a structure altogether independent of buildings and the bottom shall not be less than 75 feet above the ground level, and not less than 20 feet above the highest line of sprinklers below the main roof of the highest building in a group of buildings.

Rule 6. Pressure Tank. Pressure tanks shall contain sufficient water to supply twelve and one-half per cent (12½%) of the number of sprinklers in the average protected fire area for twenty (20) minutes, but not less than [5,000] 3,000 gallons of water for a wet pipe system where supplemented by an auxiliary water supply, and not less than 5,000 gallons of water for a dry-pipe system. No single tank shall have a capacity greater than 9,000 gallons. The tank shall be kept two-thirds (2/3) full of water under a pressure of seventy-five (75) pounds per square inch, and shall be so proportioned and located that a pressure of not less than fifteen (15) pounds per square inch will be available on the highest line of sprinklers below the main roof when all the water has been discharged from the tank.

[The tank shall be placed either on the roof or in the highest sprinklered story.]

A pressure tank or tanks shall not be located below the highest line of sprinklers supplied by tank or tanks.

Where [a tank] the total capacity of the pressure tank supply is in excess of [25,000] 30,000 gallons as required by this rule, the amount of water to be provided in excess of [25,000] 30,000 gallons shall be specified by the Board of Standards and Appeals.

The water shall be supplied through a fixed pipe, independent of the sprinkler piping, not less than [two] one and one-half (1½) inches in size [with a one and one-quarter (1¼) inch connection to the tank], or through a by-pass not less than [two (2)] one and one-half (1½) inches in size around the check valve in the discharge pipe provided the supply is of sufficient pressure to fill the tank. The water supply and connections shall be capable of supplying the tank at a rate of not less than sixty-five (65) gallons per minute without reducing the pressure in the tank. The tank shall have a fixed metallic horizontal line on the end opposite the glass gauge, or other acceptable device, to indicate the level of the water when the tank is two-thirds full.

The air compressor shall be of sufficient capacity to increase the air pressure at the average rate of one (1) pound in two minutes in each pressure tank.

Rule 7. Public Water System. Direct connection to the city water supply shall be capable of furnishing water at not less than fifteen (15) pounds per square inch static pressure at the highest line of sprinklers under the main roof.

Subject to the requirements of the Department of Water Supply, Gas and Electricity, the size of each connection shall be as large as that of the main riser and not less than four (4) inches, and shall have a conveniently accessible control valve fixed to it at, or near, the curb, or, when possible, still further away from the building. The control valve shall be fitted with a frost and waterproof box, not less than four (4) feet nor more than six (6) feet below the curb, with a fixed stem extending to a compartment at the level of the sidewalk. The cover shall be bolted to the casing and shall be so marked as to be quickly located and to indicate the purpose of the valve. The valve shall be of indicating pattern, operated by a special socket wrench approved by the department of water supply, gas and electricity.

Where it is impractical to install a control valve box at the curb because of a vault under the sidewalk and within 18" thereof, the control valve may be located in the water supply connection at a point not more than two (2) feet from the point of entry into a vault.

Where a water meter is required in the water supply connection to an automatic sprinkler equipment, it shall be of a type which allows free flow of water and approved by the Department of Water Supply, Gas and Electricity, or a type of fire line meter which has been specifically approved by the Fire Commissioner for use in connection with fire extinguishing equipment.

Evidence establishing the fact that water supply conditions and pressures are as may be required shall be submitted to the Fire Department.

Rule 8. Fire Pump. An automatic electric fire pump as an automatic source of water supply is one approved for such use and controlled by an approved automatic controlling device, which shall be adjusted to maintain not less than 15 pounds water pressure at the highest sprinkler below main roof and in pent houses over 2,500 sq. ft., as provided in Rule 5. And shall receive water supply only from a direct connection to the city water main.

As auxiliary sources of water supply steam or electric standard fire pumps shall receive water supply from a suction tank, a direct connection to the city water main or other approved sources capable of supplying the pump at its rated capacity for sixty (60) minutes. The rated capacity of the pump shall be not less than five hundred (500) gallons per minute, and shall be sufficient to supply twenty-five per cent (25%) of the number of sprinklers in the average protected fire area.

The pump shall be located in a room of fireproof construction, properly ventilated, lighted and drained, enclosed in eight (8) inch brick or concrete walls with approved fire doors at openings and with fireproof floor and ceiling construction. If located in the lowest story of the building, the pump shall be placed on a foundation not less than one (1) foot in height. The pump room shall be readily accessible with safe egress for the attendant.

A reliable source of energy for driving the pump shall be provided. For steam pumps, provision shall be made for sufficient steam power to operate the pumps at full rated capacity, and a steam pressure of not less than fifty (50) pounds shall be maintained at the pump at all times. Where there is more than one boiler, the pipes and valves shall be so arranged to permit the cutting out of any one boiler without interrupting the steam supply to the pump from the other boilers. The boiler room shall be cut off from the remainder of the building by fireproof floor and wall construction with approved fire doors at all openings.

Electrical energy from a public service plant shall be acceptable as a source of energy for driving electric fire pumps. When local power plants supply the energy for operating electric pumps, two motor generator units shall be provided, or one generator unit supplemented by a public service break-down switch. Local electric power plants shall be located in rooms of fireproof construction with approved fire doors at openings.

Rule 9. Sprinkler Discharge. For the purpose of computing the capacity of water supplies, standard one-half (½) inch sprinkler heads shall be assumed to have an average discharge of twenty (20) gallons per minute, and the discharge of larger heads shall be computed proportionately in the ratio of the areas of their respective orifices.

Rule 10. Fire Area. A fire area is any floor space enclosed on all sides by exterior walls or fire walls or a combination of both. The number of sprinklers in the average protected fire area shall be determined by the number of sprinklered stories in such section. In

PUBLIC HEARING

determining the required capacity of water supplies, the number of sprinklers in the average protected fire area need not include those located in low positions, such as under benches, low shelves, closets and platforms and between cars in car barns.

Rule 11. Fire Department Connection. All automatic sprinkler systems shall be provided with at least one two-way Siamese connection on each street front of the building for connection to the fire department hose. Buildings fronting on only one street shall be provided with at least two Siamese connections when the street frontage of building exceeds [one hundred and fifty (150)] two hundred (200) feet [in width].

Where buildings have frontages on more than one street there shall be a fire department connection on each street front where frontage is not continuous but in all cases where more than one fire department connection is required they shall be located as the Fire Commissioner may direct and shall not be grouped.

All Siamese hose connections hereafter installed, except those on piers or warehouses intended for fire boat use, shall be three (3) inches in size. Fire boat connections shall be three and one-half ($3\frac{1}{2}$) inches in size. All hose connections shall be female, with standard fire department threads.

The inlets shall be placed at least eighteen (18) inches and not more than two (2) feet above the sidewalk, in a horizontal position accessible to the fire department, and shall be provided with a four (4) inch discharge connecting with a four (4) inch pipe to the sprinkler system for three (3) inch fire department connection and with a six (6) inch discharge outlet and six (6) inch pipe for three and one-half ($3\frac{1}{2}$) inch fire boat connection. Each inlet shall be provided with a clapper valve machined to a true face.

Each Siamese connection shall be designated by raised letters at least one (1) inch in size, cast in the fitting in a clear and prominent manner and reading for the service designated, viz.: "Base. Spkr.," etc., as the case may be. If the entire building is sprinklered, the fitting shall be marked "Auto. Spkr."

Siamese hose connections may project through a street wall not more than twelve (12) inches beyond the building line except that where there is an angle formed by the street wall and a check piece or the base of a column, pilaster or ornamental projection, they may be so located that no part extends more than fifteen (15) inches from either side of such angle in accordance with the provisions of the Building Code.

In each fire department connection there shall be an approved straightway check valve installed in a horizontal position, unless suitably designed for vertical position, and the piping shall be arranged to drain between the check valve and the outside siamese coupling by either a ball drip having a one-half ($\frac{1}{2}$) inch pipe connection and one-half ($\frac{1}{2}$) inch orifice and a bronze ball of proper size, or by a three-quarter ($\frac{3}{4}$) inch drip connection, with plugged valve attached, and when necessary arranged to drain to a sewer. A drain connection may be tapped into the body of check valve only when located in a horizontal position.

Rule 12. Automatic Sprinkler Systems. Automatic sprinkler systems shall be classified as:

(a) One Source Systems, supplied with water from any one of the automatic sources; and

(b) Two Source Systems, supplied with water from a combination of any two of the automatic sources; two pressure tanks with a total water capacity twice that required for a one source supply; direct connection to the city water supply on two different streets, so located that the closing of the controlling valve on one main will not eliminate the main on the other street; or a direct connection to the city water supply and one of the auxiliary sources provided the water supply main is at least six (6) inches in size, the main is fed both

ways and a two (2) inch test pipe at the top of the sprinkler riser shows a flowing pressure of fifteen (15) pounds per square inch between the hours of six a. m. to six p. m.

A gravity tank and pressure tank, or a gravity tank or pressure tank and one of the automatic sources or two pressure tanks having a total water capacity for a one-source supply may be considered as a two-source supply where the occupancy of the building does not conflict with Rules 38, 39 and 40 hereinafter provided for.

Rule 13. Sprinkler Spacing. Sprinkler heads and lines shall be spaced as herein provided:

Mill Construction. Under mill ceiling (smooth solid plank and timber construction, 5 to 12 foot bays) one line of sprinklers shall be placed in the center of each bay and the distance between the heads on each line shall not exceed the following:

- (a) For Standard one-half ($\frac{1}{2}$) inch heads—
 - 8 feet in 12 foot bays;
 - 9 feet in 11 foot bays;
 - 10 feet in 10 foot bays;
 - 11 feet in 9 foot bays;
 - 12 feet in 5 to 8 foot bays;

- (b) For Conran* one (1) inch heads—
 - 20 feet in 5 to 12 foot bays.

- (c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads—
 - 25 feet in 5 to 12 foot bays.

- (d) Vaults used for the storage of nitro-cellulose products and vaults used for the storage of inflammable motion picture films shall have one standard one-half ($\frac{1}{2}$) inch head for each $62\frac{1}{2}$ cubic feet of available storage space, or one (1) inch Conran* head for each 250 cubic feet of available storage space.

Measurements shall be taken from center to center of timbers.

Ceilings of modified mill construction having bays less than three (3) feet wide shall be treated as open joist construction and sprinkler heads and lines spaced accordingly.

Bay timbers spaced three (3) feet or more on centers, but less than five (5) feet on centers, will require special ruling by the administrative official having jurisdiction.

Joisted Construction. Under open finish joisted construction ceilings, floor, decks and roofs, the sprinkler lines shall be run at right angles to the joists and the heads "Staggered spaced" so that heads on one line will be opposite a point half way between heads on adjacent lines.

(a) For Standard one-half ($\frac{1}{2}$) inch heads the distance between lines of sprinklers shall not exceed ten (10) feet, and the distance between heads on each line shall not exceed eight (8) feet, the end heads on alternate lines being spaced not more than two (2) feet from wall or partition. Permission may be given by the administrative official having jurisdiction to install but one line of sprinklers, in each bay where girders project below the under side of joists and divide the ceiling into bays ten (10) to eleven and one-half ($11\frac{1}{2}$) feet wide from center to center of girders, and the heads shall then be spaced on each line so that the area covered by a single head does not exceed eighty (80) square feet. In all cases where such bays are over eleven and one-half ($11\frac{1}{2}$) feet wide, two or more lines of sprinklers shall be installed in each bay as required by the rules for spacing.

*Wherever the term "Conran head" is used in these Rules, it is to be taken as meaning either a Conran head of the type tested and approved by the Fire Department, or one that has passed similar tests by the Fire Department.

PUBLIC HEARING

Where girders and joists are flush at the bottom, heads shall be spaced according to the general rule.

(b) For Conran* one (1) inch heads the distance between adjacent lines shall not exceed twenty (20) feet and the distance between the heads on each line shall not exceed sixteen (16) feet, the end heads on alternate lines being spaced not more than four (4) feet from wall or partition. Where girders project below the under side of joists and divide the ceiling into bays not exceeding twenty (20) feet in width, measured from center to center of girders, one line shall be placed in the center of each bay. In bays exceeding twenty (20) feet in width at least two (2) lines shall be installed in each bay and in no case shall the distance between adjacent lines exceed twenty (20) feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads the distance between adjacent lines shall not exceed twenty-five (25) feet and the distance between the head on each line shall not exceed twenty (20) feet, the end head on alternate lines being spaced not more than five (5) feet from wall or partition. Where girders project below the under side of joists and divide the ceiling into bays not exceeding twenty-five (25) feet in width, measured from center to center of girders, one line shall be placed in the center of each bay. In bays exceeding twenty-five (25) feet in width at least two (2) lines shall be installed in each bay, and in no case shall the distance between adjacent lines exceed twenty-five (25) feet.

Smooth Finish, Sheathed or Plastered Ceilings. Under smooth finish, sheathed or plastered ceilings, in bays six (6) feet wide and over (measurements to be taken from center to center of timber, girder or other projection or support forming the bay), sprinkler heads and lines shall be spaced as follows:

(a) For standard one-half ($\frac{1}{2}$) inch heads—

One line of sprinklers shall be placed in the center of each bay for bays not exceeding twelve (12) feet in width, and the distance between the heads on each line shall not exceed the following:

- 8 feet in 12 foot bays;
- 9 feet in 11 foot bays;
- 10 feet in 6 to 10 foot bays.

Bays in excess of twelve (12) feet in width and less than twenty-three (23) feet in width, shall contain at least two (2) lines of sprinklers; bays twenty-three (23) feet in width or over shall have the lines therein not over ten (10) feet apart. In bays in excess of twelve (12) feet in width, not more than one hundred (100) square feet of ceiling area shall be allotted to any single head.

(b) For Conran* one (1) inch heads—

One line of sprinklers shall be placed in the center of each bay for bays not exceeding twenty (20) feet in width, and the distance between the heads on each line shall not exceed twenty (20) feet. Bays in excess of twenty (20) feet in width shall contain at least two (2) lines and in no case shall the distance between adjacent lines exceed twenty (20) feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads—

One line of sprinklers shall be placed in the center of each bay for bays not exceeding twenty-five (25) feet in width and the distance between the heads on each line shall not exceed twenty-five (25) feet. Bays in excess of twenty-five (25) feet in width shall contain at least two (2) lines and in no case shall the distance between adjacent lines exceed twenty-five (25) feet.

Fireproof Construction. The rules of slow-burning mill construction shall apply as far as practicable. The rule may be modified, however, the intent being to arrange the spacing of heads to protect the contents rather than the ceilings; but in no case shall the distance between a head on one line and a head on an adjacent line exceed the following:

(a) For standard one-half ($\frac{1}{2}$) inch heads, 12 feet.

(b) For Conran one (1) inch heads, 20 feet.

(c) For Conran one and one-quarter ($1\frac{1}{4}$) inch heads, 25 feet.

Distance From Walls. The distance from wall or partition to the first head on a sprinkler line shall not exceed one-half the allowable distance between the heads on such line. Additional heads may be required in the narrow pockets formed by bay timbers or beams and wall. Where beams, girders, columns, walls, partitions or other obstructions prevent the effective discharge of water, additional heads shall be installed to effectively sprinkle the area.

Vertical Shafts. In vertical shafts having inflammable sides, heads shall be provided within the shaft in addition to the head or heads at the tops of shafts, as follows:

(a) One standard one-half ($\frac{1}{2}$) inch head for each 200 square feet of inflammable surface.

(b) One Conran* one (1) inch head for each 400 square feet of inflammable surface.

(c) One Conran* one and one-quarter ($1\frac{1}{4}$) inch head for each 500 square feet of inflammable surface.

Such head or heads shall be installed at each floor when practicable, and always when shaft is trapped. Where practicable, heads shall be "staggered" at the alternate floor levels, particularly when only one head is installed at each floor level.

Pitched Roofs. Under a pitched roof sloping more steeply than one (1) foot in three (3) feet, heads shall be located in peak of roof, and those on either side of the peak shall be spaced according to the foregoing requirements. The distance between heads shall be measured on a line parallel with the roof. Where the roof meets the side wall or the floor line, the heads shall be placed not more than the following distance from such intersection:

(a) For standard one-half ($\frac{1}{2}$) inch heads, $3\frac{1}{2}$ feet.

(b) For Conran* one (1) inch heads, 7 feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, $8\frac{1}{2}$ feet.

Heads spaced not to exceed the following distance each way from the peak of roof, measured on a line parallel with the roof, may be used in lieu of heads located in peak of roof:

(a) For standard one-half ($\frac{1}{2}$) inch heads, $2\frac{1}{2}$ feet.

(b) For Conran* one (1) inch heads, 5 feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, $6\frac{1}{4}$ feet.

In sawtooth roof construction, the end heads on the branch line shall be spaced not to exceed the following distance from the peak of the sawtooth:

(a) For standard one-half ($\frac{1}{2}$) inch heads, $2\frac{1}{2}$ feet.

(b) For Conran* one (1) inch heads, 5 feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, $6\frac{1}{4}$ feet.

Special Locations and Variations. In special locations, such as over electric generating, power and transforming apparatus, over their controlling devices and switchboards, where water from the fire extinguishing equipment would be detrimental, the sprinkler lines and heads may be omitted at the discretion of the administrative official having jurisdiction, and when in his judgment a slight variation of this rule of spacing is desirable to effect a more efficient distribution of water for fire extinguishing purposes, the sprinkler lines and heads shall be spaced as he may direct.

Rule 14. Sprinkler Position. All sprinkler heads shall be located, wherever possible, in an upright position on top of the pipes, except that sprinkler heads on automatic wet pipe systems may be pendant on concealed piping and when construction or occupancy of a room or enclosure makes it preferable.

(a) Where standard one-half ($\frac{1}{2}$) inch heads are installed sprinkler deflectors shall be parallel to ceilings, roofs or the

PUBLIC HEARING

incline of stairs, but when installed in the peak of a pitched roof they shall be horizontal. Distance of deflectors from ceilings of mill or other smooth construction, or bottom of joists of open joist construction, shall be not less than three (3) inches nor more than ten (10) inches.

In fireproof buildings, the distance between deflectors and panel ceilings shall not exceed fifteen (15) inches.

Not less than eighteen (18) inches effective clear space shall be left below the sprinkler heads, so that they may discharge an unbroken spray blanket from sprinkler to sprinkler and sides of room when in operation. Any stock piles, racks or other obstructions interfering with such action shall not be permitted. *Sprinkler system piping shall not be used for the support of stock, clothing, etc.*

(b) Where Conran* heads are installed, the top of head shall be located the same distance below joists or ceiling as specified for deflectors in paragraph (a) of this rule; except that when heads are located under pitched roofs of piers or similar structures, they shall in general be installed in the upright position (not normal to slope of roof) and three (3) feet vertically below the underside of roof. When the administrative official having jurisdiction deems a variation of this rule advisable to obtain a more efficient distribution of water, the heads shall be located with respect to joists or ceiling, as he may direct.

Rule 15. Pipe Sizes. The number of heads on a given size pipe in one fire area in any story shall not exceed the following:

(a) For standard one-half ($\frac{1}{2}$) inch heads—

Size of Pipe	Maximum No. of Heads Allowed
$\frac{3}{4}$ inch	1 head
1 " "	2 heads
$1\frac{1}{4}$ " "	3 " "
$1\frac{1}{2}$ " "	5 " "
2 " "	10 " "
$2\frac{1}{2}$ " "	20 " "
3 " "	36 " "
$3\frac{1}{2}$ " "	55 " "
4 " "	80 " "
5 " "	140 " "
6 " "	200 " "
7 " "	300 " "
8 " "	420 " "

(b) For Conran* one (1) inch heads—

Size of Pipe	Maximum No. of Heads Allowed
1 inch	1 head
$1\frac{1}{4}$ " "	2 heads
$1\frac{1}{2}$ " "	3 " "
2 " "	4 " "
$2\frac{1}{2}$ " "	6 " "
3 " "	9 " "
4 " "	18 " "
5 " "	34 " "
6 " "	51 " "

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads—

Size of Pipe	Maximum No. of Heads Allowed
$1\frac{1}{4}$ inch	1 head
$1\frac{1}{2}$ " "	2 heads
2 " "	3 " "
$2\frac{1}{2}$ " "	4 " "
3 " "	6 " "
4 " "	12 " "
5 " "	21 " "
6 " "	40 " "
7 " "	60 " "
8 " "	84 " "

When it is desired to use pipe of larger size than eight (8) inches in diameter, special ruling will be required by the administrative official having jurisdiction as to the permissibility of its use and the number of heads that may be fed thereby.

Where practicable, it is desirable to arrange the piping so that the number of heads on a branch line will not exceed eight.

When the piping is arranged on the "gridiron" plan, the permissible number of heads may be doubled, provided the feed main is of the size indicated in the schedule for the total number of heads.

Where feed mains supply branch lines of only two heads each, the conditions approach those of long single lines. Such feed mains shall usually be centrally supplied where there are over eight (8) or ten (10) branch lines. Branch lines up to fourteen (14) in number may be fed from end, provided a two and one-half ($2\frac{1}{2}$) inch pipe does not supply more than sixteen (16) standard one-half ($\frac{1}{2}$) inch heads, in lieu of twenty (20).

Buildings having slatted floors, or large unprotected floor openings without approved stops, shall be treated as one room with reference to the pipe sizes, and the feed main shall be of sufficient size to accommodate the number of heads called for. Larger pipe sizes than are allowed in the schedule for a given number of heads may be required wherever the construction or conditions introduce unusually long runs of feed mains or many angles. Buildings with blind attics with small unprotected openings to floor below, may be piped from the system on the ceiling of floor below, provided pipe size schedule is not overloaded on sizes three (3) inches or under.

Rule 16. Feed Mains. The size of feed mains shall not be less than the size of riser and shall be arranged to run as direct as possible from source of water supply to riser.

Feed mains for stair or other towers without approved stops between floors, when piped on independent riser, shall be of sufficient size to accommodate the total number of sprinklers in such tower.

Rule 17. Risers. There shall be one or more separate risers in each building and in each section of the building divided by fire walls. Risers shall be arranged to provide "Center Central" or "Side Central" supply to feed main. Each riser shall be of sufficient size to supply all the heads on said riser in one story, according to the schedule of pipe sizes in Rule 15.

In buildings of fireproof construction, and for the purposes of this rule, a blank wall, or one in which the openings are protected by standard fire doors, may be considered as a fire wall, if of equivalent construction.

If the conditions warrant, special permission will be granted allowing the heads in a fire section of small area to be fed from the risers in another section, provided the total number of heads in such area does not exceed the following number per floor:

(a) For standard one-half ($\frac{1}{2}$) inch heads, 48.

(b) For Conran* one (1) inch heads, 12.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, 8.

Risers shall not be located close to windows, properly protected from mechanical injury and freezing and shall be properly supported on foundations and by floor plates, clamps, couplings or hangers.

No connections, such as for sill cocks, house service or hose outlets, shall be made with a sprinkler system riser or any part thereof.

Where gravity and pressure tanks feed through a common discharge pipe or "dead riser" to the foot of a riser and an air lock is likely to develop the discharge pipe of the gravity tank shall connect with the discharge pipe, or "dead riser", forty (40) feet below the bottom of the pressure tank.

PUBLIC HEARING

Rule 18. Pipes and Fittings. All pipe shall be full-weight standard wrought iron or steel threaded pipe, well reamed and screwed up tight into fittings without reducing the terway. Fittings shall be standard cast iron fittings, and all be long turn pattern on feed mains and risers.

Such fittings shall be designed and guaranteed for a working pressure of 150 pounds per square inch and must be capable of withstanding a hydrostatic test pressure of 750 pounds per square inch without failure.

All pipe shall be secured to the ceiling, walls and other parts of the building with standard steel, wrought or malleable iron hangers.

Extra heavy fittings shall be employed where the normal pressure in the pipe system exceeds one hundred and fifty (50) pounds per square inch, and shall be designed for a working pressure of 250 pounds per square inch and be capable of withstanding a hydrostatic test pressure of 1,250 pounds per square inch without failure.

All underground pipe shall comply with the specifications for cast iron pipe of the American Water Works Association.

Rule 19. Protection of Pipes and Sprinklers. When exposed to moisture, sprinkler pipes and hangers shall be protected against corrosion whenever found necessary by thoroughly cleaning the pipe of all scale and grease and painting with a coat of red lead and linseed oil paint or other acceptable moisture resistive paint. When exposed to chemical fumes, the pipe and fittings shall be coated with graphite or other approved chemical resistive paint. Care shall be taken not to paint the sprinkler heads.

Supply pipes of risers in low basements or low spaces under ground floors exposed to frost, shall be properly protected by a masonry or wood enclosure, properly heated, or filled with mineral wool, sawdust or tar mixed with granulated cork, extending below bottom of pipe and through the up flooring of ground floor, or the pipe shall be protected with three alternate layers of one-inch hair felt and building paper or by other approved method. When of wood, such enclosure shall be constructed double with a layer of paper between the two thicknesses of wood.

Where risers, drains, heating pipes, etc., pass through cinder concrete floors or partitions, they shall be protected with a metal sleeve or be grouted with cement mortar.

Wherever sprinklers are exposed to corrosion, the heads shall be protected with an approved hermetically sealed cover, or with an approved wax coating.

Rule 20. Drainage. All sprinkler pipe and fittings shall be so installed that they can be thoroughly drained, and where practicable, all piping shall be arranged to drain at the main drips.

Drains or drip pipes shall be so arranged as not to expose any part of the sprinkler system to frost, and shall be so connected, either by check valves or other means, that they will not [overthrow] overflow domestic service or other connections to the same sewer or house drain, or if carried through the wall and exposed to the weather, they shall be fitted with hoods or down-turned elbows.

Drains, pitched not less than one-quarter ($\frac{1}{4}$) inch in ten (10) feet, shall be installed:

- At the base of the main riser;
- At each alarm valve;
- At each dry-pipe valve;
- At each gravity tank;
- At each pressure tank.
- At each fire department connection;
- On each floor, if independent floor control valves are used;
- and

At each supply main, when the water in the same cannot be removed through any of the above drains. Such drains shall be installed with controlling valves so that flowing tests may be made to determine if the water supplies or connections from yard mains to the inside of the build-

ing are in order without causing water damage or overflowing service connections to the same house drain. Any such drain shall be not less than two (2) inches in size except that drains at independent floor valves [may be one and one-quarter ($1\frac{1}{4}$) inches in size] shall be not less than 1 inch in size where floor valves are not over $2\frac{1}{2}$ inches in size and $1\frac{1}{4}$ inches where floor valves are larger, and connected to a main drain riser of not less than $1\frac{1}{2}$ inches in size. The drain at the main riser shall discharge into a cone or sight drain, or if carried through the wall and exposed to the weather, it shall be fitted with a hood or down-turned elbow.

At an alarm valve at the top of a riser in a down-fed system a drain shall not be required.

At each gravity or pressure tank erected above roof of a building there shall be a 4-inch valved drain connection so arranged as to discharge on roof of building. And where a tank is on a separate structure altogether independent of buildings drain connection to be arranged to discharge at ground level.

On automatic wet pipe systems, the horizontal branch pipes shall be pitched not less than one-quarter ($\frac{1}{4}$) inch in ten (10) feet to drain towards the sources of supply with drip valves at the low points.

On automatic dry-pipe systems, branch pipes shall be pitched at least one-half ($\frac{1}{2}$) inch in ten (10) feet.

Rule 21. Test Pipe. [On] In all wet-pipe automatic sprinkler systems a test pipe of not less than $\frac{3}{4}$ inch in diameter shall be connected directly with each [riser] system but shall be connected to a pipe of not less than $1\frac{3}{4}$ inches in diameter in upper story and arranged to discharge, through a $\frac{1}{2}$ -inch brass outlet, preferably to a point where it can readily be seen. With long runs or many angles, size of test pipe [shall] should be increased to one (1) inch or larger. Controlling valve should be located at a sufficient distance from where the test pipe passes through the wall of the building so as to reduce to a minimum the chance of freezing of water in test pipe.

In all dry-pipe automatic sprinkler systems a $\frac{3}{4}$ -inch inspector's test pipe shall be installed at the end of the most distant branch line and fitted with a $\frac{3}{4}$ -inch shut-off valve stopped with a brass plug.

Rule 22. Pressure Gauges. A four and one-half ($4\frac{1}{2}$) inch double-spring Bourdon pressure gauge shall be provided in all automatic sprinkler systems as follows:

- Above dry-pipe valves;
- Below dry-pipe valves;
- At the pressure tank;
- At the air compressor;
- Above the alarm valve;
- Below the alarm valve; and

In the connections from city water supply.

Provision may be made for taking the pressure both above and below the alarm valve and the dry-pipe valve with only one gauge at each valve.

A gauge shall not be required at an alarm valve located at the top of a riser in a down-fed system.

Gauge connections shall be taken from the supply main or riser and not from the two-inch drain or test pipe.

Gauges shall be installed in a suitable place protected from freezing and be controlled by a valve with arrangements for draining. A plugged outlet, not less than one-quarter ($\frac{1}{4}$) inch in size, shall be located between each valve and gauge for purpose of installing the inspector's gauge.

Rule 23. Valves. All valves two (2) inches in diameter and under shall be of brass or bronze, or other approved [non-corrodible] non-corrosive material. Valves over two (2) inches in diameter shall be of brass, or bronze or iron body, brass mounted, or of other approved [non-corrodible] non-corrosive material.

All sidewalk Siamese inlet valves, caps and chains shall be of galvanized cast iron or other approved [non-corrodible] non-corrosive material.

PUBLIC HEARING

All gate valves shall be solid or double wedge disc, suffing box pattern with hand wheel, outside screw and yoke, or other approved indicator pattern.

All check valves shall be approved straight way regrinding pattern, so built that the clappers may be readily removed for repairs.

Rule 24. Water Supply Gate Valves. The piping connecting each source of water supply with the sprinkler system shall be provided with a gate valve of the outside screw and yoke type, sealed open and tagged to designate its purpose, so located as to control each source of water supply except that from fire department hose connections. All such gate valves shall be located within the building where easily visible and readily accessible and as close as possible to the supply inlet.

Rule 25. Water Supply Check Valves. The piping connecting each source of water supply with the sprinkler system, including fire department connections, shall be provided with a check valve.

On two-source systems, check valves shall have a gate valve on each side to permit repair of check without shutting off both supplies, except that where the two sources of supply consist of tanks located above the highest line of sprinklers, a gate valve need only be provided on the downstream side of each check valve.

Rule 26. Control Valves. All automatic sprinkler systems shall be provided with a main control or shutoff valve arranged to be readily accessible and sealed in the open position; except that when the sprinkler system is fed from water supplies on the roof of the building, independent and readily accessible floor control valves, sealed in the open position, may be installed.

When not more than ten (10) standard one-half ($\frac{1}{2}$) inch sprinkler heads or three (3) Conran* heads in any automatic wet pipe system are exposed to cold and subject to freezing, shutoff valves may be provided to discontinue the water supply to such heads between November 1 and April 1. A greater number of heads than specified above, located in places which cannot be properly heated, shall be controlled by an automatic dry-pipe valve.

Rule 27. Dry-Pipe Valves. A dry-pipe valve shall be taken to mean a valve automatically controlling the water supply of the sprinkler system in such a manner that under normal conditions its piping system beyond the valve is maintained dry, but in the event of fire, the valve automatically releases the water into the sprinkler system, for fire extinguishing purposes.

Dry-pipe valves shall, for the purpose of these rules, be classified as follows:

Type A, in which the valve is actuated by the release of compressed air in the sprinkler piping system, due to the opening of a sprinkler head; and

Type B, in which the valve is actuated by an approved trip under electric control of an approved automatic thermostatic fire alarm system.

Dry-pipe valves shall be located as near as practicable to the sprinkler system in an enclosed and accessible place protected from mechanical injury and freezing.

When anti-columning pipes are used, they shall be either lead lined or of brass.

Automatic wet-pipe sprinkler systems in which only twenty-five (25) per cent of the heads are required to be maintained dry for protection from freezing, shall have only such heads under dry-pipe valve control.

(a) When "Type A" valve is installed, the air pressure in sprinkler systems under such dry-pipe valve control shall not exceed forty (40) pounds per square inch, nor be permitted to fall below twenty-five (25) pounds per square inch, nor shall it be less than one-sixth ($\frac{1}{6}$) of the water pressure in any case.

The air compressor shall have a capacity of not less than eleven (11) cubic feet per minute and the air supply for the pump shall be taken, if possible, from a room containing dry air, or it shall be passed through a drying chamber containing calcium chloride, in order to avoid the introduction of moisture into the system.

The air pressure on such dry-pipe systems shall be maintained throughout the year.

Not more than the following number of heads shall be controlled by one "Type A" dry-pipe valve:

- (a) For standard one-half ($\frac{1}{2}$) inch heads400
- (b) For Conran* one (1) inch heads100
- (c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads 64

Where equipped with an approved quick-opening device the following number of heads may be controlled by one "Type A" dry-pipe valve:

- (a) For Standard one-half ($\frac{1}{2}$) inch heads800
- (b) For Conran* one (1) inch heads200
- (c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads 128

(b) When "Type B" valve is installed the actuating alarm system shall be designed to operate at a temperature lower than that required to open the sprinkler heads, and all connections between the alarm system and the dry-pipe valve shall be adequately protected against injury of any kind.

When required by the administrative official having jurisdiction, the dead end of every feed main in such dry-pipe system shall be provided with an air relief valve or vent, so constructed as to be normally open in order to permit the free escape of air from the system, but to close automatically against the escape of water.

Not more than the following number of heads shall be controlled by one "Type B" dry-pipe valve:

- (a) For Standard one-half ($\frac{1}{2}$) inch heads500
- (b) For Conran* one (1) inch heads125
- (c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads 84

Rule 28. Alarm Valve. All automatic wet pipe sprinkler systems shall be equipped with an alarm valve so constructed that a flow of water through a one-half ($\frac{1}{2}$) inch orifice will operate an electric or mechanical gong.

Dry pipe valves shall be equipped with a reliable device to give either an electrical or mechanical alarm.

Rule 29. High and Low Water and Pressure Alarm. All gravity tanks shall be equipped with a device to indicate when the water falls below or rises above the normal level in the tank, with an indicator or alarm located in the engineer's room near the pump.

All pressure tanks shall be equipped with a device to indicate when the pressure in the tank falls below seventy (70) or rises above eighty (80) pounds per square inch with an indicator or alarm located in the engineer's room [near the compressor].

Rule 30. Heating of Tanks. The water in all sprinkler tanks subject to freezing shall be protected by internally heating the water or enclosing the tank in a frost-proof house properly heated and lighted.

Rule 31. Concealed Pipe Systems. All pipe in concealed pipe systems shall be of standard full-weight wrought iron or steel, painted with two coats of protective paint, one before and one after installation. Such pipe shall be installed in ducts or be encased in cement mortar and shall be inspected prior to concealment. When installed in the concealed space between floor arches and ceiling, such pipe shall be supported by hangers and all pipe, fittings and hangers be protected with two coats of paint.

Rule 32. Preparation of Building. Floor or wall openings and other structural defects which prevent the banking up of heated air and retard the automatic action of sprinkler heads shall be provided with the necessary curtain boards and draft stops to permit specific control of the fire by the local sprinklers.

Curtain boards shall project at least three (3) inches below the lowest sprinkler.

PUBLIC HEARING

Rule 33. *Approval of Sprinkler System [Tests]. Before acceptance all automatic sprinkler systems, excluding the water supply tanks, shall be subjected after installation to a hydrostatic pressure of a test of at least fifty (50) pounds per square inch in excess of that which will be normally required and observed in the sprinkler system, such test pressure, however, never to be less than one hundred and fifty (150) pounds per square inch in any part of the system.*

All pressure tanks shall be tested after erection to a test pressure of one and one-half (1½) times the working pressure. To prevent the possibility of serious water damage in case of a break, the pressure shall be maintained by a hand pump, the main controlling gate being meanwhile closed. Brine or other corrosive chemicals shall not be used for testing systems.

In automatic dry-pipe systems with "Type A" valve control, an air pressure of forty (40) pounds per square inch shall be pumped up, be held for twenty-four (24) hours, and all leaks stopped which allow a loss of pressure of over one (2) pounds per square inch for the twenty-four (24) hours.

In the case of automatic dry-pipe systems with differential "Type A" valve, the valve shall be held off its seat during the test to prevent injuring the valve. Non-automatic systems shall be tested after installation not less than fifty (50) pounds per square inch in excess of the pressure necessary to reach the highest line of sprinklers.

All tests of installed systems shall be made by the contractor in the presence of the Fire Commissioner, or his authorized representative.

No piping, devices nor any portion of a newly constructed sprinkler system shall be covered up or permanently concealed until tested by the Bureau of Fire Prevention and approved of in writing, except piping passing through floors, walls, partitions or beams for distances equal to the thickness of such floors, walls, partitions or beams.

Rule 34. *Non-fireproof Business Buildings.* Automatic sprinklers required in non-fireproof business buildings under the provisions of Chapter 5, Article 4, Section 72, Code of Ordinances, unless otherwise specifically provided in these rules, shall consist of at least a One Source System.

Rule 35. *Dangerous or Hazardous Buildings.* Automatic sprinklers required in buildings having occupancies considered to be dangerous or hazardous by the Fire Commissioner shall consist of at least a one-source system unless otherwise specifically provided for in these rules.

Rule 36. *Factories and other Buildings.* Automatic sprinklers required in buildings under the provisions of the Code of Ordinances and the Labor Law shall consist of at least one-source system.

Rule [35] 37. *Theatre Buildings.* Automatic sprinklers required in theatre buildings under the provisions of Chapter 5, Article 25, Section 524, Code of Ordinances, shall consist of at least a One Source System.

Rule [36] 38. *Firework Storage.* Automatic sprinklers required in buildings in which fireworks are stored or sold under the provisions of Chapter 10, Article 6, Section 92, Code of Ordinances, shall consist of a Two Source System.

Rule [37] 39. *Nitro-Cellulose Products.* Automatic sprinklers as required in buildings in which nitro-cellulose products are stored under the provisions of Chapter 10, Article 19, Section 232, Code of Ordinances, shall consist of a system supplied from both approved gravity tank supply and an approved pressure tank supply, except that no change shall be required in supplies to automatic sprinkler equipments previously approved by the Fire Commissioner as two source systems, in conformity with the provisions of this rule as in force up to December 1, 1921.

In buildings wherein are stored or handled only limited quantities of nitro-cellulose products, not exceeding 500 pounds, the automatic sprinklers may consist of a two source system as provided for in Rule 12.

Rule [38] 40. *Inflammable Motion-Picture Films.* Automatic sprinklers, required in buildings in which inflammable motion-picture films are stored under the provisions of Chapter 10, Article 20, Section 241, Code of Ordinances, shall consist of a system supplied from both an approved gravity tank supply and an approved pressure tank supply except that no change shall be required in supplies to automatic sprinkler equipments previously approved by the Fire Commissioner as two source systems in conformity with the provisions of this rule as in force up to December 1st, 1921.

Rule [39] 41. *Existing Installations and Approvals.* Automatic extinguisher systems and devices heretofore approved and accepted by the authorities having jurisdiction shall not be required to conform to the provisions of these rules; and all such systems heretofore installed shall not be required to be altered to conform to these rules so long as the fire hazard due to construction and occupancy of the building is not increased or where substantial additions or extensions in height or area is made to the building when these rules shall apply if deemed advisable or necessary by the Fire Commissioner and the system after inspection is found to be in good working order.

Rule 42. *Communicating Openings.* When a building fully equipped with sprinklers communicates with another not so equipped the openings must be protected by approved fire doors on both sides of the wall, one of which must be automatic.

Rule 43. *Maintenance Inspections.* Automatic sprinkler systems shall be inspected at least once a month by the person in charge of the building, or by other competent person employed by the owner, to see that all parts of the system are in perfect working order, and the fire department connection or connections, if any, ready for immediate use by the Fire Department. A detailed record of each inspection shall be kept for examination by a representative of the Fire Department.

There shall be kept available at all times in the premises a supply of extra sprinklers, never less than six (6), to replace promptly any fused or damaged sprinklers. And there shall be one or more employees instructed in the maintenance of sprinkler system.

Rule 44. *Open Sprinklers.* When open sprinklers are required for exposure protection by the Fire Department as specified in the Building Code they shall be installed in accordance with the rules of the National Board of Fire Underwriters. Plans for such installation to be filed with the Fire Department for approval.

WARNING.

Notice is hereby given to all petitioners, appellants and applicants for relief at the hands of the Board of Standards and Appeals and of the Board of Appeals, and to all lawyers, architects and engineers representing owners or lessees in proceedings before these boards—

First, That if they do not appear in person or by representative at the hearing on their case, dismissal for lack of prosecution is likely to result.

Second, That due and ample notice of the date set for hearing is provided in the publication in this BULLETIN of the calendars of these boards, each case being set down by Calendar Number and premises under the date of the hearing.

Third, That no plea of ignorance of the date of the hearing can be entertained in view of this publication and

of the posting of the calendars on the bulletin board in the offices of the board and of the further publication of the calendars in the daily press.

Fourth, That no one is entitled to written notice of the date for the hearing in his case, and that the plea of failure to receive such notice is no excuse for neglect to appear.

Fifth, That the business of these boards is to dispose of all cases promptly, for the reason that the pendency of an appeal or petition ties the hands of the administrative official in enforcing his order; therefore, no appeal or petition will be allowed to be hung up by reason of failure of the appellant or petitioner to file necessary data, or by any other method of delay.

BOARD OF STANDARDS AND APPEALS,
Room 1001, Municipal Building,
New York City.

Enclosed please find two dollars and a half (\$2.50) for subscription for one year to THE BULLETIN OF THE BOARD OF STANDARDS AND APPEALS. Please mail THE BULLETIN to

Name
Street
P. O.

My subscription is to begin with the issue for 1925.

OFFICE—Municipal Building, Rooms 1001 to 1015.

TELEPHONE—Worth 0184.

OFFICE HOURS—9 a. m. to 5 p. m. Saturdays, 9 a. m. to 12 noon.

All communications should be addressed to the chairman of the board.

CONTENTS

This issue of the Bulletin contains, in the order given—

Docket.
Call of Clerk's Calendar.
The Trial Calendar.
Notices in Building Zone Cases.
Minutes of Meeting, Board of Appeals, September 15, 1925.
Minutes of Meeting, Board of Standards and Appeals, September 15, 1925.
Notice of Public Hearing.
Progress Report.

DATES AND HOURS OF MEETING.

Board of Appeals, Tuesdays, at 10 a. m.
Special meetings as listed in this Calendar.
Call of Clerk's Calendar, Tuesdays, at 2 p. m.
Board of Standards and Appeals, as listed in the Calendar.
All hearings are held in Room 1013, Municipal Building Manhattan.

HOURS FOR CONSULTATION.

10 A. M. to 1 P. M.

Any person desiring to consult the chairman or the engineers, pertaining to the work of either board, will be seen only between the hours of ten in the morning and one in the afternoon—Saturdays excepted.

CALL OF CLERK'S CALENDAR.

The Clerk's Calendar consists of applications under the Building Zone Resolution, and its object is to give interested property owners opportunity to file objections, if any, and will be called in Room 1013, Tuesday, September 22, 1925, at 2 o'clock. At this call each case is set for hearing on a definite day.

The next subsequent Call of the Calendar will be on Tuesday, September 29, 1925, at 2 o'clock.

The Clerk's Calendar is not to be confused with the calendar of cases that have been definitely set for hearing on fixed days.

NOTICE TO APPELLANTS AND PETITIONERS.

No appeal, application or petition will be entertained in connection with which court proceedings are pending or in progress, nor accepted that are not filed within twenty days from the date of the action of the Administrative Official.

Any communication purporting to be an appeal, application or petition shall be regarded as a mere notice of intention to seek relief until it is filed on the form required by the rules of this board.

Upon receipt of any such communication the writer will be supplied with the official forms for presenting his appeal, application or petition, and if he fails to supply the data required thereon, within twenty days, his case may be dismissed for lack of prosecution.

At the time of filing an application, the appellant or petitioner shall forward a signed notice of appeal addressed to the administrative official (either superintendent of buildings or fire commissioner) and file with this board a duplicate of said notice.

Petitioners are advised that their plans must indicate the points of the compass so as to establish the true location and position of the property, the subject of the appeal.

Appeals, applications and petitions will be simplified and expedited by conforming to these directions.

WILLIAM E. WALSH, Chairman.

ACTION OF BOARD—Appeal denied.

THE VOTE TO GRANT—

Affirmative 0

Negative:: Chairman Walsh, Messrs. Kennedy, Dowd, Holland, Connell and Fire Chief

Kenlon 6

Absent: Mr. Gunnison 1

THE RESOLUTION:

(432-25-A)

WHEREAS, United States Printing & Lithographing Company, owner, filed, April 21, 1925, an appeal, with the board of appeals, from order of the fire commissioner, affecting premises 83-101 North Third street and 209-219 Wythe avenue, Brooklyn; and

WHEREAS, the order of the fire commissioner reads:

"1. Disconnect all hose outlets from sprinkler risers in all buildings. Sec. 20, Ch. 12, Code of Ordinances."; and

WHEREAS, the premises consist of three (3) non-fireproof buildings with a total frontage of 236 ft. and a depth of 120 ft., Building No. 1 being 6 stories in height, Buildings 2 and 3, 5 stories in height; OCCUPIED as factories with a total of 302 persons in the entire premises, the buildings being equipped with a sprinkler system supplied by two (2) 30,000 gallon gravity tanks and a 60,000 gallon reserve tank connected to fire pump, the sprinkler risers in Building No. 1 are five (5) inches in diameter and each supplies 124 ½-inch sprinkler heads, in Building No. 2 the risers are 4½ inches and each supplies 96 ½-inch sprinkler

heads, in Building No. 3, risers are 4 inches and each supplies 48 sprinkler heads. There is a ½-inch hose connection to each riser; and

WHEREAS, appellant contends that the risers are good for a considerable increase of sprinkler heads and that the water used by the hose lines is only equivalent to the flow of one head and that the building is equipped with adequate means of egress; and

WHEREAS, the use of hose outlets causes water flow and transmits a fire alarm signal, and the fact that the practice has never been approved by board and is contrary to the rules and regulations.

Resolved, that the order of the fire commissioner be and it hereby is affirmed, and the appeal be and it hereby is denied.

452-25-A.

APPELLANT—Bush Terminal Company, owner.
SUBJECT—Appeal from order of fire commissioner.
PREMISES AFFECTED—4009-4015 First avenue, Brooklyn.

APPEARANCES—

For Appellant: A. K. Vollmer.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Appeal granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Kenlon 6

Negative 0

Absent: Mr. Gunnison 1

THE RESOLUTION:

(452-25-A)

WHEREAS, Bush Terminal Company, owner, filed, April 29, 1925, an appeal, with the board of appeals, from an order of the fire commissioner, affecting premises 4009-4015 First avenue, Borough of Brooklyn; and

WHEREAS, the order of the fire commissioner, dated April 6, 1925, reads (Order No. 74572-F):

"1. Install a standpipe system with risers 4 in. in diameter tested to withstand a pressure of 300 lbs. per square inch, extending from cellar to roof, with necessary check valves and 2½ inch regulation Fire Department outlets on each story (including basements, cellars and roofs), placed within main stairway enclosure. Each outlet to be provided with sufficient feet of 2½ inch standard hose attached thereto."; and

WHEREAS, the building is non-fireproof, one story in height, 66.33 ft. by 250 ft. (approximately 16,000 sq. ft.) in area; OCCUPIED for the storage of cotton, 5 persons; and

WHEREAS, appellant contends that the building is equipped with a sprinkler system; that a city fire hydrant is located in the immediate vicinity, and that it is proposed to demolish the building in the very near future.

Resolved, that the order of the fire commissioner be and it hereby is modified, and the appeal be and it hereby is granted on condition that an approved sprinkler system, in accordance with the rules of the board of standards and appeals for existing sprinkler equipments, shall be maintained; and granted only so long as the present occupancy and use shall remain unchanged and that the building shall not be increased in area, height or dimensions.

453-25-A.

APPELLANT—Bush Terminal Company, owner.
SUBJECT—Appeal from order of fire commissioner.
PREMISES AFFECTED—4017-21 First Avenue, Brooklyn.

APPEARANCES—

For Appellant: A. K. Vollmer.

For Administration: Inspector Maher of fire department.

Kenlon 6
Negative 0
Absent: Mr. Gunnison 1

THE RESOLUTION:

(453-25-A)

WHEREAS, Bush Terminal Company, owner, filed, April 1925, an appeal, with the board of appeals, from an order of the fire commissioner, affecting premises 4017-21 First Avenue, Borough of Brooklyn; and

WHEREAS, the order of the fire commissioner, dated March 28, 1925, reads (Order No. 74013-F):

"1. Install a standpipe system with risers 4 in. in diameter tested to withstand a pressure of 300 lbs. per square inch, extending from cellar to roof, with necessary check valves and 2½ inch regulation Fire Department outlets on each story (including basements, cellars and roofs), placed within main stairway enclosure. Each outlet to be provided with sufficient feet of 2½ inch standard hose attached thereto. * * *";

WHEREAS, the building is non-fireproof, one story in height, 33 ft. by 250 ft. (approximately 16,000 sq. ft.) in area; OCCUPIED for the storage of cotton and copac; and

WHEREAS, appellant contends that the building is equipped with a sprinkler system; that there is a city fire hydrant in immediate vicinity; that the building is only one story in height, and proposes, further, to demolish the building in the very near future.

Resolved, that the order of the fire commissioner be and it hereby is modified, and the appeal be and it hereby is granted on condition that an approved sprinkler system, in accordance with the rules of the board of standards and appeals for existing sprinkler equipments, shall be maintained; and granted only so long as the present occupancy use shall remain unchanged and that the building shall not be increased in area, height or dimensions.

473-25-A.

APPELLANT—Barnett Kadin, for Hunts Point Garage, Inc., owner.

SUBJECT—Appeal from decision of fire commissioner.

PREMISES AFFECTED—1008 Whitlock Avenue, The Bronx.

APPEARANCES—

For Appellant: Barnett Kadin.

For Administration: Inspector Carroll of fire department.

ACTION OF BOARD—Appeal granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Kennedy,
Dowd, Holland, Connell and Fire Chief
Kenlon 6
Negative 0
Absent: Mr. Gunnison 1

THE RESOLUTION:

(472-25-A)

WHEREAS, Barnett Kadin, for Hunts Point Garage, Inc., owner, filed, May 4, 1925, an appeal, with the board of appeals, from a decision of the fire commissioner, affecting premises 1008 Whitlock Avenue, Borough of the Bronx;

WHEREAS, the decision of the fire commissioner, rendered April 23, 1925, reads (Alteration Application No. 172-25):

"4. Install throughout entire building a 4 in. regulation standpipe with 3500 gallon tank above roof, all as per Section 581, Chapter 5, Code of Ordinances and as per Rules of the Board of Standards and Appeals.";

WHEREAS, the building is non-fireproof, one story in height, 107 ft. by 150 ft. and 127 ft., irregular, in depth, about 14,550 sq. ft. in area; OCCUPIED as a public garage; EQUIPPED with 500 ft. of 2½ in. standpipe, fed by a 12 in. street main having 50 pounds pressure; and

WHEREAS, appellant proposes to erect a one-story extension at east side with connecting doorways, about 13,250 ft. in area; to equip the buildings throughout with an automatic sprinkler system; to extend the present 2½ in. standpipe system 150 ft. into the new extension; and

WHEREAS, the appellant claims that on completion of the work the 12 in. street main will be fed two ways; that there are ten (10) fire hydrants within one block distant from the building; that the building is accessible to firemen from three streets, and further contends, under such conditions, that the fire protection would be adequate.

Resolved, that the decision of the fire commissioner be and it hereby is modified, and the appeal be and it hereby is granted on condition that this premises shall be equipped with an independent 2½ in. standpipe line, with direct street connection, in addition to the standpipe equipment of the existing adjoining building; that any openings between this structure and adjoining buildings shall be equipped with self-closing fireproof door on one side.

473-25-A.

APPELLANT—Samuel Rosenblum, for Frank Majoros, lessee.

SUBJECT—Appeal from order of fire commissioner.

PREMISES AFFECTED—1161 First Avenue, Manhattan.

APPEARANCES—

For Appellant: Samuel Rosenblum, Mrs. Majoros.

For Administration: Inspector Lynch of fire department.

ACTION OF BOARD—Appeal granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Kennedy,
Dowd, Connell and Holland 5
Negative: Fire Chief Kenlon 1
Absent: Mr. Gunnison 1

THE RESOLUTION:

(473-25-A)

WHEREAS, Samuel Rosenblum, for Frank Majoros, lessee, filed, March 4, 1925, an appeal, with the board of appeals, from an order of the fire commissioner, affecting premises 1161 First Avenue, Manhattan; and

WHEREAS, the order of the fire commissioner, dated April 15, 1925, reads:

"With reference to your application dated March 3, 1925, for a permit to maintain the storage of oil paints, varnish, etc., for sale at above mentioned premises, we regret to inform you the Fire Commissioner is without power to grant such a permit for the reason as building is also occupied and maintained as a storage garage, the issuing of permit requested would be in conflict, Sec. 151, C. & D., Chapter 10, Code of Ordinances.

"You are therefore ordered to

"1. Discontinue the storage and sale of oil paints, turpentine and varnishes.";

and

WHEREAS, the building is non-fireproof, two stories in height, 150 ft. 5 in. by 100 ft. in area. OCCUPIED: 1st story, paint store, public garage and poultry market, 50 persons; 2nd story, garage, 20 persons; and

WHEREAS, the appellant claims the paint store occupies a small space on the 1st story; it is separated from the garage portion by 8 in. brick walls; he further contends there is no fire hazard by reason of the paint store, and requests the board to grant a permit to continue the storage of paints in the conduct of his business as heretofore.

Resolved, that the order of the fire commissioner be and it hereby is modified, and the appeal be and it hereby is granted on condition that the walls of the store shall be

MINUTES

unpierced throughout their entire height and length and that the ceiling shall be constructed of reinforced concrete; that the use shall be limited to retail paint business; that the quantities of paint maintained on premises shall not exceed those permitted under permit of fire department, No. 105122, issued June 18, 1925; and that the paint shop occupancy of this store shall be discontinued on or before April 1, 1927.

APPELLANT—Daniel C. Kane, for Brooklyn Edison Co., Inc., owner.

SUBJECT—Appeal from decision of fire commissioner.

PREMISES AFFECTED—168-208 Marshall street, Brooklyn.

APPEARANCES—

For Appellant: Daniel C. Kane, G. L. Knight.

For Administration: Inspector Carroll of fire department.

ACTION OF BOARD—Appeal granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Kennedy, Dowd, Holland, Connell and Fire Chief

Kenlon 6

Negative 0

Absent: Mr. Gunnison 1

THE RESOLUTION:

(628-25-A)

WHEREAS, Daniel C. Kane, for Brooklyn Edison Co., Inc., owner, filed, June 17, 1925, an appeal, with the board of appeals, from a decision of the fire commissioner, affecting premises 168-208 Marshall street, Brooklyn; and

WHEREAS, the decision of the fire commissioner, rendered June 2, 1925, reads:

"1. Standpipe may not be removed. See Section 581, Article 28, Chapter 5, Code of Ordinances.";

and

WHEREAS, the building is fireproof, seven stories in height, 276 ft. 8 in. by 87 ft. 5 in. in area; OCCUPIED as a transformer and switch house, for electric current service, total 34 persons; and

WHEREAS, the appellant proposes to erect an extension at west side, six stories in height, 131 ft. 10 in. by 87 ft. 5 in. in area; to omit the entire standpipe system; to remove all such pipes from existing switch building; also to maintain throughout each building 21 quarts of Pyrene, 67½ gallons of soda acid, 320 gallons of Foamite and 60 pails of sand; and

WHEREAS, the appellant claims the presence of any water in this building which houses high tension electrical apparatus is more of a hazard than a protection and its use would be perilous to both firemen and occupants; he also files a letter in the case from a Cleveland electric plant, citing a disaster caused by the presence of water, and requests the board to accept the above conditions in lieu of a standpipe installation.

Resolved, that a decision of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted*, for the removal of standpipe in existing building, so long as building is maintained and operated as an electrical distributing transformer station, *on condition* that the following fire extinguishing agents shall be maintained on the premises:

Not less than 21 qts. pyrene;

An approved 2½ gal. fire extinguisher;

67½ gals. of soda acid;

320 gals. of foamite;

60 pails of sand,

placed and located as described in schedule marked "A" as filed in this appeal.

417-25-A.

APPELLANT—James W. Byrnes, for Acanthus Realty Company, Inc., owner.

SUBJECT—Appeal from order of fire commissioner.

PREMISES AFFECTED—1188-1190 Fulton street and 1247-53 Bedford avenue, Brooklyn.

APPEARANCES—

For Appellant: James W. Byrnes.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Appeal granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Dowd, Connell, Holland and Fire Chief Kenlon ..

Negative: Mr. Kennedy

Absent: Mr. Gunnison

THE RESOLUTION:

(417-25-A)

WHEREAS, James W. Byrnes, for Acanthus Realty Company, Inc., owner, filed, April 17, 1925, an appeal, with the board of appeals, from an order of the fire commissioner, affecting premises 1188-90 Fulton street and 1247-53 Bedford avenue, Borough of Brooklyn; and

WHEREAS, the order of the fire commissioner, dated February 20, 1925, reads:

"Order No. 71935-F:

"1. Provide a separate and distinct system of *Automatic Sprinklers* throughout building having at least one source of water supply, arranged and equipped as provided in the rules for fire extinguishing appliances adopted by the Board of Standards and Appeals May 24, 1917, as amended May 2, 1918, and January 21, 1919, effective February 17, 1919.";

and

WHEREAS, the building is non-fireproof, four stories in height, there being a frontage of 95 ft. on Fulton street and 105 ft. on Bedford avenue. OCCUPIED: 1st story, stores; 2nd story, northerly portion, vacant at present; southerly portion, restaurant, 12 persons; 3rd story, manufacture of paper boxes, 25 persons; 4th story, paper patterns, 35 persons; and

WHEREAS, appellant proposes that no renewals will be given upon the termination of the leases of the occupants of the two upper stories, the lease on the 3rd story terminating May 1, 1926, and on the 4th story, on September 1, 1925; and proposes, further, to install a 40 gallon extinguisher on the 3rd and 4th stories; and contends that these stores will not be rented to concerns carrying on similar work.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted*, only so far as it affects the occupancy of 3rd story, *on condition* that an approved 40 gallon portable fire extinguisher shall be installed on 3rd story; that said use and occupancy shall be discontinued on 3rd story on or about May 1, 1926; and *denied* in all other respects.

501-25-A.

APPELLANT—Gustav Lange, Jr., for Elco Realty Company, Inc., owner.

SUBJECT—Appeal from order of fire commissioner as cited in order of fire commissioner.

PREMISES AFFECTED—105 Bleecker street and 186-188 Greene street, Manhattan.

APPEARANCES—

For Appellant: John J. Gilmartin.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Appeal granted on condition.

CONDITIONS—As specified in resolution.

Affirmative: Chairman Walsh, Messrs. Kennedy, Dowd, Holland, Connell and Fire Chief

Kenlon 6

Negative 0

Absent: Mr. Gunnison 1

MINUTES

THE RESOLUTION:

(501-25-A)

WHEREAS, Gustav Lange, Jr., vice-president, for Elco 'Alty' Company, Inc., owner, filed, May 13, 1925, an appeal, with the board of appeals, from an order of the fire commissioner, affecting premises 105 Bleecker street and 6-188 Greene street, Borough of Manhattan; and WHEREAS, the order of the fire commissioner, dated April 1924, reads (Order No. 58187-F):

"1. Install a standpipe system with risers 4 in. in diameter tested to withstand a pressure of 300 lbs. per square inch, extending from cellar to roof, with necessary check valves and 2½ inch regulation Fire Department outlets on each story (including basements, cellars and roofs), placed within main stairway enclosure. Such outlet to be provided with sufficient feet of 2½ inch standard hose attached thereto."

WHEREAS, the building is fireproof, eight stories (87 ft.) height, 25 ft. by 120 ft. in area; OCCUPIED as a tenement factory, 73 persons above the 1st story (the 3rd story being vacant at present); and

WHEREAS, appellant contends that the building is only a few feet above the legal limit of 85 ft. and that a similar order was rescinded by the board of review of the fire department on February 25, 1919, and has filed a copy of letter to this effect.

Resolved, that the order of the fire commissioner be and hereby is modified, and the appeal be and it hereby is granted on condition that the building shall not be increased in height, area or dimensions; that all exits as required by the labor law shall be maintained; and granted only so long as conditions throughout as to occupancy and use remain substantially unchanged.

31-24-A.

APPELLANT—Board of Education, City of New York, owner.

SUBJECT—Appeal from decision of superintendent of buildings.

PREMISES AFFECTED—508-534 West 212th street, Manhattan.

APPEARANCES—None.

ACTION OF BOARD—Appeal dismissed for lack of prosecution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Kennedy, Dowd, Holland, Connell and Fire Chief Kenlon 6
Negative 0
Absent: Mr. Gunnison 1

THE RESOLUTION:

(331-24-A)

WHEREAS, Board of Education, for City of New York, owner, filed, March 3, 1924, an appeal, with the board of appeals, from a decision of the superintendent of buildings, affecting premises 508-534 West 212th street, Borough of Manhattan; and

WHEREAS, the decision of the superintendent of buildings, dated February 13, 1924, reads:

"7. Standpipe must be installed as required by Section 581 of Code."

and

WHEREAS, the building is fireproof, five stories (83 ft. 6 in.) in height, 193 ft. 6 in. by 172 ft. 4 in., irregular (about 20,000 sq. ft.) in area; to be OCCUPIED as a public school; and

WHEREAS, appellant contends the installation of standpipes might prove a menace instead of a safeguard to the lives of the occupants and that pupils and teachers in schools ought, in case of fire, devote all their efforts to making a safe exit, leaving the problem of fire fighting to the fire department; and

WHEREAS, this case has been before the board since March 3, 1924.

Resolved, that the appeal be and it hereby is dismissed for lack of prosecution.

69-25-A.

APPELLANT—Croker National Fire Prevention Eng. Co., for Memorial Hospital, owner.

SUBJECT—Appeal from order of fire commissioner.

PREMISES AFFECTED—2 West 106th street and 451 Central Park West, Manhattan.

APPEARANCES—

For Appellant: Herman E. Horwood.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Appeal granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Dowd, Connell, Holland and Fire Chief Kenlon .. 5
Negative: Mr. Kennedy 1
Absent: Mr. Gunnison 1

THE RESOLUTION:

(69-25-A)

WHEREAS, Croker Nat'l Fire Prev. Eng. Co., for Memorial Hospital, owner, filed, January 17, 1925, an appeal, with the board of appeals, from an order of the fire commissioner, affecting premises 2 West 106th street and 451 Central Park West, Manhattan; and

WHEREAS, the order of the fire commissioner, rendered May 19, 1924, reads:

"1. Install a standpipe system with risers 4 in. in diameter tested to withstand a pressure of 300 lbs. per square inch, extending from cellar to roof, with necessary check valves and 2½ in. regulation Fire Department outlets on each story (including basements, cellars and roofs), placed within main stairway enclosure. Each outlet to be provided with sufficient feet of 2½ in. standard hose attached thereto."

and

WHEREAS, the premises consists of three non-fireproof attached buildings, three, four and five stories in height, irregular in plan; the main building facing Central Park West and West 106th street, being about 7,460 sq. ft., the annex facing 105th street, being about 6,798 sq. ft., the laboratory about 2,242 sq. ft., aggregating a total floor area about 16,500 sq. ft., there being no connection above the 1st story to the laboratory building and no connection between the other two buildings above the 3rd story; OCCUPIED as a hospital, total of 165 persons; and

WHEREAS, the appellant proposes to install fire doors, one swinging and one self-closing, to each opening between the annex and main building at 1st, 2nd and 3rd stories, as shown on plans; and

WHEREAS, the appellant claims the combined floor area of the main building and annex is less than 15,000 sq. ft. above the 1st story; that no floor area on either side of a fire wall exceeds 10,000 sq. ft.; that the proposed fire doors will divide the building into floor areas, which under the rules make it exempt from standpipe requirements, and further contends that the fire protection will then be adequate.

Resolved, that the order of the fire commissioner be and it hereby is modified, and the appeal be and it hereby is granted on condition that the individual units of the building group shall be separated at the corridors with self-closing fireproof doors; and granted so long as conditions as to occupancy and use shall remain unchanged; and the area and dimensions of individual units shall not be increased.

236-25-A.

APPELLANT—Petroleum Heat & Power Co., for Jacob Rubin & Sons, Inc., owner.

SUBJECT—Appeal from decision of fire commissioner.

PREMISES AFFECTED—1380 Metropolitan avenue, Queens.

APPEARANCES—

For Appellant: G. P. Knight.

MINUTES

For Administration: Inspector Carroll of fire department.

ACTION OF BOARD—Appeal granted on condition.

Dowd, Holland, Connell and Fire Chief
Kenlon 6
Negative 0
Absent: Mr. Gunnison 1

THE RESOLUTION:

(236-25-A)

WHEREAS, Petroleum Heat & Power Co., for Jacob Rubin & Sons, Inc., owner, filed, February 26, 1925, an appeal, with the board of appeals, from a decision of the fire commissioner, affecting premises 1380 Metropolitan avenue, Borough of Queens; and

WHEREAS, the decision of the fire commissioner, rendered February 9, 1925, reads:

"Alteration Application No. 2434-24:

"9. Pumps must be installed in duplicate where fire protection is dependent on the use of fuel oil for heating or steam."

and

WHEREAS, the building is fireproof, two stories in height, 214.20 ft. by 165.68 ft., irregular in area; OCCUPIED as glass warehouse and manufacturing; equipped with a standpipe and also a sprinkler system; a fuel oil burning equipment having been installed in accordance with the requirements of the fuel oil rules except as to the requirement of pumps installed in duplicate; and

WHEREAS, the appellant claims, under rule 11, subdivision B, pumps in duplicate are required only when the fire protection is depending upon the use of fuel oil for steam power to run the fire pump and not when depending upon steam only to heat the water in the standpipe reserve tank during extreme cold weather as in this case; and contends that it will work a hardship to be compelled to install an additional oil pump in his small plant, and requests the board to relieve him of such requirement.

Resolved, that the decision of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted*, only so far as it affects the duplicate pump system, *on condition* that the fuel oil installation shall comply with the fuel oil rules in all other respects; that the pumps and boilers shall be located in a separate room, enclosed in walls of approved masonry; and that the building shall not be increased in area, size or dimensions.

235-25-A.

APPELLANT—Driscoll & Jean Roy, owners.

SUBJECT—Appeal from order of fire commissioner.

PREMISES AFFECTED—217-219 West 126th street, Manhattan.

APPEARANCES—

For Appellant: Louis Jean Roy.

For Administration: Inspector Lynch of fire department.

ACTION OF BOARD—Appeal granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Dowd, Holland, Connell and Fire Chief
Kenlon 6
Negative 0
Absent: Mr. Gunnison 1

THE RESOLUTION:

(235-25-A)

WHEREAS, Driscoll & Jean Roy, owners, filed, January 22, 1925, an appeal, with the board of appeals, from an order of the fire commissioner, affecting premises 217-219 West 126th street, Manhattan; and

WHEREAS, the order of the fire commissioner, dated December 19, 1924, reads:

"1. Discontinue the storage of motorcycles not authorized by the Code of Ordinances on these premises

"REASON—Sec. 191-2 of Code of Ordinances provides that no permit shall be granted for premises below grade story of any building and as per resolution of Board of Appeals of Nov. 13, 1923."

and

WHEREAS, the building is non-fireproof, three stories and basement in height, 25 ft. by 45 ft. in area, with a one-story, 25 ft. by 55 ft. extension at the rear. OCCUPIED: Basement, motorcycle garage and repair shop, 2 persons; 1st story, storage; 2nd and 3rd stories, dwelling of owner; and

WHEREAS, appellant contends that the floor of the basement is only 15 in. below curb level; that the ceiling of the garage portion of the premises is metal on 1/2 in. plaster boards; that there is no opening between the garage portion and the remainder of the building and that no gasoline, other than that in the tanks of the motorcycles, is stored on the premises.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted on condition* that the floor level on which the motorcycles are stored shall at no point be more than 15 in. below sidewalk level.

381-25-A.

APPELLANT—I. Margon & C. Glaser, for Gerard Avenue Construction Co., owner.

SUBJECT—Appeal from order of fire commissioner.

PREMISES AFFECTED—1229-1231 Gerard avenue, The Bronx.

APPEARANCES—

THE RESOLUTION:

(381-25-A)

WHEREAS, I. Margon & C. Glaser, for Gerard Avenue Construction Company, owner, filed, April 8, 1925, an appeal, with the board of appeals, from orders of the fire commissioner, affecting premises 1229-1231 Gerard avenue, The Bronx; and

WHEREAS, the orders of the fire commissioner, dated March 19, 1925, reads:

"Order No. 28705-LC, premises 1229 Gerard Avenue:

"You are hereby notified that an inspection of premises 1229 Gerard Avenue, Bronx, used as a non-storage garage, shows that the following must be done before permit requested by you can be issued:

"1. Provide a fire escape or other secondary means of egress for each story above the garage. Section 154, Chapter 10, Code of Ordinances."

"Order No. 28679-LC, premises 1231 Gerard Avenue:

"You are hereby notified that an inspection of premises 1231 Gerard Avenue, Bronx, used as a non-storage garage, shows that the following must be done before permit requested by you can be issued:

"1. Provide a fire escape or other secondary means of egress for each story above the garage. Section 154, Chapter 10, Code of Ordinances."

and

WHEREAS, the premises consist of a plot of ground upon which is located two non-fireproof buildings (separated by a brick party wall), three stories in height, and each 18 ft. by 82 ft. in area; the occupancy of each being: 1st story

MINUTES

boiler room and garage for two auto vehicles; 2nd story and 3rd story, dwellings, one family on each story; and

WHEREAS, appellant contends that a Davy fire escape has been provided for each apartment, and proposes to fire-retard the ceilings of the garage portions of the premises with plaster boards and 26 gauge metal.

Resolved, that the orders of the fire commissioner be and they hereby are *modified*, and the appeal be and it hereby is *granted on condition* that a balcony fire escape shall be provided on the rear of the building from each apartment, embracing at least one window, connected by vertical ladder, with drop ladder in guides from lowest balcony to yard; and that the boiler room shall be separated from garage area by approved wall of masonry, and that not more than four automobiles shall be maintained on the entire premises, and that no gasoline storage equipment shall be maintained.

369-25-A.

APPELLANT—A. Ramona Dean and Louise F. Dean, owners.

SUBJECT—Appeal from order of fire commissioner.

PREMISES AFFECTED—284 Chauncey street, Brooklyn.

APPEARANCES—

For Appellant: William M. Dean.

For Administration: Inspector Lynch of fire department.

ACTION OF BOARD—Appeal granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Kennedy, Dowd, Holland, Connell and Fire Chief

Kenlon 6

Negative 0

Absent: Mr. Gunnison 1

THE RESOLUTION:

(369-25-A)

WHEREAS, A. Ramona Dean and Louise F. Dean, owners, filed, April 4, 1924, an appeal, with the board of appeals, from an order of the fire commissioner, affecting premises 284 Chauncey street, Borough of Brooklyn; and

WHEREAS, the order of the fire commissioner, dated March 16, 1925, reads:

"With reference to your application dated April 22nd, 1925, for a permit to maintain a garage at the above location, I regret to inform you that I am without power to grant such a permit for the reason that Section 15, Chapter 10, Code of Ordinances, provides that no permit shall be issued for a garage in a building in which more than two stories above the garage are used as living apartments.

"You are therefore ordered to remove all automobiles having gasoline in their fuel tanks and discontinue the use of premises as a garage."

and

WHEREAS, the building is non-fireproof, three stories and cellar in height, 18 ft. by 34 ft. in area. OCCUPIED: Cellar, as a garage; 1st, 2nd and 3rd stories, as dwellings; the garage portion being separated from the remainder of the premises by 4 in. terra cotta partition walls, with a metal-covered wooden door at the opening therein, and also by a ceiling of plaster boards covered with 26 gauge metal; and

WHEREAS, appellant contends that there are no public garages in the vicinity, and contends further having received a certificate of occupancy from the building department which led to the belief of being entitled to garage accommodations; and

WHEREAS, appellant had received a certificate of occupancy, permitting the use of the premises as an accessory garage and dwelling, issued by the bureau of buildings, the board deemed that it would be a hardship to compel compliance with the order of the fire commissioner.

Resolved, that the order of the fire commissioner be and

it hereby is *modified*, and the appeal be and it hereby is *granted on condition* that fire escape balconies, not less than 3 ft. by 3 ft. in area, embracing at least one window on each story, connected by vertical ladder; with drop ladder in guides from lowest balcony to yard, shall be provided on the rear of the building; that the opening between garage and boiler room shall be built up solidly with approved masonry, and that not more than one automobile of the pleasure car type shall be maintained on the premises, and that no gasoline storage equipment shall be maintained on the premises.

Dowd, Holland, Connell and Fire Chief

Kenlon 6

Negative 0

Absent: Mr. Gunnison 1

THE RESOLUTION:

(404-25-A)

WHEREAS, J. W. Ziegler, for A. T. Stewart Realty Company, owner, filed, April 15, 1925, an appeal, with the board of appeals, from an order of the superintendent of buildings, affecting premises 135-147 East 8th street, Manhattan; and

WHEREAS, the order of the superintendent of buildings, dated March 31, 1925, reads:

"You are hereby notified that the building does not conform to Section 170-i of the Building Code, in that of extending marquee along 8th Street side of building about 38 ft. so that marquee is now about 143 ft. and is more than 50 ft. long without clear distance of four feet between same.

"You are hereby directed to stop all further construction work on marquee until matter has been properly adjusted."

and

WHEREAS, the building is fireproof, 14 stories in height, 188 ft. by 327 ft., irregular in area; OCCUPIED and known as Wanamaker's Department Store; and

WHEREAS, in connection with the new addition just added at the northeast corner of 8th street and Broadway, the existing marquee along 8th street front has been extended continuously for a total distance of 147 ft. without having a clear space of not less than 4 ft. between the existing and new marquee; and

WHEREAS, the appellant claims that the building is fireproof, conforms to law in all other respects, is policed night and day; that the new additional marquee causes no hazard; he requests the board to vacate the order and permit the maintenance of marquee as constructed; and

WHEREAS, this application affects only the 39 ft. extension of an existing marquee.

Resolved, that the order of the superintendent of buildings be and it hereby is *modified*, and that the appeal be and it hereby is *granted on condition* that more than fifty (50) per cent of the window openings on the street front to each floor area shall be accessible by fire apparatus ladder direct from street grade, and that necessary permits for structural design and construction shall be obtained.

Kenlon 6

Negative 0

Absent: Mr. Gunnison 1

THE RESOLUTION:

(418-25-A)

WHEREAS, Eugene De Rosa, for B. S. Moss Premier Corporation, owner, filed, April 18, 1925, an appeal, with the board of appeals, from an order of the fire commissioner, affecting premises 1681-1685 Broadway, Borough of Manhattan; and

WHEREAS, the order of the fire commissioner, dated January 20, 1925, reads:

"1. Provide clear glass on doors of all hose cabinets, with words 'Fire Hose' painted thereon.

"Rule 34, Regulations of Board of Standards and Appeals.";

and

WHEREAS, the building is fireproof, one and two stories high, 100 ft. by 112 ft. in area; OCCUPIED as a theatre and store building; and

WHEREAS, the hose rack cabinets have been made with glass doors and with an electric light outlet in each cabinet; a copper motive has been placed in front of this glass and the words "Fire Hose" are worked out in a leaded glass design; and

WHEREAS, appellant contends that at all times during the operation of the house, the words "Fire Hose" and the hose itself are entirely in view and easily seen and that the reason for the use of this style of hose rack cabinet is entirely from a standpoint of design; and

WHEREAS, the existing glass on doors on hose cabinets do not lessen the visibility and legibility of the words "Fire Hose" thereon, the board deemed it would be a hardship to compel strict compliance with rule 34.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and that the appeal be and it hereby is *granted*, only so far as it affects the glass ornamental cover on the hose boxes, *on condition* that the title shall be maintained in red letters on a clear glass background; that the covers of the hose boxes shall be secured by manually adjustable catches; and that the installation otherwise shall comply with the rules in all respects.

569-25-BZ.

APPLICANT—John J. Dunnigan, for John V. Sheridan and Georgie McDonald Reed, owners.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a business district the erection and maintenance of a building for the use of cut stone works.

PREMISES AFFECTED—411 East 203rd street, The Bronx.

APPEARANCES—None.

ACTION OF BOARD—Chairman read request to withdraw. Application withdrawn.

THE VOTE TO WITHDRAW—

Affirmative: Chairman Walsh, Messrs. Kennedy, Dowd, Holland, Connell and Fire Chief

Kenlon 6

Negative 0

Absent: Mr. Gunnison 1

263-25-BZ.

APPLICANT—Harry Schwartz & William Lipitz, lessees.

SUBJECT—Application (re: order of superintendent of buildings) to permit the maintenance of a motor vehicle repair shop.

PREMISES AFFECTED—131 West 52nd street, Manhattan.

APPEARANCES—None.

ACTION OF BOARD—Application dismissed.

THE VOTE TO DISMISS—

Affirmative: Chairman Walsh, Messrs. Kennedy, Dowd, Holland, Connell and Fire Chief

MINUTES

Kenlon 6
Negative 0
Absent: Mr. Gunnison 1
THE RESOLUTION:
(263-25-BZ)

WHEREAS, Harry Schwartz & William Lipitz, lessees, filed, March 9, 1925, an application, for variation of the zoning resolution, affecting premises 131 West 52nd street, Manhattan; and

WHEREAS, a similar application has been acted upon by the board under Cal. No. 1118-22-BZ.

Resolved, that the application be and it hereby is *dismissed*.

AREAS FIXED. (630-25-BZ)

The Chairman presented and read a communication from David J. Stewart, requesting the board to fix the area deemed affected and within which to obtain consents for the erection and maintenance of a garage; premises 305-311 Third street, Brooklyn.

The following area was approved by the board:

Both sides of Third street from Fourth avenue to Fifth avenue; east side of Fourth avenue from Third street to Second street; also the south side of Second street from Fourth avenue to a point 250 feet east of Fourth avenue."

(695-25-BZ)

The Chairman presented and read a communication from John Caldwell Myers, requesting the board to fix

the area deemed affected and within which to obtain consents for the erection and maintenance of a garage; premises southeast corner of Roosevelt avenue and Stone street, Borough of Queens.

The following area was approved by the board:

Both sides of Roosevelt avenue from Fitting street to a point 400 feet east of proposed garage; both sides of Stone avenue from Queens boulevard to Foster avenue; both sides of Foster avenue from a point 100 feet west of Stone avenue to a point 100 feet east of Stone avenue.

(754-25-BZ)

The Chairman presented and read a communication from Robert Tappan, requesting the board to fix the area deemed affected and within which to obtain consents for the erection and maintenance of a group of 26 one-car garages for storage of pleasure motor vehicles; premises north side of Austin street, bounded by Puritan avenue and Atom place, Forest Hills, Borough of Queens.

The following area was approved by the board:

Both sides of Atom place also Puritan avenue from Austin street to Queens boulevard.

Adjourned 1:15 p. m.

WILLIAM J. O'GORMAN, *Secretary*.

BOARD OF STANDARDS AND APPEALS

REGULAR MEETING.

TUESDAY AFTERNOON, SEPTEMBER 15, 1925.

Present: Chairman Walsh, Messrs. Kennedy, Dowd, Holland, Connell, Fire Chief Kenlon, Superintendents Kleinert and Moore.

The minutes of the regular meeting of the board of standards and appeals, held on Tuesday afternoon, July 28, 1925, were approved as printed in the Bulletin, No. 29, Vol. X.

PETITIONS FOR VARIATION.

442-25-S.

PETITIONER—Ryan & McGahan, owners.

SUBJECT—Variation of labor law as cited in order of fire commissioner.

PREMISES AFFECTED—10 Ormond place, Brooklyn.

ACTION OF BOARD—Laid over to October 2, 1925, at 10 a. m.

464-25-S.

PETITIONER—Samuel Rosenblum, for Max Goldberg, owner.

SUBJECT—Variation of labor law as cited in order of fire commissioner.

PREMISES AFFECTED—45-47 Crosby street, Manhattan.

ACTION OF BOARD—Laid over to October 2, 1925, at 10 a. m.

468-25-S.

PETITIONER—Sciama, Davis & Company, Inc., for Masro Realty Corporation, owner.

SUBJECT—Variation of labor law as cited in order of fire commissioner.

PREMISES AFFECTED—40-42 West 37th street, Manhattan.

ACTION OF BOARD—Laid over to October 2, 1925, at 10 a. m.

355-25-S.

PETITIONER—George M. Wood, for Robert C. Schock, et al., owners.

SUBJECT—Variation of labor law as cited in order of fire commissioner.

PREMISES AFFECTED—514-516 West 57th street, Manhattan.

ACTION OF BOARD—Laid over to October 2, 1925, at 10 a. m.

374-25-S.

PETITIONER—James W. Burnes, for Wm. Henne Co., Inc., owner.

SUBJECT—Variation of labor law as cited in order of fire commissioner.

PREMISES AFFECTED—957-971 Kent avenue, rear, Brooklyn.

ACTION OF BOARD—Laid over to October 2, 1925, at 10 a. m.

461-25-S.

PETITIONER—Springsteen & Goldhammer for Halbaer Realty Corp., owner.

SUBJECT—Variation of labor law as cited in decision of superintendent of buildings.

PREMISES AFFECTED—251-255 West 39th street, Manhattan.

ACTION OF BOARD—Laid over to October 2, 1925, at 10 a. m.

465-25-S.

SUBJECT—Variation of labor law as cited in order of fire commissioner.

PREMISES AFFECTED—26-34 Sullivan street and 47-49 Watts street, Manhattan.

ACTION OF BOARD—Laid over to October 2, 1925, at 10 a. m.

PETITIONER—Harold L. Young, for Lazarus Levy, owner.

SUBJECT—Variation of labor law as cited in order of fire commissioner.

PREMISES AFFECTED—17-23 East Broadway, Manhattan.

ACTION OF BOARD—Laid over to October 2, 1925, at 10 a. m.

1418-24-S.

PETITIONER—Irving Finklestein, for Beno Realty Company, owner.

SUBJECT—Variation of labor law as cited in decision of superintendent of buildings.

PREMISES AFFECTED—20 East 31st street, Manhattan.

ACTION OF BOARD—Laid over to October 2, 1925, at 10 a. m.

321-25-S.

PETITIONER—William F. Doyle, for Flosan Holding Corp., lessee.

SUBJECT—Variation of labor law as cited in decision of superintendent of buildings.

PREMISES AFFECTED—232-234 West 37th street, Manhattan.

ACTION OF BOARD—Laid over to October 2, 1925, at 10 a. m.

301-25-S.

PETITIONER—Anita H. H. Morrell, owner.

SUBJECT—Variation of labor law as cited in order of fire commissioner.

PREMISES AFFECTED—207-209 East 49th street, Manhattan.

APPEARANCES—

For Petitioner: Anita H. H. Morrell.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Petition dismissed.

THE VOTE TO DISMISS—

Affirmative: Chairman Walsh, Messrs. Kennedy, Dowd, Holland, Connell, Fire Chief Kenlon, Superintendents Kleinert and Moore 8

Negative 0

Absent: Mr. Gunnison, Deputy Fire Commissioner Hannon, Superintendents Brady, Reville and McDermott 5

THE RESOLUTION:

(301-25-S)

WHEREAS, Anita H. H. Morrell, owner, filed, March 18, 1925, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in an order of the fire commissioner, affecting premises 207-209 East 49th street, Borough of Manhattan; and

WHEREAS, the order of the fire commissioner, dated January 31, 1925, reads:

"1. Enclose interior stairway at west side of building in cellar with partitions of fire resisting material. See. 271 of the Labor Law."

and

WHEREAS, this order has been reeinded of record in the fire department.

Resolved, that the appeal be and it hereby is dismissed.

434-25-S.

PETITIONER—Adolph Mertin, for V. De Luea, owner. SUBJECT—Variation of labor law as cited in order of fire commissioner.

PREMISES AFFECTED—186 Grand street and 157-161 Mulberry street, Manhattan.

APPEARANCES—

For Petitioner: Adolph Mertin.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Petition granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Kennedy, Dowd, Holland, Connell, Fire Chief Kenlon, Superintendents Kleinert and Moore 8

Negative 0

Absent: Mr. Gunnison, Deputy Fire Commissioner Hannon, Superintendents Brady, Reville and McDermott 5

THE RESOLUTION:

(434-25-S)

WHEREAS, Adolph Mertin, for V. De Luea, owner, filed, April 21, 1925, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in an order of the fire commissioner, affecting premises 186 Grand street and 157-61 Mulberry street, Borough of Manhattan; and

WHEREAS, the order of the fire commissioner, dated April 2, 1925, reads:

"1. Remove the substandard fire escape on the east side of the building or reconstruct same as per Section 274 of the Labor Law and Rule 3 of the Board of Standards and Appeals adopted May 9th, 1924.

"Among the defects noted are the following:

"Windows on course not fireproof, self-closing. No 60 degree connecting stairways.

"Plans for all structural changes should be filed in the Bureau of Buildings, as required by Chapter 503, Laws of 1916."

and

WHEREAS, the building is non-fireproof, six stories in height, 25.2 ft. by 100 ft. in area. OCCUPIED: 1st story, bank, 15 persons; 2nd story, bookbinder, 10 persons; 3rd story, vacant; 4th story, textile printing, 8 persons; 5th story, men's clothing (contractors), 35 persons; 6th story, textile printing, 8 persons; EQUIPPED with a sprinkler system and a fire alarm signal system. EXITS: An interior fireproof stairway, extending from the 1st story to roof; enclosed in brick walls with fireproof doors at openings; a standard fire escape on Grand street front of the building; a substandard fire escape on Mulberry street front of the building, extending from ground to the top story; ROOFS of adjoining buildings same level at west; and

WHEREAS, the petitioner claims the fire escapes required to be removed under Order No. 75089 are structurally strong; that they are supplemental to and, in addition to the exits required by the labor law with which this building is provided; and requests the board to permit the substandard fire escape on Mulberry street front to remain without change.

Resolved, that the board of standards and appeals does hereby make a variation from the requirements of the labor law, and that the petition be and it hereby is granted, only so far as it affects the fireproofing of the windows, on condition that the substandard fire escape shall otherwise comply with the rules of the board of standards and appeals, and granted on further condition that all exits required by the labor law shall be installed and maintained and that the occupaney of the entire building shall not exceed the legal capacity of the exits required by law.

Adjourned 3.30 p. m.

WILLIAM J. O'GORMAN, Secretary.

PUBLIC HEARING

PROPOSED AMENDMENTS TO RULES GOVERNING FIRE EXTINGUISHING APPLIANCES— SPRINKLER SYSTEMS.

[77-25-SR]

NOTICE IS HEREBY GIVEN that a public hearing will be held by the Board of Standards and Appeals on Friday, September 25, at 2 p. m., Room 1013, Municipal Building, on proposed amendments to Rules for Fire Extinguishing Appliances, Sprinkler Rules.

General Requirements. The rules contained herein cover the general details of a sprinkler equipment only. Before an equipment is installed or before a present equipment is remodeled, complete working plans should be submitted for approval to Fire Department.

These plans shall be drawn to an indicated scale; give correct address and points of compass; show sectional elevations of the building; and the essential features of the construction, viz., size, location and direction of joists, timbers or other structural members. They shall also indicate the location and size of water supplies, connecting pipes, feed mains and risers, gate, check, alarm and dry-pipe valves, as well as the location, spacing, number and type of sprinklers.

Upon approval of preliminary plans such number of sets of clean, corrected plans on cloth as the Fire Commissioner may require, not exceeding three (3), shall be filed for final approval of the Fire Commissioner. A certified copy of the approved plans shall be forwarded to the Bureau of Buildings by the Bureau of Fire Prevention. Such application and specification forms as may be prescribed by the Fire Commissioner shall accompany preliminary plans. If a standpipe (fire line) equipment is provided throughout the building, the plans shall include a note to that effect.

When entirely completed in accordance with the approved plans and as per test herein provided for, application shall be made to the Bureau of Fire Prevention for inspection of the completed installation. When the sprinkler equipment is approved the applicant will be so advised in writing by the Bureau of Fire Prevention.

All sprinkler equipments shall be installed in a thoroughly workmanlike manner.

Rule 1. Definition of Automatic Extinguisher Systems. Automatic extinguisher systems shall consist of a system of piping connected to one or more acceptable sources of water supply, or other extinguishing medium, provided with distributing devices so arranged and located as to discharge and diffuse automatically under the action of heat an effective stream or spray over every part of the interior of the building area in which a fire may start or to which it may be communicated.

Rule 2. Classification of Sprinkler Systems. For the purpose of these rules, sprinkler systems shall be classified as:

(a) Automatic Wet Pipe Systems, in which all pipes and sprinkler heads are at all times filled with water;

(b) Automatic Dry Pipe Systems, in which the pipes and sprinkler heads are filled with air, either compressed or at atmospheric pressure, and the water supply is operated by a Dry Pipe Valve as defined in Rule 27 of these Rules.

(c) Non-Automatic Systems, in which all pipes and sprinkler heads are maintained dry with a fire department connection for water supply.

Thermostatic fire alarm with direct connection to Central Office or Fire Department Headquarters shall be provided in connection with all non-automatic sprinkler systems.

Rules 3. Approved Devices. Automatic Sprinklers and accessory appliances shall include all devices approved as such by the Bureau of Standards, Washington, D. C.; by the Underwriters' Laboratories, Inc., of Chicago; by the Associated Factory Mutual Laboratories of Boston; and all devices which meet the tests prescribed by the Board of Standards and Appeals.

Rule 4. Water Supply. Approved sources of water supply shall be classified as Automatic and Auxiliary.

(a) Automatic Sources shall include the Gravity Tank, the Pressure Tank, [and] the Public Water System, and the Automatic Electric Fire Pump, installed as required under the provisions of Rule 8, hereinafter provided for.

b) Auxiliary Sources shall include the non-automatic Fire Pump and the Fire Department Connection.

Rule 5. Gravity Tank. Gravity tanks shall contain an available quantity of water sufficient to supply twenty-five per cent (25%) of the number of sprinkler heads in the average protected fire area for twenty (20) minutes, but not less than 5,000 gallons; and the bottom of the tank shall have an elevation of not less than twenty (20) feet above the highest line of sprinklers below the main roof. When the area of a pent house exceeds 2,500 sq. ft. the bottom of the tank shall be required to be not less than 20 feet above the highest line of sprinklers below the pent house roof, but where a pent house contains only pressure tanks this rule will not apply.

Where a tank capacity in excess of [25,000] 30,000 gallons is required by this rule, the amount of water to be provided in excess of [25,000] 30,000 gallons shall be specified by the Board of Standards and Appeals, except when tanks of unlimited capacities are supported on structures altogether independent of buildings.

The tank shall be filled through a fixed pipe, independent of the sprinkler piping, not less than two (2) inches in size, discharging into the top of the tank, or through a by-pass not less than two (2) inches in size around the check valve in the discharge pipe, provided the supply is of sufficient pressure to fill the tank. The water supply and connections shall be capable of supplying the tank at a rate of not less than sixty-five (65) gallons per minute.

The filling pipe shall be carried up inside a frost-proof casing and may extend through tank bottom to discharge at top of tank above full water level. The portion of pipe inside tank must be of brass or copper or other non-corrosive material.

Tanks shall not be fed through sprinkler lines.

The sprinkler and standpipe tanks may be fed from a common source of supply, either a pump or a direct service main connection, provided that there are separate feed mains from the basement or lowest story and a control valve in each feed line in a pump or engine room.

The overflow pipe shall be not less than two (2) inches in diameter for tanks up to 30,000 gallons capacity and not less than three (3) inches in diameter for larger tanks. The top of the overflow pipe shall be three (3) inches below the top of the staves in wooden tanks and one (1) inch from the top in steel tanks. The pipe may extend through the bottom of tank provided the portion inside tank is of brass or copper or other non-corrosive metal and without joints or it may extend through side of tank. For tanks over roofs overflow pipes shall terminate not more than twenty-four (24) inches above roof and shall be fitted with a 90 degree elbow.

The discharge, heating or filling pipes where exposed to the weather shall be protected from freezing by a frost-proof covering which may be of three layers of one-inch (1") hair felt interspersed with building paper well wrapped and secured and covered with canvas well painted or by frost-proof boxing as specified by the National Board of Fire Underwriters.

Easy access to top of each tank shall be provided by means of a steel gooseneck ladder substantially constructed and rigidly braced, the top of which shall not tip outward from the vertical at any point.

Tanks above roofs shall be constructed according to the requirements of the Building Code and supporting struc-

PUBLIC HEARING

res shall be approved by the Superintendent of Buildings. Tanks not enclosed and exposed to the weather shall be covered with a double roof of acceptable construction consisting of a tight flat cover of matched boards and above is a conical roof which shall be covered with an approved roofing.

Where a gravity tank may supply both sprinklers and fire hydrants it shall not be of less than 30,000 gallons capacity and located on a structure altogether independent of buildings and the bottom shall not be less than 75 feet above the ground level, and not less than 20 feet above the highest line of sprinklers below the main roof of the highest building in a group of buildings.

Rule 6. Pressure Tank. Pressure tanks shall contain sufficient water to supply twelve and one-half per cent (2½%) of the number of sprinklers in the average protected fire area for twenty (20) minutes, but not less than [5,000] 3,000 gallons of water for a wet pipe system here supplemented by an auxiliary water supply, and not less than 5,000 gallons of water for a dry-pipe system. No single tank shall have a capacity greater than 9,000 gallons. The tank shall be kept two-thirds (2/3) full of water under a pressure of seventy-five (75) pounds per square inch, and shall be so proportioned and located that a pressure of not less than fifteen (15) pounds per square inch will be available on the highest line of sprinklers below the main roof when all the water has been discharged from the tank.

[The tank shall be placed either on the roof or in the highest sprinklered story.]

A pressure tank or tanks shall not be located below the highest line of sprinklers supplied by tank or tanks.

Where [a tank] the total capacity of the pressure tank supply is in excess of [25,000] 30,000 gallons as required by this rule, the amount of water to be provided in excess of [25,000] 30,000 gallons shall be specified by the Board of Standards and Appeals.

The water shall be supplied through a fixed pipe, independent of the sprinkler piping, not less than [two] one and one-half (1½) inches in size [with a one and one-quarter (1¼) inch connection to the tank], or through a by-pass not less than [two (2)] one and one-half (1½) inches in size around the check valve in the discharge pipe provided the supply is of sufficient pressure to fill the tank. The water supply and connections shall be capable of supplying the tank at a rate of not less than sixty-five (65) gallons per minute without reducing the pressure in the tank. The tank shall have a fixed metallic horizontal line on the end opposite the glass gauge, or other acceptable device, to indicate the level of the water when the tank is two-thirds full.

The air compressor shall be of sufficient capacity to increase the air pressure at the average rate of one (1) pound in two minutes in each pressure tank.

Rule 7. Public Water System. Direct connection to the city water supply shall be capable of furnishing water at not less than fifteen (15) pounds per square inch static pressure at the highest line of sprinklers under the main roof.

Subject to the requirements of the Department of Water Supply, Gas and Electricity, the size of each connection shall be as large as that of the main riser and not less than four (4) inches, and shall have a conveniently accessible control valve fixed to it at, or near, the curb, or, when possible, still further away from the building. The control valve shall be fitted with a frost and waterproof box, not less than four (4) feet nor more than six (6) feet below the curb, with a fixed stem extending to a compartment at the level of the sidewalk. The cover shall be bolted to the casing and shall be so marked as to be quickly located and to indicate the purpose of the valve. The valve shall be of indicating pattern, operated by a special socket wrench approved by the department of water supply, gas and electricity.

Where it is impractical to install a control valve box at the curb because of a vault under the sidewalk and within 18" thereof, the control valve may be located in the water supply connection at a point not more than two (2) feet from the point of entry into a vault.

Where a water meter is required in the water supply connection to an automatic sprinkler equipment, it shall be of a type which allows free flow of water and approved by the Department of Water Supply, Gas and Electricity, or a type of fire line meter which has been specifically approved by the Fire Commissioner for use in connection with fire extinguishing equipment.

Evidence establishing the fact that water supply conditions and pressures are as may be required shall be submitted to the Fire Department.

Rule 8. Fire Pump. An automatic electric fire pump as an automatic source of water supply is one approved for such use and controlled by an approved automatic controlling device, which shall be adjusted to maintain not less than 15 pounds water pressure at the highest sprinkler below main roof and in pent houses over 2,500 sq. ft., as provided in Rule 5. And shall receive water supply only from a direct connection to the city water main.

As auxiliary sources of water supply steam or electric standard fire pumps shall receive water supply from a suction tank, a direct connection to the city water main or other approved sources capable of supplying the pump at its rated capacity for sixty (60) minutes. The rated capacity of the pump shall be not less than five hundred (500) gallons per minute, and shall be sufficient to supply twenty-five per cent (25%) of the number of sprinklers in the average protected fire area.

The pump shall be located in a room of fireproof construction, properly ventilated, lighted and drained, enclosed in eight (8) inch brick or concrete walls with approved fire doors at openings and with fireproof floor and ceiling construction. If located in the lowest story of the building, the pump shall be placed on a foundation not less than one (1) foot in height. The pump room shall be readily accessible with safe egress for the attendant.

A reliable source of energy for driving the pump shall be provided. For steam pumps, provision shall be made for sufficient steam power to operate the pumps at full rated capacity, and a steam pressure of not less than fifty (50) pounds shall be maintained at the pump at all times. Where there is more than one boiler, the pipes and valves shall be so arranged to permit the cutting out of any one boiler without interrupting the steam supply to the pump from the other boilers. The boiler room shall be cut off from the remainder of the building by fireproof floor and wall construction with approved fire doors at all openings.

Electrical energy from a public service plant shall be acceptable as a source of energy for driving electric fire pumps. When local power plants supply the energy for operating electric pumps, two motor generator units shall be provided, or one generator unit supplemented by a public service break-down switch. Local electric power plants shall be located in rooms of fireproof construction with approved fire doors at openings.

Rule 9. Sprinkler Discharge. For the purpose of computing the capacity of water supplies, standard one-half (½) inch sprinkler heads shall be assumed to have an average discharge of twenty (20) gallons per minute, and the discharge of larger heads shall be computed proportionately in the ratio of the areas of their respective orifices.

Rule 10. Fire Area. A fire area is any floor space enclosed on all sides by exterior walls or fire walls or a combination of both. The number of sprinklers in the average protected fire area shall be determined by the number of sprinklered stories in such section. In

PUBLIC HEARING

determining the required capacity of water supplies, the number of sprinklers in the average protected fire area need not include those located in low positions, such as under benches, low shelves, closets and platforms and between cars in car barns.

Rule 11. Fire Department Connection. All automatic sprinkler systems shall be provided with at least one two-way Siamese connection on each street front of the building for connection to the fire department hose. Buildings fronting on only one street shall be provided with at least two Siamese connections when the street frontage of building exceeds [one hundred and fifty (150)] two hundred (200) feet [in width].

Where buildings have frontages on more than one street there shall be a fire department connection on each street front where frontage is not continuous but in all cases where more than one fire department connection is required they shall be located as the Fire Commissioner may direct and shall not be grouped.

All Siamese hose connections hereafter installed, except those on piers or warehouses intended for fire boat use, shall be three (3) inches in size. Fire boat connections shall be three and one-half (3½) inches in size. All hose connections shall be female, with standard fire department threads.

The inlets shall be placed at least eighteen (18) inches and not more than two (2) feet above the sidewalk, in a horizontal position accessible to the fire department, and shall be provided with a four (4) inch discharge connecting with a four (4) inch pipe to the sprinkler system for three (3) inch fire department connection and with a six (6) inch discharge outlet and six (6) inch pipe for three and one-half (3½) inch fire boat connection. Each inlet shall be provided with a clapper valve machined to a true face.

Each Siamese connection shall be designated by raised letters at least one (1) inch in size, cast in the fitting in a clear and prominent manner and reading for the service designated, viz.: "Base. Spkr.," etc., as the case may be. If the entire building is sprinklered, the fitting shall be marked "Auto. Spkr."

Siamese hose connections may project through a street wall not more than twelve (12) inches beyond the building line except that where there is an angle formed by the street wall and a check piece or the base of a column, pilaster or ornamental projection, they may be so located that no part extends more than fifteen (15) inches from either side of such angle in accordance with the provisions of the Building Code.

In each fire department connection there shall be an approved straightway check valve installed in a horizontal position, unless suitably designed for vertical position, and the piping shall be arranged to drain between the check valve and the outside siamese coupling by either a ball drip having a one-half (½) inch pipe connection and one-half (½) inch orifice and a bronze ball of proper size, or by a three-quarter (¾) inch drip connection, with plugged valve attached, and when necessary arranged to drain to a sewer. A drain connection may be tapped into the body of check valve only when located in a horizontal position.

Rule 12. Automatic Sprinkler Systems. Automatic sprinkler systems shall be classified as:

(a) One Source Systems, supplied with water from any one of the automatic sources; and

(b) Two Source Systems, supplied with water from a combination of any two of the automatic sources; two pressure tanks with a total water capacity twice that required for a one source supply; direct connection to the city water supply on two different streets, so located that the closing of the controlling valve on one main will not eliminate the main on the other street; or a direct connection to the city water supply and one of the auxiliary sources provided the water supply main is at least six (6) inches in size, the main is fed both

ways and a two (2) inch test pipe at the top of the sprinkler riser shows a flowing pressure of fifteen (15) pounds per square inch between the hours of six a. m. to six p. m.

A gravity tank and pressure tank, or a gravity tank or pressure tank and one of the automatic sources or two pressure tanks having a total water capacity for a one-source supply may be considered as a two-source supply where the occupancy of the building does not conflict with Rules 38, 39 and 40 hereinafter provided for.

Rule 13. Sprinkler Spacing. Sprinkler heads and lines shall be spaced as herein provided:

Mill Construction. Under mill ceiling (smooth solid plank and timber construction, 5 to 12 foot bays) one line of sprinklers shall be placed in the center of each bay and the distance between the heads on each line shall not exceed the following:

(a) For Standard one-half (½) inch heads—

8 feet in 12 foot bays;
9 feet in 11 foot bays;
10 feet in 10 foot bays;
11 feet in 9 foot bays;
12 feet in 5 to 8 foot bays;

(b) For Conran* one (1) inch heads—
20 feet in 5 to 12 foot bays.

(c) For Conran* one and one-quarter (1¼) inch heads—
25 feet in 5 to 12 foot bays.

(d) Vaults used for the storage of nitro-cellulose products and vaults used for the storage of inflammable motion picture films shall have one standard one-half (½) inch head for each 62½ cubic feet of available storage space, or one (1) inch Conran* head for each 250 cubic feet of available storage space.

Measurements shall be taken from center to center of timbers.

Ceilings of modified mill construction having bays less than three (3) feet wide shall be treated as open joist construction and sprinkler heads and lines spaced accordingly.

Bay timbers spaced three (3) feet or more on centers, but less than five (5) feet on centers, will require special ruling by the administrative official having jurisdiction.

Joisted Construction. Under open finish joisted construction ceilings, floor, decks and roofs, the sprinkler lines shall be run at right angles to the joists and the heads "Staggered spaced" so that heads on one line will be opposite a point half way between heads on adjacent lines.

(a) For Standard one-half (½) inch heads the distance between lines of sprinklers shall not exceed ten (10) feet, and the distance between heads on each line shall not exceed eight (8) feet, the end heads on alternate lines being spaced not more than two (2) feet from wall or partition. Permission may be given by the administrative official having jurisdiction to install but one line of sprinklers, in each bay where girders project below the under side of joists and divide the ceiling into bays ten (10) to eleven and one-half (11½) feet wide from center to center of girders, and the heads shall then be spaced on each line so that the area covered by a single head does not exceed eighty (80) square feet. In all cases where such bays are over eleven and one-half (11½) feet wide, two or more lines of sprinklers shall be installed in each bay as required by the rules for spacing.

*Wherever the term "Conran head" is used in these Rules, it is to be taken as meaning either a Conran head of the type tested and approved by the Fire Department, or one that has passed similar tests by the Fire Department.

PUBLIC HEARING

Where girders and joists are flush at the bottom, heads shall be spaced according to the general rule.

(b) For Conran* one (1) inch heads the distance between adjacent lines shall not exceed twenty (20) feet and the distance between the heads on each line shall not exceed sixteen (16) feet, the end heads on alternate lines being spaced not more than four (4) feet from wall or partition. Where girders project below the under side of joists and divide the ceiling into bays not exceeding twenty (20) feet in width, measured from center to center of girders, one line shall be placed in the center of each bay. In bays exceeding twenty (20) feet in width at least two (2) lines shall be installed in each bay and in no case shall the distance between adjacent lines exceed twenty (20) feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads the distance between adjacent lines shall not exceed twenty-five (25) feet and the distance between the head on each line shall not exceed twenty (20) feet, the end head on alternate lines being spaced not more than five (5) feet from wall or partition. Where girders project below the under side of joists and divide the ceiling into bays not exceeding twenty-five (25) feet in width, measured from center to center of girders, one line shall be placed in the center of each bay. In bays exceeding twenty-five (25) feet in width at least two (2) lines shall be installed in each bay, and in no case shall the distance between adjacent lines exceed twenty-five (25) feet.

Smooth Finish, Sheathed or Plastered Ceilings. Under smooth finish, sheathed or plastered ceilings, in bays six (6) feet wide and over (measurements to be taken from center to center of timber, girder or other projection or support forming the bay), sprinkler heads and lines shall be spaced as follows:

(a) For standard one-half ($\frac{1}{2}$) inch heads—

One line of sprinklers shall be placed in the center of each bay for bays not exceeding twelve (12) feet in width, and the distance between the heads on each line shall not exceed the following:

- 8 feet in 12 foot bays;
- 9 feet in 11 foot bays;
- 10 feet in 6 to 10 foot bays.

Bays in excess of twelve (12) feet in width and less than twenty-three (23) feet in width, shall contain at least two (2) lines of sprinklers; bays twenty-three (23) feet in width or over shall have the lines therein not over ten (10) feet apart. In bays in excess of twelve (12) feet in width, not more than one hundred (100) square feet of ceiling area shall be allotted to any single head.

(b) For Conran* one (1) inch heads—

One line of sprinklers shall be placed in the center of each bay for bays not exceeding twenty (20) feet in width, and the distance between the heads on each line shall not exceed twenty (20) feet. Bays in excess of twenty (20) feet in width shall contain at least two (2) lines and in no case shall the distance between adjacent lines exceed twenty (20) feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads—

One line of sprinklers shall be placed in the center of each bay for bays not exceeding twenty-five (25) feet in width and the distance between the heads on each line shall not exceed twenty-five (25) feet. Bays in excess of twenty-five (25) feet in width shall contain at least two (2) lines and in no case shall the distance between adjacent lines exceed twenty-five (25) feet.

Fireproof Construction. The rules of slow-burning mill construction shall apply as far as practicable. The rule may be modified, however, the intent being to arrange the spacing of heads to protect the contents rather than the ceilings; but in no case shall the distance between a head on one line and a head on an adjacent line exceed the following:

(a) For standard one-half ($\frac{1}{2}$) inch heads, 12 feet.

(b) For Conran one (1) inch heads, 20 feet.

(c) For Conran one and one-quarter ($1\frac{1}{4}$) inch heads, 25 feet.

Distance From Walls. The distance from wall or partition to the first head on a sprinkler line shall not exceed one-half the allowable distance between the heads on such line. Additional heads may be required in the narrow pockets formed by bay timbers or beams and wall. Where beams, girders, columns, walls, partitions or other obstructions prevent the effective discharge of water, additional heads shall be installed to effectively sprinkle the area.

Vertical Shafts. In vertical shafts having inflammable sides, heads shall be provided within the shaft in addition to the head or heads at the tops of shafts, as follows:

(a) One standard one-half ($\frac{1}{2}$) inch head for each 200 square feet of inflammable surface.

(b) One Conran* one (1) inch head for each 400 square feet of inflammable surface.

(c) One Conran* one and one-quarter ($1\frac{1}{4}$) inch head for each 500 square feet of inflammable surface.

Such head or heads shall be installed at each floor when practicable, and always when shaft is trapped. Where practicable, heads shall be "staggered" at the alternate floor levels, particularly when only one head is installed at each floor level.

Pitched Roofs. Under a pitched roof sloping more steeply than one (1) foot in three (3) feet, heads shall be located in peak of roof, and those on either side of the peak shall be spaced according to the foregoing requirements. The distance between heads shall be measured on a line parallel with the roof. Where the roof meets the side wall or the floor line, the heads shall be placed not more than the following distance from such intersection:

(a) For standard one-half ($\frac{1}{2}$) inch heads, $3\frac{1}{2}$ feet.

(b) For Conran* one (1) inch heads, 7 feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, $8\frac{1}{2}$ feet.

Heads spaced not to exceed the following distance each way from the peak of roof, measured on a line parallel with the roof, may be used in lieu of heads located in peak of roof:

(a) For standard one-half ($\frac{1}{2}$) inch heads, $2\frac{1}{2}$ feet.

(b) For Conran* one (1) inch heads, 5 feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, $6\frac{1}{4}$ feet.

In sawtooth roof construction, the end heads on the branch line shall be spaced not to exceed the following distance from the peak of the sawtooth:

(a) For standard one-half ($\frac{1}{2}$) inch heads, $2\frac{1}{2}$ feet.

(b) For Conran* one (1) inch heads, 5 feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, $6\frac{1}{4}$ feet.

Special Locations and Variations. In special locations, such as over electric generating, power and transforming apparatus, over their controlling devices and switchboards, where water from the fire extinguishing equipment would be detrimental, the sprinkler lines and heads may be omitted at the discretion of the administrative official having jurisdiction, and when in his judgment a slight variation of this rule of spacing is desirable to effect a more efficient distribution of water for fire extinguishing purposes, the sprinkler lines and heads shall be spaced as he may direct.

Rule 14. Sprinkler Position. All sprinkler heads shall be located, wherever possible, in an upright position on top of the pipes, except that sprinkler heads on automatic wet pipe systems may be pendant on concealed piping and when construction or occupancy of a room or enclosure makes it preferable.

(a) Where standard one-half ($\frac{1}{2}$) inch heads are installed sprinkler deflectors shall be parallel to ceilings, roofs or the

PUBLIC HEARING

incline of stairs, but when installed in the peak of a pitched roof they shall be horizontal. Distance of deflectors from ceilings of mill or other smooth construction, or bottom of joists of open joist construction, shall be not less than three (3) inches nor more than ten (10) inches.

In fireproof buildings, the distance between deflectors and panel ceilings shall not exceed fifteen (15) inches.

Not less than eighteen (18) inches effective clear space shall be left below the sprinkler heads, so that they may discharge an unbroken spray blanket from sprinkler to sprinkler and sides of room when in operation. Any stock piles, racks or other obstructions interfering with such action shall not be permitted. *Sprinkler system piping shall not be used for the support of stock, clothing, etc.*

(b) Where Conran* heads are installed, the top of head shall be located the same distance below joists or ceiling as specified for deflectors in paragraph (a) of this rule; except that when heads are located under pitched roofs of piers or similar structures, they shall in general be installed in the upright position (not normal to slope of roof) and three (3) feet vertically below the underside of roof. When the administrative official having jurisdiction deems a variation of this rule advisable to obtain a more efficient distribution of water, the heads shall be located with respect to joists or ceiling, as he may direct.

Rule 15. Pipe Sizes. The number of heads on a given size pipe in one fire area in any story shall not exceed the following:

(a) For standard one-half ($\frac{1}{2}$) inch heads—

Size of Pipe	Maximum No. of Heads Allowed
$\frac{3}{4}$ inch	1 head
1 "	2 heads
$1\frac{1}{4}$ "	3 "
$1\frac{1}{2}$ "	5 "
2 "	10 "
$2\frac{1}{2}$ "	20 "
3 "	36 "
$3\frac{1}{2}$ "	55 "
4 "	80 "
5 "	140 "
6 "	200 "
7 "	300 "
8 "	420 "

(b) For Conran* one (1) inch heads—

Size of Pipe	Maximum No. of Heads Allowed
1 inch	1 head
$1\frac{1}{4}$ "	2 heads
$1\frac{1}{2}$ "	3 "
2 "	4 "
$2\frac{1}{2}$ "	6 "
3 "	9 "
4 "	18 "
5 "	34 "
6 "	51 "
7 "	75 "
8 "	105 "

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads—

Size of Pipe	Maximum No. of Heads Allowed
$1\frac{1}{4}$ inch	1 head
$1\frac{1}{2}$ "	2 heads
2 "	3 "
$2\frac{1}{2}$ "	4 "
3 "	6 "
4 "	12 "
5 "	21 "
6 "	40 "
7 "	60 "
8 "	84 "

When it is desired to use pipe of larger size than eight (8) inches in diameter, special ruling will be required by the administrative official having jurisdiction as to the permissibility of its use and the number of heads that may be fed thereby.

Where practicable, it is desirable to arrange the piping so that the number of heads on a branch line will not exceed eight.

When the piping is arranged on the "gridiron" plan, the permissible number of heads may be doubled, provided the feed main is of the size indicated in the schedule for the total number of heads.

Where feed mains supply branch lines of only two heads each, the conditions approach those of long single lines. Such feed mains shall usually be centrally supplied where there are over eight (8) or ten (10) branch lines. Branch lines up to fourteen (14) in number may be fed from end, provided a two and one-half ($2\frac{1}{2}$) inch pipe does not supply more than sixteen (16) standard one-half ($\frac{1}{2}$) inch heads, in lieu of twenty (20).

Buildings having slatted floors, or large unprotected floor openings without approved stops, shall be treated as one room with reference to the pipe sizes, and the feed main shall be of sufficient size to accommodate the number of heads called for. Larger pipe sizes than are allowed in the schedule for a given number of heads may be required wherever the construction or conditions introduce unusually long runs of feed mains or many angles. Buildings with blind attics with small unprotected openings to floor below, may be piped from the system on the ceiling of floor below, provided pipe size schedule is not overloaded on sizes three (3) inches or under.

Rule 16. Feed Mains. The size of feed mains shall not be less than the size of riser and shall be arranged to run as direct as possible from source of water supply to riser.

Feed mains for stair or other towers without approved stops between floors, when piped on independent riser, shall be of sufficient size to accommodate the total number of sprinklers in such tower.

Rule 17. Risers. There shall be one or more separate risers in each building and in each section of the building divided by fire walls. Risers shall be arranged to provide "Center Central" or "Side Central" supply to feed main. Each riser shall be of sufficient size to supply all the heads on said riser in one story, according to the schedule of pipe sizes in Rule 15.

In buildings of fireproof construction, and for the purposes of this rule, a blank wall, or one in which the openings are protected by standard fire doors, may be considered as a fire wall, if of equivalent construction.

If the conditions warrant, special permission will be granted allowing the heads in a fire section of small area to be fed from the risers in another section, provided the total number of heads in such area does not exceed the following number per floor:

(a) For standard one-half ($\frac{1}{2}$) inch heads, 48.

(b) For Conran* one (1) inch heads, 12.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, 8.

Risers shall not be located close to windows, properly protected from mechanical injury and freezing and shall be properly supported on foundations and by floor plates, clamps, couplings or hangers.

No connections, such as for sill cocks, house service or hose outlets, shall be made with a sprinkler system riser or any part thereof.

Where gravity and pressure tanks feed through a common discharge pipe or "dead riser" to the foot of a riser and an air lock is likely to develop the discharge pipe of the gravity tank shall connect with the discharge pipe, or "dead riser", forty (40) feet below the bottom of the pressure tank.

PUBLIC HEARING

Rule 18. Pipes and Fittings. All pipe shall be full-weight standard wrought iron or steel threaded pipe, well reamed and screwed up tight into fittings without reducing the waterway. Fittings shall be standard cast iron fittings, and shall be long turn pattern on feed mains and risers.

Such fittings shall be designed and guaranteed for a working pressure of 150 pounds per square inch and must be capable of withstanding a hydrostatic test pressure of 750 pounds per square inch without failure.

All pipe shall be secured to the ceiling, walls and other parts of the building with standard steel, wrought or malleable iron hangers.

Extra heavy fittings shall be employed where the normal pressure in the pipe system exceeds one hundred and fifty (150) pounds per square inch, and shall be designed for a working pressure of 250 pounds per square inch and be capable of withstanding a hydrostatic test pressure of 1,250 pounds per square inch without failure.

All underground pipe shall comply with the specifications for cast iron pipe of the American Water Works Association.

Rule 19. Protection of Pipes and Sprinklers. When exposed to moisture, sprinkler pipes and hangers shall be protected against corrosion whenever found necessary by thoroughly cleaning the pipe of all scale and grease and painting with a coat of red lead and linseed oil paint or other acceptable moisture resistive paint. When exposed to chemical fumes, the pipe and fittings shall be coated with graphite or other approved chemical resistive paint. Care shall be taken not to paint the sprinkler heads.

Supply pipes of risers in low basements or low spaces under ground floors exposed to frost, shall be properly protected by a masonry or wood enclosure, properly heated, or filled with mineral wool, sawdust or tar mixed with granulated cork, extending below bottom of pipe and through the top flooring of ground floor, or the pipe shall be protected with three alternate layers of one-inch hair felt and building paper or by other approved method. When of wood, such enclosure shall be constructed double with a layer of tar paper between the two thicknesses of wood.

Where risers, drains, heating pipes, etc., pass through cinder concrete floors or partitions, they shall be protected with a metal sleeve or be grouted with cement mortar.

Wherever sprinklers are exposed to corrosion, the heads shall be protected with an approved hermetically sealed cover, or with an approved wax coating.

Rule 20. Drainage. All sprinkler pipe and fittings shall be so installed that they can be thoroughly drained, and where practicable, all piping shall be arranged to drain at the main drips.

Drains or drip pipes shall be so arranged as not to expose any part of the sprinkler system to frost, and shall be so connected, either by check valves or other means, that they will not [overthrow] overflow domestic service or other connections to the same sewer or house drain, or if carried through the wall and exposed to the weather, they shall be fitted with hoods or down-turned elbows.

Drains, pitched not less than one-quarter ($\frac{1}{4}$) inch in ten (10) feet, shall be installed:

- At the base of the main riser;
- At each alarm valve;
- At each dry-pipe valve;
- At each gravity tank;
- At each pressure tank.

At each fire department connection;

On each floor, if independent floor control valves are used; and

At each supply main, when the water in the same cannot be removed through any of the above drains. Such drains shall be installed with controlling valves so that flowing tests may be made to determine if the water supplies or connections from yard mains to the inside of the build-

ing are in order without causing water damage or overflowing service connections to the same house drain. Any such drain shall be not less than two (2) inches in size except that drains at independent floor valves [may be one and one-quarter ($1\frac{1}{4}$) inches in size] shall be not less than 1 inch in size where floor valves are not over $2\frac{1}{2}$ inches in size and $1\frac{1}{4}$ inches where floor valves are larger, and connected to a main drain riser of not less than $1\frac{1}{2}$ inches in size. The drain at the main riser shall discharge into a cone or sight drain, or if carried through the wall and exposed to the weather, it shall be fitted with a hood or down-turned elbow.

At an alarm valve at the top of a riser in a down-fed system a drain shall not be required.

At each gravity or pressure tank erected above roof of a building there shall be a 4-inch valved drain connection so arranged as to discharge on roof of building. And where a tank is on a separate structure altogether independent of buildings drain connection to be arranged to discharge at ground level.

On automatic wet pipe systems, the horizontal branch pipes shall be pitched not less than one-quarter ($\frac{1}{4}$) inch in ten (10) feet to drain towards the sources of supply with drip valves at the low points.

On automatic dry-pipe systems, branch pipes shall be pitched at least one-half ($\frac{1}{2}$) inch in ten (10) feet.

Rule 21. Test Pipe. [On] In all wet-pipe automatic sprinkler systems a test pipe of not less than $\frac{3}{4}$ inch in diameter shall be connected directly with each [riser] system but shall be connected to a pipe of not less than $1\frac{3}{4}$ inches in diameter in upper story and arranged to discharge, through a $\frac{1}{2}$ -inch brass outlet, preferably to a point where it can readily be seen. With long runs or many angles, size of test pipe [shall] should be increased to one (1) inch or larger. Controlling valve should be located at a sufficient distance from where the test pipe passes through the wall of the building so as to reduce to a minimum the chance of freezing of water in test pipe.

In all dry-pipe automatic sprinkler systems a $\frac{3}{4}$ -inch inspector's test pipe shall be installed at the end of the most distant branch line and fitted with a $\frac{3}{4}$ -inch shut-off valve stopped with a brass plug.

Rule 22. Pressure Gauges. A four and one-half ($4\frac{1}{2}$) inch double-spring Bourdon pressure gauge shall be provided in all automatic sprinkler systems as follows:

- Above dry-pipe valves;
- Below dry-pipe valves;
- At the pressure tank;
- At the air compressor;
- Above the alarm valve;
- Below the alarm valve; and

In the connections from city water supply.

Provision may be made for taking the pressure both above and below the alarm valve and the dry-pipe valve with only one gauge at each valve.

A gauge shall not be required at an alarm valve located at the top of a riser in a down-fed system.

Gauge connections shall be taken from the supply main or riser and not from the two-inch drain or test pipe.

Gauges shall be installed in a suitable place protected from freezing and be controlled by a valve with arrangements for draining. A plugged outlet, not less than one-quarter ($\frac{1}{4}$) inch in size, shall be located between each valve and gauge for purpose of installing the inspector's gauge.

Rule 23. Valves. All valves two (2) inches in diameter and under shall be of brass or bronze, or other approved [non-corrodible] non-corrosive material. Valves over two (2) inches in diameter shall be of brass, or bronze or iron body, brass mounted, or of other approved [non-corrodible] non-corrosive material.

All sidewalk Siamese inlet valves, caps and chains shall be of galvanized cast iron or other approved [non-corrodible] non-corrosive material.

PUBLIC HEARING

All gate valves shall be solid or double wedge disc, sufficing box pattern with hand wheel, outside screw and yoke, or other approved indicator pattern.

All check valves shall be approved straight way regrinding pattern, so built that the clappers may be readily removed for repairs.

Rule 24. Water Supply Gate Valves. The piping connecting each source of water supply with the sprinkler system shall be provided with a gate valve of the outside screw and yoke type, sealed open and tagged to designate its purpose, so located as to control each source of water supply except that from fire department hose connections. All such gate valves shall be located within the building where easily visible and readily accessible and as close as possible to the supply inlet.

Rule 25. Water Supply Check Valves. The piping connecting each source of water supply with the sprinkler system, including fire department connections, shall be provided with a check valve.

On two-source systems, check valves shall have a gate valve on each side to permit repair of check without shutting off both supplies, except that where the two sources of supply consist of tanks located above the highest line of sprinklers, a gate valve need only be provided on the downstream side of each check valve.

Rule 26. Control Valves. All automatic sprinkler systems shall be provided with a main control or shutoff valve arranged to be readily accessible and sealed in the open position; except that when the sprinkler system is fed from water supplies on the roof of the building, independent and readily accessible floor control valves, sealed in the open position, may be installed.

When not more than ten (10) standard one-half ($\frac{1}{2}$) inch sprinkler heads or three (3) Conran* heads in any automatic wet pipe system are exposed to cold and subject to freezing, shutoff valves may be provided to discontinue the water supply to such heads between November 1 and April 1. A greater number of heads than specified above, located in places which cannot be properly heated, shall be controlled by an automatic dry-pipe valve.

Rule 27. Dry-Pipe Valves. A dry-pipe valve shall be taken to mean a valve automatically controlling the water supply of the sprinkler system in such a manner that under normal conditions its piping system beyond the valve is maintained dry, but in the event of fire, the valve automatically releases the water into the sprinkler system, for fire extinguishing purposes.

Dry-pipe valves shall, for the purpose of these rules, be classified as follows:

Type A, in which the valve is actuated by the release of compressed air in the sprinkler piping system, due to the opening of a sprinkler head; and

Type B, in which the valve is actuated by an approved trip under electric control of an approved automatic thermostatic fire alarm system.

Dry-pipe valves shall be located as near as practicable to the sprinkler system in an enclosed and accessible place protected from mechanical injury and freezing.

When anti-columning pipes are used, they shall be either lead lined or of brass.

Automatic wet-pipe sprinkler systems in which only twenty-five (25) per cent of the heads are required to be maintained dry for protection from freezing, shall have only such heads under dry-pipe valve control.

(a) When "Type A" valve is installed, the air pressure in sprinkler systems under such dry-pipe valve control shall not exceed forty (40) pounds per square inch, nor be permitted to fall below twenty-five (25) pounds per square inch, nor shall it be less than one-sixth ($\frac{1}{6}$) of the water pressure in any case.

The air compressor shall have a capacity of not less than eleven (11) cubic feet per minute and the air supply for the pump shall be taken, if possible, from a room containing dry air, or it shall be passed through a drying chamber containing calcium chloride, in order to avoid the introduction of moisture into the system.

The air pressure on such dry-pipe systems shall be maintained throughout the year.

Not more than the following number of heads shall be controlled by one "Type A" dry-pipe valve:

- (a) For standard one-half ($\frac{1}{2}$) inch heads400
- (b) For Conran* one (1) inch heads100
- (c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads 64

Where equipped with an approved quick-opening device the following number of heads may be controlled by one "Type A" dry-pipe valve:

- (a) For Standard one-half ($\frac{1}{2}$) inch heads800
- (b) For Conran* one (1) inch heads200
- (c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads 128

(b) When "Type B" valve is installed the actuating alarm system shall be designed to operate at a temperature lower than that required to open the sprinkler heads, and all connections between the alarm system and the dry-pipe valve shall be adequately protected against injury of any kind.

When required by the administrative official having jurisdiction, the dead end of every feed main in such dry-pipe system shall be provided with an air relief valve or vent, so constructed as to be normally open in order to permit the free escape of air from the system, but to close automatically against the escape of water.

Not more than the following number of heads shall be controlled by one "Type B" dry-pipe valve:

- (a) For Standard one-half ($\frac{1}{2}$) inch heads500
- (b) For Conran* one (1) inch heads125
- (c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads 84

Rule 28. Alarm Valve. All automatic wet pipe sprinkler systems shall be equipped with an alarm valve so constructed that a flow of water through a one-half ($\frac{1}{2}$) inch orifice will operate an electric or mechanical gong.

Dry pipe valves shall be equipped with a reliable device to give either an electrical or mechanical alarm.

Rule 29. High and Low Water and Pressure Alarm. All gravity tanks shall be equipped with a device to indicate when the water falls below or rises above the normal level in the tank, with an indicator or alarm located in the engineer's room near the pump.

All pressure tanks shall be equipped with a device to indicate when the pressure in the tank falls below seventy (70) or rises above eighty (80) pounds per square inch with an indicator or alarm located in the engineer's room [near the compressor].

Rule 30. Heating of Tanks. The water in all sprinkler tanks subject to freezing shall be protected by internally heating the water or enclosing the tank in a frost-proof house properly heated and lighted.

Rule 31. Concealed Pipe Systems. All pipe in concealed pipe systems shall be of standard full-weight wrought iron or steel, painted with two coats of protective paint, one before and one after installation. Such pipe shall be installed in ducts or be encased in cement mortar and shall be inspected prior to concealment. When installed in the concealed space between floor arches and ceiling, such pipe shall be supported by hangers and all pipe, fittings and hangers be protected with two coats of paint.

Rule 32. Preparation of Building. Floor or wall openings and other structural defects which prevent the banking up of heated air and retard the automatic action of sprinkler heads shall be provided with the necessary curtain boards and draft stops to permit specific control of the fire by the local sprinklers.

Curtain boards shall project at least three (3) inches below the lowest sprinkler.

PUBLIC HEARING

Rule 33. *Approval of Sprinkler System [Tests].* Before acceptance all automatic sprinkler systems, excluding the water supply tanks, shall be subjected after installation to a hydrostatic pressure of a test of at least fifty (50) pounds per square inch in excess of that which will be normally required and observed in the sprinkler system, such test pressure, however, never to be less than one hundred and fifty (150) pounds per square inch in any part of the system.

All pressure tanks shall be tested after erection to a test pressure of one and one-half ($1\frac{1}{2}$) times the working pressure. To prevent the possibility of serious water damage in case of a break, the pressure shall be maintained by a hand pump, the main controlling gate being meanwhile kept shut. Brine or other corrosive chemicals shall not be used for testing systems.

In automatic dry-pipe systems with "Type A" valve control, an air pressure of forty (40) pounds per square inch shall be pumped up, be held for twenty-four (24) hours, and all leaks stopped which allow a loss of pressure of over one (2) pounds per square inch for the twenty-four (24) hours.

In the case of automatic dry-pipe systems with differential "Type A" valve, the valve shall be held off its seat during the test to prevent injuring the valve.

Non-automatic systems shall be tested after installation not less than fifty (50) pounds per square inch in excess of the pressure necessary to reach the highest line of sprinklers.

All tests of installed systems shall be made by the contractor in the presence of the Fire Commissioner, or his authorized representative.

No piping, devices nor any portion of a newly constructed sprinkler system shall be covered up or permanently concealed until tested by the Bureau of Fire Prevention and approved of in writing, except piping passing through floors, walls, partitions or beams for distances equal to the thickness of such floors, walls, partitions or beams.

Rule 34. *Non-fireproof Business Buildings.* Automatic sprinklers required in non-fireproof business buildings under the provisions of Chapter 5, Article 4, Section 72, Code of Ordinances, unless otherwise specifically provided in these rules, shall consist of at least a One Source System.

Rule 35. *Dangerous or Hazardous Buildings.* Automatic sprinklers required in buildings having occupancies considered to be dangerous or hazardous by the Fire Commissioner shall consist of at least a one-source system unless otherwise specifically provided for in these rules.

Rule 36. *Factories and other Buildings.* Automatic sprinklers required in buildings under the provisions of the Code of Ordinances and the Labor Law shall consist of at least one-source system.

Rule [35] 37. *Theatre Buildings.* Automatic sprinklers required in theatre buildings under the provisions of Chapter 5, Article 25, Section 524, Code of Ordinances, shall consist of at least a One Source System.

Rule [36] 38. *Firework Storage.* Automatic sprinklers required in buildings in which fireworks are stored or sold under the provisions of Chapter 10, Article 6, Section 92, Code of Ordinances, shall consist of a Two Source System.

Rule [37] 39. *Nitro-Cellulose Products.* Automatic sprinklers as required in buildings in which nitro-cellulose products are stored under the provisions of Chapter 10, Article 19, Section 232, Code of Ordinances, shall consist of a system supplied from both approved gravity tank supply and an approved pressure tank supply, except that no change shall be required in supplies to automatic sprinkler equipments previously approved by the Fire Commissioner as two source systems, in conformity with the provisions of this rule as in force up to December 1, 1921.

In buildings wherein are stored or handled only limited quantities of nitro-cellulose products, not exceeding 500 pounds, the automatic sprinklers may consist of a two source system as provided for in Rule 12.

Rule [38] 40. *Inflammable Motion-Picture Films.* Automatic sprinklers, required in buildings in which inflammable motion-picture films are stored under the provisions of Chapter 10, Article 20, Section 241, Code of Ordinances, shall consist of a system supplied from both an approved gravity tank supply and an approved pressure tank supply except that no change shall be required in supplies to automatic sprinkler equipments previously approved by the Fire Commissioner as two source systems in conformity with the provisions of this rule as in force up to December 1st, 1921.

Rule [39] 41. *Existing Installations and Approvals.* Automatic extinguisher systems and devices heretofore approved and accepted by the authorities having jurisdiction shall not be required to conform to the provisions of these rules; and all such systems heretofore installed shall not be required to be altered to conform to these rules so long as the fire hazard due to construction and occupancy of the building is not increased or where substantial additions or extensions in height or area is made to the building when these rules shall apply if deemed advisable or necessary by the Fire Commissioner and the system after inspection is found to be in good working order.

Rule 42. *Communicating Openings.* When a building fully equipped with sprinklers communicates with another not so equipped the openings must be protected by approved fire doors on both sides of the wall, one of which must be automatic.

Rule 43. *Maintenance Inspections.* Automatic sprinkler systems shall be inspected at least once a month by the person in charge of the building, or by other competent person employed by the owner, to see that all parts of the system are in perfect working order, and the fire department connection or connections, if any, ready for immediate use by the Fire Department. A detailed record of each inspection shall be kept for examination by a representative of the Fire Department.

There shall be kept available at all times in the premises a supply of extra sprinklers, never less than six (6), to replace promptly any fused or damaged sprinklers. And there shall be one or more employees instructed in the maintenance of sprinkler system.

Rule 44. *Open Sprinklers.* When open sprinklers are required for exposure protection by the Fire Department as specified in the Building Code they shall be installed in accordance with the rules of the National Board of Fire Underwriters. Plans for such installation to be filed with the Fire Department for approval.

WARNING.

Notice is hereby given to all petitioners, appellants and applicants for relief at the hands of the Board of Standards and Appeals and of the Board of Appeals, and to all lawyers, architects and engineers representing owners or lessees in proceedings before these boards—

First, That if they do not appear in person or by representative at the hearing on their case, dismissal for lack of prosecution is likely to result.

Second, That due and ample notice of the date set for hearing is provided in the publication in this BULLETIN of the calendars of these boards, each case being set down by Calendar Number and premises under the date of the hearing.

Third, That no plea of ignorance of the date of the hearing can be entertained in view of this publication and

of the posting of the calendars on the bulletin board in the offices of the board and of the further publication of the calendars in the daily press.

Fourth, That no one is entitled to written notice of the date for the hearing in his case, and that the plea of failure to receive such notice is no excuse for neglect to appear.

Fifth, That the business of these boards is to dispose of all cases promptly, for the reason that the pendency of an appeal or petition ties the hands of the administrative official in enforcing his order; therefore, no appeal or petition will be allowed to be hung up by reason of failure of the appellant or petitioner to file necessary data, or by any other method of delay.

CONTENTS

This issue of the Bulletin contains, in the order in—
Docket.
Call of Clerk's Calendar.
The Trial Calendar.
Notices in Building Zone Cases.
Minutes of Meeting, Board of Appeals, September 22, 1925.
Minutes of Special Meeting, Board of Appeals, September 22, 1925.
Rules.
Notice of Public Hearing.
Progress Report.

DATES AND HOURS OF MEETING.

Board of Appeals, Tuesdays, at 10 a. m.
Special meetings as listed in this Calendar.
Call of Clerk's Calendar, Tuesdays, at 2 p. m.
Board of Standards and Appeals, as listed in the Calendar.
All hearings are held in Room 1013, Municipal Building, Manhattan.

HOURS FOR CONSULTATION.

10 A. M. to 1 P. M.

Any person desiring to consult the chairman or the engineers, pertaining to the work of either board, will be seen only between the hours of ten in the morning and one in the afternoon—Saturdays excepted.

CALL OF CLERK'S CALENDAR.

The Clerk's Calendar consists of applications under the Building Zone Resolution, and its object is to give interested property owners opportunity to file objections, if any, and will be called in Room 1013, Tuesday, September 29, 1925, at 2 o'clock. At this call each case is set for hearing on a definite day.

The next subsequent Call of the Calendar will be on Tuesday, October 6, 1925, at 2 o'clock.

The Clerk's Calendar is not to be confused with the calendar of cases that have been definitely set for hearing on fixed days.

NOTICE TO APPELLANTS AND PETITIONERS.

No appeal, application or petition will be entertained in connection with which court proceedings are pending or in progress, nor accepted that are not filed within twenty days from the date of the action of the Administrative Official.

Any communication purporting to be an appeal, application or petition shall be regarded as a mere notice of intention to seek relief until it is filed on the form required by the rules of this board.

Upon receipt of any such communication the writer will be supplied with the official forms for presenting his appeal, application or petition, and if he fails to supply the data required thereon, within twenty days, his case may be dismissed for lack of prosecution.

At the time of filing an application, the appellant or petitioner shall forward a signed notice of appeal addressed to the administrative official (either superintendent of buildings or fire commissioner) and file with this board a duplicate of said notice.

Petitioners are advised that their plans must indicate the points of the compass so as to establish the true location and position of the property, the subject of the appeal.

Appeals, applications and petitions will be simplified and expedited by conforming to these directions.

WILLIAM E. WALSH, Chairman.

CALL OF CLERK'S CALENDAR.

Tuesday, September 29, 1925, at 2 p. m.

Building Zone Cases.

- 518-25-BZ.
APPLICANT—Mary J. Cheeseman, owner.
PREMISES—110 West 82nd street, Manhattan.
TO PERMIT in a residence district the maintenance of a business use (hairdressing), contrary to section 3 of the building zone resolution.
- 661-25-BZ.
APPLICANT—George Kindermann, for Manderkin Building Co., owner.
PREMISES—1362-1366 Webster avenue, The Bronx.
TO PERMIT in a business and also a "B" area district the omission of a rear yard, as required by the building zone resolution.
- 863-25-BZ.
APPLICANT—Francis L. Archer, for Empire Investors Corporation, owner.
PREMISES—660 Fifth avenue, Manhattan.
TO PERMIT in a residence district extending from a business district the erection and maintenance of a business building.
- 754-25-BZ.
APPLICANT—Robert Tappan, for Cord Meyer Development Co., owner.
PREMISES—North side of Austin street, bounded by Puritan avenue and Atom place, Forest Hills, Queens.
TO PERMIT in a residence district the erection and maintenance of a group of 26 one-car attached garages for the storage of pleasure motor vehicles as an accessory to private dwellings located within the same block.

BOARD OF APPEALS.

Tuesday, September 29, 1925, at 10 a. m.

Appeals from Administrative Orders.

- 318-25-A—East side of Newtown Creek, 586.63 feet north of Grand street, Maspeth, Queens.
- 445-25-A—104-106 West 49th street, Manhattan.
- 483-25-A—Southwest corner of University avenue and West 181st street, The Bronx.
- 517-25-A—286-304 Furman street, Brooklyn.
- 554-25-A—83-101 North Third street and 209-219 Wythe avenue, Brooklyn.
- 556-25-A—51 Henry street, Winfield, L. I., Queens.
- 564-25-A—106-110 Seventh avenue, Manhattan.
- 150-25-A—15-19 Amsterdam avenue, Manhattan.
- 764-25-A—158-166 West 50th street and 753-759 Seventh avenue, Manhattan.
- 336-25-A—46 Old Broadway, Manhattan.

Under the Building Zone Resolution.

NOTICE IS HEREBY GIVEN by the board of appeals of a public hearing under the provisions of the building zone resolution, *Tuesday morning, September 29, 1925, at 10 o'clock*, in Room 1013, Municipal Building, on the following matters:

- CAL. NO. 85-25-BZ—Application, January 21, 1925, under the building zone resolution, of William F. Doyle, applicant, on behalf of Michael T. Watts, lessee, to permit partly in a business district and partly in a residence district the maintenance of

CALENDAR

an open garage parking space for the storage of more than five (5) motor vehicles; premises 332 West 57th street, Manhattan.

NO. 298-25-BZ—Application, March 18, 1925, under the building zone resolution, of William F. Doyle, applicant, on behalf of William Drosihn, Jr., owner, to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles; premises 234-238 East 85th street, Manhattan.

NO. 1091-24-BZ—Application, September 2, 1924, under the building zone resolution, of John W. Clancy, applicant, on behalf of Valballe Corporation, owner, to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles; premises 341 East 184th street, northwest corner of Marion avenue, The Bronx.

NO. 402-25-BZ—Application, April 14, 1925, under the building zone resolution, of William F. Doyle, applicant, on behalf of Emma A. Justice, owner, to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles; premises southeast corner of East 182nd street and Folin street, The Bronx.

NO. 626-25-BZ—Application, June 17, 1925, under the building zone resolution, of New York Telephone Company, applicant and owner, to permit in a residence use, C and E area district, the extension in height and area of an existing central telephone exchange building; premises 1421-1437 Ocean avenue and 1060-1068 Kenmore place, Brooklyn.

NO. 429-25-BZ—Application, April 21, 1925, under the building zone resolution, of Samuel Gardstein, architect, on behalf of Isabelle Weber, owner, to permit in a residence district extending from a business district the erection and maintenance of a residence building to be used for store purposes on the first story; premises 2374-2376 60th street, Brooklyn.

NO. 505-25-BZ—Application, May 13, 1925, under the building zone resolution, of William F. Doyle, applicant, on behalf of Walton Whyte Realty Corp., owner, to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles; premises east side of Jerome avenue, 350 ft. south of East 181st street, The Bronx.

NO. 551-25-BZ—Application, May 27, 1925, under the building zone resolution, of Alfred H. Eccles, architect, on behalf of Henry Hellenek, owner, to permit in a business district and also within 200 ft. of a school, the erection and maintenance of a garage for the storage of more than five (5) motor vehicles; premises south side of Patterson avenue, 50 ft. west of Ely avenue, Astoria, Borough of Queens.

CAL. NO. 1534-24-BZ—Application, December 30, 1924, under the building zone resolution, of William J. Conway, architect, on behalf of John Muldoon, owner, to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles; premises 64-68 West 9th street, Brooklyn.

CAL. NO. 87-25-BZ—Application, January 21, 1925, under the building zone resolution, of David L. Malbin, applicant, on behalf of Pasquale Sabbarese, owner, to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles; premises 617-633 Brooklyn avenue, Brooklyn.

CAL. NO. 306-25-BZ—Application, March 19, 1925, under the building zone resolution, of William Farrell, architect, Emil E. Gabler, owner, Casanova Nash Sales Corp., lessee, to permit in a business district the use and occupancy of a new building as a garage for the storage of more than five (5) motor vehicles; premises 700 Southern boulevard, northeast corner of Leggett avenue, The Bronx.

CAL. NO. 343-25-BZ—Application, March 30, 1925, under the building zone resolution, of Benjamin Bag, applicant, on behalf of Bay Ridge Building Materials Corporation, owner, to permit in a residence district the maintenance of a building material storage yard; premises 244 69th street, Brooklyn.

CAL. NO. 1003-24-BZ—Application, August 5, 1924, under the building zone resolution, of David Falconer, applicant and owner, to permit in a business district the alteration and extension of a garage for the storage of more than five (5) motor vehicles; premises 185 Jamaica avenue, Long Island City, Borough of Queens.

CAL. NO. 586-25-BZ—Application, June 8, 1925, under the building zone resolution, of Harrison G. Wiseman, Magnuson and Kleinert, applicants, Louis N. Jaffe, owner, Maurice Schwartz, lessee, to permit in a residence district extending from a business district the erection and maintenance of a building for store and theatre purposes; premises 181-189 Second avenue and 240-242 East 12th street, Manhattan.

CAL. NO. 405-25-BZ—Application, April 15, 1925, under the building zone resolution, of Magnuson & Kleinert, architects, for the 15th Street Amusement Company, owner, to permit in a residence district the erection and maintenance of a building to be used for theatre and store purposes; premises 187-8-9 Prospect Park West, southwest corner of 14th street, Brooklyn.

CAL. NO. 486-25-BZ—Application, May 8, 1925, under the building zone resolution, of Louis A. Sheinart, architect, on behalf of Estate of George Friedland, owner, to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles; premises 113-117 Chrystie street, Manhattan.

CALENDAR

CAL. NO. 455-25-BZ—Application, April 29, 1925, under the building zone resolution, of Edward P. Doyle, applicant, on behalf of Gould Mersereau Company, owner, to permit in a business district the erection of a building and the use of more than 25 per cent of its total floor space for factory purposes; premises east side of Nott avenue, 90 ft. east of Van Alst avenue, Long Island City, Borough of Queens.

CAL. NO. 553-25-BZ—Application, May 27, 1925, under the building zone resolution, of South Ozone Park Operating Co., Inc., applicant and owner, to permit in a residence district extending from a business district the erection and maintenance of a theatre building; premises northwest corner of Zuider avenue and Nebraska avenue, South Ozone Park, Borough of Queens.

WILLIAM E. WALSH, *Chairman.*

Negative 0
Absent: Mr. Kennedy 1

THE RESOLUTION:

(1486-24-A)

WHEREAS, McCooey & Conroy, for Sivan Building Co., Inc., owner, filed, December 18, 1924, an appeal, with the board of appeals, from a decision of the fire commissioner, affecting premises southwest corner of Cypress avenue and Center street, Ridgewood, Borough of Queens, New York City; and

WHEREAS, the decision of the fire commissioner reads:

"5. Building being over 20,000 sq. ft., a gravity tank, etc., as per rules of the Board of Standards and Appeals must be provided.";

and

WHEREAS, the building is non-fireproof, one story in height, having a frontage of 158 ft. on Center street and a frontage of 129 ft. on Cypress avenue (an approximate area of 20,152 sq. ft.); and

WHEREAS, appellant contends that the building is low in height; that the area is but slightly in excess of 20,000 sq. ft. and that there is installed in the premises a standpipe system connected in each street with the city main.

Resolved, that the decision of the fire commissioner be and it hereby is modified, and the appeal be and it hereby is granted, omitting the installation of gravity tank, on condition that the standpipe system shall be fed both ways on two streets with not less than 4 in. connection to each city main.

378-25-A.

APPELLANT—Thomas W. Golding, for Neivel Realty Corp., owner.

SUBJECT—Appeal from order of fire commissioner.
PREMISES AFFECTED—West side of Van Alst avenue, 115 feet south of South Jane street, L. I. C., Borough of Queens.

APPEARANCES—

For Appellant: Thomas W. Golding.
For Administration: Inspector Lynch of fire department.

ACTION OF BOARD—Appeal granted on condition.
CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Dowd, Gunnison, Connell, Holland and Fire Chief Kenlon 6
Negative 0
Absent: Mr. Kennedy 1

THE RESOLUTION:

(378-25-A)

WHEREAS, Thomas W. Golding, for Selden Sales and Service Company, lessee, filed, April 8, 1925, an appeal, with the board of appeals, from an order of the fire commissioner, affecting premises west side of Van Alst avenue, 115 ft. south of South Jane street, Long Island City, Borough of Queens; and

WHEREAS, the order of the fire commissioner reads:

"5. Install a four inch stand pipe system tested to withstand a pressure of 300 pounds per sq. inch in accordance with the requirements of sec. 581, Ch. 5, C. of O.";

and

WHEREAS, the building is non-fireproof, one story in height, having a frontage of 100 ft. on Van Alst avenue and 100 ft. on Marion street and a depth of 190 ft. (approximately 18,500 sq. ft. in area); OCCUPIED as a storage garage and motor vehicle repair shop, twenty-five (25) persons; and

WHEREAS, the appellant contends that the building is low in height, accessible from two street fronts and is equipped with an automatic wet sprinkler system directly connected to the city main by a 6 in. line.

Resolved, that the order of the fire commissioner be and it hereby is modified, and the appeal be and it hereby is granted on condition that a standpipe system shall be installed in accordance with recommendations contained in resolution of Cal. No. 179-20-S of the board of standards and appeals.

BUILDING ZONE CASES.

Negative 0
Absent: Mr. Kennedy 1

THE RESOLUTION:

(1455-24-BZ)

WHEREAS, Samuel Rosenblum, for Edlar Realty Corp., owner, filed, December 9, 1924, an application, under the building zone resolution, to permit in a business district the maintenance of a motor vehicle repair shop; premises 34 Tiemann place, south side, 82 ft. east of Broadway, Manhattan; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its regular meeting, September 22, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Tiemann place is in the residence and unrestricted district; Broadway is in the business and unrestricted district and West 125th street is in the unrestricted district; and

WHEREAS, the decision of the superintendent of buildings, rendered November 19, 1924, reads:

"With reference to application submitted by you for Certificate of Occupancy for above premises, we beg to state that a motor vehicle repair shop is prohibited in a business district by the Zoning Resolution. A Certificate of Occupancy, therefore, cannot be granted for this reason."

and

WHEREAS, the existing building is of non-fireproof construction, one story in height, with a frontage of 18 ft. and a depth of 51 ft.; to be occupied as a motor vehicle repair shop; and

WHEREAS, applicant has been carrying on the business requested in this application under a temporary permit and the board deemed it would be a hardship to deprive him of the restricted business use he now possesses.

Resolved, that the board of appeals does hereby *make a variation* in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is *granted*, restricting the structure to a size not exceeding 18 ft. by 51 ft., one story in height, and the use to incidental motor vehicle repairs and adjustments, on condition that there be no gasoline storage equipment maintained on the premises and that there be no motor-driven machinery other than a portable one-half horsepower drill or punch.

262-25-BZ.

APPLICANT—Max H. Newman, for Irene Thatcher, owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a residence district extending from a business district the erection and maintenance of a building to be used for store purposes.

PREMISES AFFECTED—1406-1414 Elm avenue, Brooklyn.

APPEARANCES—

For Applicant: Max H. Newman.

For Opposition: F. W. Lahey, Wm. H. Benjes, Poul DeCeck and others.

ACTION OF BOARD—Application denied.

THE VOTE TO GRANT—

Affirmative 0
Negative: Chairman Walsh, Messrs. Dowd, Gunnison, Holland, Connell and Fire Chief Kenlon 6
Absent: Mr. Kennedy 1

THE RESOLUTION:

(262-25-BZ)

WHEREAS, Max H. Newman, for Irene Thatcher, owner, filed, March 9, 1925, an application, under the building zone resolution, to permit in a residence district, extending from a business district, the erection and maintenance of a building to be used for store purposes; premises 1406-1414 Elm avenue, Brooklyn; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its regular meeting, September 22, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Elm avenue is in both a business and residence district; that East 14th street is in a residence district, and that East 15th street is in a residence district; and

WHEREAS, the decision of the superintendent of buildings, rendered January 29, 1925, reads:

"Proposition contrary to Zone Resolution, Art. 2, Sec. 3, Store in a residential district. This applies to the portion of the lot 100 ft. or more from Avenue M, as Elm Avenue does not appear on the Use District Map.

"The application of the use district designation to the Southern side of Elm Avenue must be determined by the Board of Appeals after public hearing as per Art. 5, Sec. 21, of the Zone Resolution."

and

WHEREAS, the proposed building is to be of non-fireproof construction, one story in height, with a frontage of 100 ft. 1 in. and a depth of 60 ft., to be occupied for store purposes; and

WHEREAS, there was vigorous opposition to the granting of this application on the part of affected property owners and there were no facts adduced from the evidence in the opinion of the board to substantiate the appeal under hardship.

Resolved, that the decision of the superintendent of buildings be and it hereby is *affirmed*, and the application be and it hereby is *denied*.

389-25-BZ.

APPLICANT—William F. Doyle, for Patrick Tague, owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit partly in a residence district and partly in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles.

PREMISES AFFECTED—136-140 Hall street, Brooklyn.

APPEARANCES—

For Applicant: William F. Doyle.

For Opposition: F. M. McGoldrick.

ACTION OF BOARD—Application granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Dowd, Holland, Connell and Fire Chief Kenlon .. 5
Negative: Mr. Gunnison 1
Absent: Mr. Kennedy 1

THE RESOLUTION:

(389-25-BZ)

WHEREAS, William F. Doyle, for Patrick Tague, owner, filed, April 11, 1925, an application, under the building zone resolution, to permit in a residence district and partly in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles; premises 136-140 Hall street, Brooklyn; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its regular meeting, September 22, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Hall street is in the residence district and Myrtle avenue is in the business district; and

WHEREAS, the decision of the superintendent of buildings, rendered April 6, 1925, reads:

"Proposition contrary to the zone resolution, Art. 2, Sec. 3 & 4. The erection of a public garage for more than five motor vehicles, partly in a business and partly in a residential district."

and

MINUTES

WHEREAS, the proposed building is to be of non-fireproof construction, one story in height, with a frontage of 60 ft. and a depth of 100 ft.; to be occupied as a garage for the storage of more than five (5) motor vehicles; and

WHEREAS, the applicant has substantiated his basis of appeal under section 7-g of the zoning resolution by filing 86 per cent of consents, and the board deemed it would be a hardship to deny the requested variation.

Resolved, that the board of appeals does hereby make a variation in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is *granted on condition* that the structure be limited in height to one story above grade; that the rear and gable walls shall be unpierced throughout their entire height and length; that any gasoline storage equipment installed shall be located at the extreme southerly end at the street front of the building; that the front elevation, other than the plate glass show windows, shall be finished in face brick with architectural terra cotta or stone trimmings; and that all permits necessary for the prosecution of the work shall be obtained within nine months and the building completed within eighteen months from the date of this action.

474-25-BZ.

APPLICANT—John De Hart, for Mary A. Dalton, owner.
SUBJECT—Application (re: decision of superintendent of buildings) to permit partly in a business district and partly in a residence district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles.

PREMISES AFFECTED—1145-1149 Ogden avenue, The Bronx.

THE VOTE TO GRANT—

Affirmative	0
Negative: Chairman Walsh, Messrs. Dowd, Gunnison, Holland, Connell and Fire Chief Kenlon	6
Absent: Mr. Kennedy	1

THE RESOLUTION:

(474-25-BZ)

WHEREAS, John De Hart, for Mary A. Dalton, owner, filed, May 6, 1925, an application, under the building zone resolution, to permit partly in a business district and partly in a residence district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles; premises 1145-49 Ogden avenue, west side, 300 ft. north of 166th street, The Bronx; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its regular meeting, September 22, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Ogden avenue is in a business district; that University avenue is in a residence district, and that West 167th street is in a business district; and

WHEREAS, the decision of the superintendent of buildings, rendered May 2, 1925, reads:

"Erection of proposed garage for storage of more than five motor vehicles in a business district extending into residence district is contrary to provisions of Building Zone Resolution.";

and

WHEREAS, the proposed building is to be of non-fireproof construction, one story in height, with a frontage of 75 ft. and a depth of 239.20 ft.; to be occupied as a garage for the storage of more than five (5) motor vehicles; and

WHEREAS, the board deemed that applicant has not substantiated his basis of appeal and that denial of this application will not work any undue hardship, and there was vigorous opposition on the part of affected property owners.

Resolved, that the decision of the superintendent of buildings be and it hereby is *affirmed*, and that the application be and it hereby is *denied*.

314-25-BZ.

APPLICANT—John De Hart, for Estate of Frederick Fischer, owner.

MINUTES

THE VOTE—

Affirmative: Chairman Walsh, Messrs. Gunnison, Holland, Connell and Fire Chief Kenlon 5
Negative: Mr. Dowd 1
Absent: Mr. Kennedy 1

THE RESOLUTION:

(490-25-BZ)

WHEREAS, Philip J. Bendish, owner, filed, May 11, 1925, an application, under the building zone resolution, to permit in a residence district the alteration and extension of an existing garage for the storage of more than five (5) motor vehicles; premises 342 West 70th street, Manhattan; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its regular meeting, September 22, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that West 70th street is a residence district; West 69th street is in the unrestricted district and the railroad right of way is in the unrestricted district; and

WHEREAS, the decision of the superintendent of buildings, rendered April 13, 1925, reads:

"Extension of this building for garage purposes is unlawful. Building Zone Resolution, Art. 2 & 6. A Certificate of Occupancy must be obtained.";

and

WHEREAS, the existing building is of non-fireproof construction, two stories in height, with a frontage of 20 ft. and a depth of 90.5 ft.; to be occupied as a garage for the storage of more than five (5) motor vehicles; it is proposed to extend the building at the front 9 ft. 10 in. to the building line and continue the present use as a garage; and

WHEREAS, the board deemed it would be a hardship, in view of the existing use of the premises, and the fact that adjoining buildings extend to the building line, to refuse permission for this applicant to extend his building also to the building line.

Resolved, that the board of appeals does hereby *make a variation* in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is *granted on condition* that the building be not increased in height; that the front elevation shall be finished in face brick and that the front or street wall shall not extend beyond the face of adjoining premises to the east and west; that all permits necessary for the prosecution of the work shall be obtained within ninety days and the work completed within six months from the date of this action.

414-20-BZ.

APPLICANT—I. R. Ashley.

SUBJECT—Application for reopening (re: decision of superintendent of buildings) to permit on a plot of ground in a residence district the erection and maintenance, for a temporary period of two years, of 80 individual garages, to be rented to persons not residing on the premises.

PREMISES AFFECTED—Southwest corner of 186th street and Laurel Hill terrace, block 2149, lots 84, 86 and 87, Manhattan.

APPEARANCES—

For Applicant: E. L. Booth.

For Opposition: None.

ACTION OF BOARD—Application and permit extended for one year, for lesser use, on same conditions.

CONDITIONS—As specified in resolution.

THE VOTE TO REOPEN AND EXTEND PERMIT ONE YEAR—

Affirmative: Chairman Walsh, Messrs. Dowd, Holland, Connell and Fire Chief Kenlon .. 5
Negative 0
Absent: Messrs. Kennedy and Gunnison 2

THE RESOLUTION:

(414-20-BZ)

WHEREAS, Ashley and Booth, for Mark Ash, owner, filed, June 24, 1920, an application, under the building zone resolution, to permit in a residence district the erection and maintenance for a temporary period of two years, of 80 individual garages, to be rented to persons not residing on premises; premises southwest corner 186th street and Laurel Hill terrace, block 2149, lots 84, 86 and 87, Manhattan; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its special meeting July 20, 1920, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Laurel Hill terrace and West 186th street are business districts; and

WHEREAS, the decision of the superintendent of buildings, rendered May 26, 1920, in acting on N. B. 177-20, reads:

"1. The erection of the proposed garages in a residence district is unlawful, section 3, building zone resolution.";

and

WHEREAS, each of the proposed buildings is to be of metal construction, one story in height, with a frontage of 10 ft. and a depth of 18 ft. It is proposed to erect 80 of the buildings and to rent them to persons not residing on the premises; and

WHEREAS, the premises is located in an undeveloped section; and

WHEREAS, the application was granted July 20, 1920, for a temporary period and the period extended July 11, 1922, and July 15, 1924, and applicant requested a further extension of time.

Resolved, that the board of appeals does hereby *make a variation* in the application of the use district regulations of the building zone resolution and that the application be and it hereby is *granted for a temporary period of one year from the date of this action*, limited to 80 single car garages, on block 2149, lot 84.

AREAS FIXED.

(504-25-BZ)

The chairman presented and read a communication from William F. Doyle, requesting the board to fix the area deemed affected and within which to obtain consents for the erection and maintenance of a garage; premises 128-144 East 98th street, Brooklyn.

The following area was approved by the board:

Both sides of East 98th street from Rutland road to a point 400 ft. south of the proposed garage; both sides of Blake avenue from East 98th street to a point 200 ft. east of East 98th street; the southerly side of Ralph avenue from East 98th street to a point 100 ft. east of East 98th street; the north side of Winthrop street from East 98th street to Rockaway parkway; the east side of Rockaway parkway from Winthrop street to a point 300 ft. northerly therefrom.

(651-25-BZ)

The chairman presented and read a communication from John M. Baker, requesting the board to fix the area deemed affected and within which to obtain consents for the erection and maintenance of a garage; premises north side of Rockaway boulevard, 78 ft. west of 90th street, Woodhaven, Queens.

The following area was approved by the board:

Both sides of Rockaway boulevard, from 101st avenue to a point 100 ft. east of 90th street; both sides of 90th street from 101st avenue to 102nd road; the southerly side of 101st avenue from 89th street to 90th street; 89th street from 101st avenue to a point 100 ft. south of 102nd avenue, and both sides of 102nd avenue from 89th street to a point 100 ft. westerly therefrom.

MINUTES

(666-25-BZ)

The chairman presented and read a communication from Chas. Kreymborg & Son, requesting the board to fix the area deemed affected and within which to obtain consents for the erection and maintenance of a garage; premises east side Jerome avenue, 165.02 ft. north of East 174th street, The Bronx.

The following area was approved by the board:

Both sides of Jerome avenue, from a point 100 ft. south of East 174th street, to a point 200 ft. north of Clifford place, and also the property at the rear and for a distance of 50 ft. on each side of the property lines of the premises in question.

(760-25-BZ)

The chairman presented and read a communication from Philip S. Goldrich, requesting the board to fix the area of notification deemed affected to permit the alteration of a stable and warehouse to a public garage; premises 205-207 East 101st street, Manhattan.

The following area was approved by the board:

Both sides of 101st street from Second avenue to a point 100 ft. west of Third avenue; east side of Third avenue, from 101st street to 102nd street; the south side of 102nd street from Third avenue to a point 210 ft. east of Third avenue.

Adjourned 4 p. m.

WILLIAM J. O'GORMAN, *Secretary*.

BOARD OF APPEALS

SPECIAL MEETING.

TUESDAY AFTERNOON, SEPTEMBER 22, 1925.

Present: Chairman Walsh, Messrs. Dowd, Gunnison, Holland, Connell and Fire Chief Kenlon.

APPEALS FROM ADMINISTRATIVE ORDERS.
904-24-A.

APPELLANT—Eastman Kodak Co., Owner.

SUBJECT—Appeal from order of fire commissioner.

PREMISES AFFECTED—235-239 West 23rd street, Manhattan.

APPEARANCES—

For Appellant: Murray Hulbert.

For Administration: Inspector Lynch of fire department.

ACTION OF BOARD—Appeal granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs.

Dowd, Gunnison, Connell, Holland and

Fire Chief Kenlon 6

Negative 0

Absent: Mr. Kennedy 1

THE RESOLUTION:

(904-24-A)

WHEREAS, Hubbell, Taylor, Goodwin & Moser, for Eastman Kodak Company, owner, filed, July 9, 1924, an appeal, with the board of appeals, from an order of the fire commissioner, affecting premises 235-239 West 23rd street, Manhattan; and

WHEREAS, the order of the fire commissioner, dated June 18, 1924, reads:

"Order No. 24567-LC:

"1. Provide a sufficient number of fireproof vaults in which to keep all nitro-cellulose material, including photographic film. No vault may exceed 1,500 cubic feet interior volume. No vault may be used for the storage of more than 10,000 pounds of nitro-cellulose material. Said vaults must be constructed, located, ventilated and protected with sprinklers as required by Section 232-3, Chapter 10, Code of Ordinances.

"2. Replace present 2,500 gallon pressure tanks with tanks of at least 5,000 gallons of water capacity in accordance with Rule 6 of the Sprinkler Rules of the Board of Standards and Appeals.";

and

WHEREAS, the building is fireproof, eight stories in height, 60 ft. by 98 ft. 8 in. in area; OCCUPIED on the 1st, 2nd and 7th stories for the storage of nitro-cellulose films and on the remaining stories as a tenant factory, 3,242 pounds of films stored on the 1st story, 3,000 pounds on the 2nd story and 1,200 pounds on the 7th story, 149 persons above the 1st story; and

WHEREAS, appellant contends that 90 per cent of the

stock is received and kept in wooden shipping cases which enclose the cartons containing the photo films, and contends that the films, wrapped and packed as indicated, do not require storage in ventilated vaults, and further contends that, relative to Item 2 of the orders, that the sprinkler system is provided with two sources of supply; two 15,000 gal. gravity tanks (located 20 ft. above the highest line of sprinklers) and two 2,500 gal. pressure tanks; that the building has 700 sprinklers (an average of 78 per average fire area), and that the existing water supply for the sprinkler system is adequate.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted* as to Item No. 1 *on condition* that the stock shall be confined to the 8th story, stored in a finished stock store room, and that the stock so maintained shall be kept in the original packages, this room to be ventilated to the outer air with not less than two (2) skylights, glazed with plain glass, and that a two source sprinkler system shall be maintained at all times; *granted* as to Item No. 2 *on condition* that the existing gravity and pressure tanks be maintained in accordance with the rules of the board of standards and appeals.

1177-24-A.

APPELLANT—Street & Smith Corporation, owner.

SUBJECT—Appeal from order of fire commissioner.

PREMISES AFFECTED—79-89 Seventh avenue, Manhattan.

APPEARANCES—

For Appellant: Murray Hulbert and Mr. Hatton.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Appeal granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Messrs.

Dowd, Gunnison, Connell, Holland and

Fire Chief Kenlon 6

Negative 0

Absent: Mr. Kennedy 1

THE RESOLUTION:

(1177-24-A)

WHEREAS, Street & Smith Corporation, owner, filed, September 29, 1924, an appeal, with the board of appeals, from an order of the fire commissioner, affecting premises 79-89 Seventh avenue, Manhattan; and

WHEREAS, the order of the fire commissioner, dated July 9, 1924, reads:

"Before your application to store and use acids, kerosene and benzine at premises 79-89 Seventh Avenue can be approved for a permit, it will be necessary to

MINUTES

show compliance with order issued against owner of building, which reads:

"1. Order No. 43426-F:

"Item 1. Provide a separate and distinct system of automatic sprinklers throughout building having at least one source of water supply, etc.";

and

WHEREAS, the building is fireproof, having a frontage of 129 ft. on Seventh avenue and a frontage of 105 ft. on 15th street; EQUIPPED with a 4 in. standpipe system in each stairway; OCCUPIED as a printing establishment, 131 persons above the 1st story; and

WHEREAS, appellant contends that the installation of a sprinkler system would work a hardship on account of the possibility of the sprinkler heads going off and putting presses and binding machines out of commission and that during the installation of a sprinkler system the plant would be out of commission owing to the dirt and grit created thereby, and contends further that there are watchmen employed on the premises.

Resolved, that the order of the fire commissioner be and it hereby is modified, and the appeal be and it hereby is granted as to Order No. 43426, Item No. 1, on condition that an approved standpipe system shall be maintained in accordance with rules of board, with 4 in. riser in each stair hall; that not less than two (2) 2½ gallon approved fire extinguishers shall be maintained on each story, and that the building shall be operated and maintained in a single use, operation and occupancy.

THE RESOLUTION:

(411-25-BZ)

WHEREAS, William F. Doyle, for B. Martin, owner, filed,
April 16, 1925, an application, under the building zone res-
olution, to permit in a residence district the maintenance
of a dance and banquet hall; premises 1134 Pacific street,
Brooklyn; and

WHEREAS, a public hearing was held on this application
by the board of appeals, at its special meeting, September
22, 1925, after due notice by publication in the Bulletin of
the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the build-
ing zone resolution show that Pacific street is residence;
Franklin avenue, business; Bedford avenue, business; and

WHEREAS, the decision of the superintendent of buildings,
rendered April 13, 1925, reads:

"Application denied—proposed use of 1st floor as a
dancing and banquet hall by which the owner may
establish a purely business use in a residential dis-
trict is contrary to art. 2, sec. 3, zoning resolution.";
and

WHEREAS, the existing building is of non-fireproof con-
struction, three stories in height, with a frontage of 54
ft. 9 in. and a depth of 102 ft. 3 in.; to be occupied as
a hotel with dance and banquet floor; and

WHEREAS, the applicant does not propose, nor seek the
privilege of a public dance hall or cabaret; and

WHEREAS, the board considers the conduct of a res-
taurant and dancing accommodations for the use of ho-
tel guests an accessory use incidental to the conduct and
operation of a hotel.

Resolved, that the board of appeals does hereby make
a variation in the application of the use district regulations
of the building zone resolution, and that the application
be and it hereby is granted on condition that all permits
required by law for the operation and conduct of a hotel
shall be obtained.

Adjourned 6.15 p. m.

WILLIAM J. O'GORMAN, Secretary.

Dowd, Gunnison, Holland, Connell and
Fire Chief Kenlon 6
Negative 0
Absent: Mr. Kennedy 1

THE RESOLUTION:

(618-24-A)

WHEREAS, A. Hayden, owner, filed, May 2, 1924, an ap-
peal, with the board of appeals, from an order of the

*Correction—Words "pending action of board of stand-
ards and appeals on petition for approval of burner" omitted
from last paragraph and words "the burner having been ap-
proved by the board of standards and appeals May 5, 1925,"
added in next to last paragraph.

fire commissioner, affecting premises 517 83rd street, Brook-
lyn; and

WHEREAS, the order of the fire commissioner, No. 88135-
LC, dated April 12, 1924, reads:

"With reference to your application for a permit to
store fuel oil at the above location, I regret to inform
you that I am without power to grant such a permit
for the reason that the storage of fuel oil at the
above location is not in accordance with the rules
adopted by the Board of Standards and Appeals on
Nov. 6, 1919, amended Jan. 18, 1924.

"You are therefore ordered to remove all fuel oil
from the storage tank and discontinue the further
storage and use of fuel oil at the above location.";

and

WHEREAS, the building is non-fireproof, two stories and
basement in height, 20 ft. by 60 ft. in area; OCCUPIED
as a dwelling; and

WHEREAS, appellant contends that the installation con-
forms with the fuel oil rules excepting in that the burner
(a Powerlight Oilheat) is not an approved burner; and

WHEREAS, this appeal was granted by the board at its
meetings, July 15, 1924, October 28, 1924, January 27, 1925,
and April 28, 1925, for a temporary period of 90 days, and
appellant requests an extension of the period, the burner
having been approved by the board of standards and ap-
peals May 5, 1925.

Resolved, that the order of the fire commissioner be
and it hereby is modified, and the appeal be and it hereby
is granted, for a temporary period of ninety days, on con-
dition that the installation complies with fuel oil rules of
the board of standards and appeals in all other respects.

THE RESOLUTION:

(656-25-A)

WHEREAS, Albert E. Kleinert, superintendent of buildings, Borough of Brooklyn, filed, April 27, 1925, an appeal, with the board of appeals, for revocation of the Certificate of Occupancy 24654/24 issued for premises 1109 45th street, Brooklyn; and

WHEREAS, it appears that an application was filed in the bureau of buildings to permit a lot located partly in a business and partly in a residence district the erection of a two-story brick business structure 20 ft. 7 in. front and rear, 60 ft. 2½ in. in depth, with a one-story brick extension at the rear 20 ft. 7 in. by 40 ft. irregular in depth, an offset 6 ft. 5 in. by 20 ft. at rear of lot shown as being part thereof but actually being a part of adjoining property; no rear yard was provided and the business use extends into the residence district; and

WHEREAS, the superintendent of buildings contends that the permit was issued in error by an examiner temporarily appointed and that the same architect filed the application for a permit on these premises and premises 4409 New Utrecht avenue also under appeal (Cal. No. 186-25-A) for revocation of certificate of occupancy.

Resolved, that the board of appeals does hereby grant appeal, revoking Certificate of Occupancy No. 24654-24, without prejudice to the owner in fee of present date, affecting any application to be made to this board for a variation of the zoning resolution.

Resolved, that the order of the fire commissioner be and it hereby is modified, and the appeal be and it hereby is granted, for a temporary period of ninety (90) days, at the owner's risk.

RULES

FIRE RETARDING RULES

Adopted by the Board of Standards and Appeals August 30, 1917; Amended November 1, 1917.

Rule 1. Fire Retarding Materials for Garages, Motor Vehicle Repair Shops and Oil Selling Stations. In garages, motor vehicle repair shops and oil selling stations any material or form of construction shall be deemed fire-retarding within the meaning of §73, subdivision 3, of the building code, that resists the action of flame and heat when subjected to a continuous fire for one hour at an average temperature of seventeen hundred (1700) degrees Fahrenheit without the passage of flame, and with a maximum temperature rise to four hundred (400) degrees Fahrenheit on the side away from the fire. The point at which the temperature of transmission is measured shall be protected from external air and weather conditions.

When the test specimen is in the form of partition construction, the area under test shall be not less than one hundred (100) square feet and least dimension shall be not less than nine (9) feet. When in the form of floor construction, the area under test shall be not less than two hundred (200) square feet and the least dimension shall be not less than fourteen (14) feet.

During the fire, the floor construction shall support the live load for which it is designed, and after the fire shall safely sustain twice the designed live load with a maximum deflection of not more than one two-hundredth (1/200) part of the span.

Rule 2. Wood Joisted Floor Construction. Wood joisted floor construction shall be accepted as fire-retarding construction in non-fireproof buildings used as garages, motor vehicle repair shops or oil selling stations when the beams are protected on the upper and under sides with the fire-retarding materials specified in these rules for floor and ceiling coverings.

Rule 3. Floor Covering. Any one of the following forms of construction shall be accepted as fire-retarding for the covering of the upper sides of wood floor beams in joisted floor construction in non-fireproof buildings used as garages, motor vehicle repair shops or oil selling stations:

(a) Seven-eighths ($\frac{7}{8}$) inch wood underflooring protected with a membrane of two-ply waterproofing covered with not less than two and one-half ($2\frac{1}{2}$) inches of 1:2½:5 concrete or better, reinforced with not less than one-fourth ($\frac{1}{4}$) of one (1) per cent of steel mesh.

(b) Two and one-half ($2\frac{1}{2}$) inches of 1:2:4 concrete applied directly to the top of the joists, with or without temporary support, reinforced with not less than one-fourth of one per cent steel rods, mesh or steel lath, and having the tops of the joists coated with approved waterproof paint or protected by tar paper on the top and on the sides for a distance of three inches from the top. (Amendment, Nov. 1, 1917.)

Rule 4. Ceiling Covering. Any one of the following forms of construction shall be accepted as fire-retarding for the covering of the undersides of wood floor beams in joisted floor construction in non-fireproof buildings used as garages, motor vehicle repair shops or oil selling stations:

(a) One-half ($\frac{1}{2}$) inch plaster boards with pointed joints covered with No. 26 U. S. gauge sheet metal with one (1) inch lapped seams nailed to the wood beams when spaced not more than sixteen (16) inches on centers, or nailed to furring strips when the floor beams are spaced more than sixteen (16) inches on centers;

(b) Two thicknesses of one-quarter ($\frac{1}{4}$) inch asbestos board laid with tight staggered joints and nailed to the beams, when spaced not more than sixteen (16) inches on centers, or nailed to furring strips when the floor beams are more than sixteen (16) inches on centers.

(c) Metal lath weighing not less than three pounds per square yard, attached to furring strips and plastered with Portland cement mortar at least three-quarters ($\frac{3}{4}$) inch thick.

Rule 5. Attachment to Ceiling. Fire-retarding ceilings in non-fireproof buildings used as garages, motor vehicle repair shops or oil selling stations shall be attached to wood floor beams and girders in such manner as to maintain an air space between the wood beams, and all wood beams shall be seasoned before applying the protective coat.

Rule 6. Openings in Fire-Retarding Floors. Pipes or conduits which pass through floors shall be fitted with metal thimbles and made watertight for a height of three (3) inches above the floor.

Rule 7. Columns. All structural posts and columns in non-fireproof buildings required to be fire-retarded shall be protected with the fire-retarding materials specified for ceiling coverings in these rules, or with any of the materials accepted in fireproof construction; except that an air space shall not be required around steel or cast iron columns.

Where necessary for protection against mechanical injury, the fire-retarding protection on columns shall be jacketed to a height of five (5) feet from the ground with No. 4 U. S. gauge metal.

Rule 8. Girders. All girders in non-fireproof buildings required to be fire-retarded shall be protected with the fire-retarding materials specified for ceiling coverings in these rules, or with any of the materials acceptable in fireproof construction; except that an air space need not be provided around steel girders.

Rule 9. Shaft Enclosures. Existing stairways and vertical shafts in non-fireproof business buildings hereafter converted to be used as garages, motor vehicle repair shops or oil selling stations shall be enclosed in fire-retarding partitions continued through the non-fireproof floor construction, and when unfilled wood stud partitions are used, the space between the floor beams shall be fire-stopped with incombustible materials. All openings in such partitions shall be protected with accepted metal-covered fire doors or windows. Wherever necessary for protection against mechanical injury, the partition shall be jacketed to a height of five (5) feet on the garage side with No. 4 U. S. gauge metal. Any one of the following forms of partitions shall be accepted for the enclosure:

(a) Two by four inch wood studs, spaced not more than sixteen (16) inches on centers, covered both sides with metal lath weighing not less than three pounds per square yard, attached to furring strips and plastered with Portland cement mortar at least three-quarters ($\frac{3}{4}$) of an inch thick;

(b) Two by four inch wood studs spaced not more than sixteen (16) inches on centers, covered both sides with seven-eighths ($\frac{7}{8}$) inch wood sheathing, one-half ($\frac{1}{2}$) inch plaster boards with pointed joints and No. 26 U. S. gauge sheet metal with one-inch lapped seams;

(c) Two by four inch wood studs spaced not more than sixteen (16) inches on centers, covered both sides with seven-eighths ($\frac{7}{8}$) inch wood sheathing, two thicknesses of one-quarter ($\frac{1}{4}$) inch asbestos boards laid with tight staggered joints and jacketed with No. 16 U. S. gauge metal on the garage side to a height of five (5) feet.

(d) Two by four inch wood studs spaced not more than sixteen (16) inches on centers, filled in solidly between the studs with four inches of approved fireproof materials and covered on both sides with No. 26 U. S. gauge metal;

(e) Existing wood stud, lath and plaster partitions covered on the garage side with No. 26 U. S. gauge sheet metal with one-inch lapped seams.

PUBLIC HEARING

PROPOSED AMENDMENTS TO RULES GOVERNING FIRE EXTINGUISHING APPLIANCES— SPRINKLER SYSTEMS.

[77-25-SR]

NOTICE IS HEREBY GIVEN that a public hearing will be held by the Board of Standards and Appeals on Friday, October 23, at 2 p. m., Room 1013, Municipal Building, on proposed amendments to Rules for Fire Extinguishing Appliances, Sprinkler Rules.

General Requirements. The rules contained herein cover the general details of a sprinkler equipment only. Before an equipment is installed or before a present equipment is remodeled, complete working plans should be submitted for approval to Fire Department.

These plans shall be drawn to an indicated scale; give correct address and points of compass; show sectional elevations of the building; and the essential features of the construction, viz., size, location and direction of joists, timbers or other structural members. They shall also indicate the location and size of water supplies, connecting pipes, feed mains and risers, gate, check, alarm and dry-pipe valves, as well as the location, spacing, number and type of sprinklers.

Upon approval of preliminary plans such number of sets of clean, corrected plans on cloth as the Fire Commissioner may require, not exceeding three (3), shall be filed for final approval of the Fire Commissioner. A certified copy of the approved plans shall be forwarded to the Bureau of Buildings by the Bureau of Fire Prevention. Such application and specification forms as may be prescribed by the Fire Commissioner shall accompany preliminary plans. If a standpipe (fire line) equipment is provided throughout the building, the plans shall include a note to that effect.

When entirely completed in accordance with the approved plans and as per test herein provided for, application shall be made to the Bureau of Fire Prevention for inspection of the completed installation. When the sprinkler equipment is approved the applicant will be so advised in writing by the Bureau of Fire Prevention.

All sprinkler equipments shall be installed in a thoroughly workmanlike manner.

Rule 1. Definition of Automatic Extinguisher Systems. Automatic extinguisher systems shall consist of a system of piping connected to one or more acceptable sources of water supply, or other extinguishing medium, provided with distributing devices so arranged and located as to discharge and diffuse automatically under the action of heat an effective stream or spray over every part of the interior of the building area in which a fire may start or to which it may be communicated.

Rule 2. Classification of Sprinkler Systems. For the purpose of these rules, sprinkler systems shall be classified as:

(a) Automatic Wet Pipe Systems, in which all pipes and sprinkler heads are at all times filled with water;

(b) Automatic Dry Pipe Systems, in which the pipes and sprinkler heads are filled with air, either compressed or at atmospheric pressure, and the water supply is operated by a Dry Pipe Valve as defined in Rule 27 of these Rules.

(c) Non-Automatic Systems, in which all pipes and sprinkler heads are maintained dry with a fire department connection for water supply.

Thermostatic fire alarm with direct connection to Central Office or Fire Department Headquarters shall be provided in connection with all non-automatic sprinkler systems.

Rule 3. Approved Devices. Automatic Sprinklers and accessory appliances shall include all devices approved as such by the Bureau of Standards, Washington, D. C.; by the Underwriters' Laboratories, Inc., of Chicago; by the Associated Factory Mutual Laboratories of Boston; and all devices which meet the tests prescribed by the Board of Standards and Appeals.

Rule 4. Water Supply. Approved sources of water supply shall be classified as Automatic and Auxiliary.

(a) Automatic Sources shall include the Gravity Tank, the Pressure Tank, [and] the Public Water System, and the Automatic Electric Fire Pump, installed as required under the provisions of Rule 8, hereinafter provided for.

b) Auxiliary Sources shall include the non-automatic Fire Pump and the Fire Department Connection.

Rule 5. Gravity Tank. Gravity tanks shall contain an available quantity of water sufficient to supply twenty-five per cent (25%) of the number of sprinkler heads in the average protected fire area for twenty (20) minutes, but not less than 5,000 gallons; and the bottom of the tank shall have an elevation of not less than twenty (20) feet above the highest line of sprinklers below the main roof. When the area of a pent house exceeds 2,500 sq. ft. the bottom of the tank shall be required to be not less than 20 feet above the highest line of sprinklers below the pent house roof but where a pent house contains only pressure tanks this rule will not apply.

Where a tank capacity in excess of [25,000] 30,000 gallons is required by this rule, the amount of water to be provided in excess of [25,000] 30,000 gallons shall be specified by the Board of Standards and Appeals, except when tanks of unlimited capacities are supported on structures altogether independent of buildings.

The tank shall be filled through a fixed pipe, independent of the sprinkler piping, not less than two (2) inches in size, discharging into the top of the tank, or through a by-pass not less than two (2) inches in size around the check valve in the discharge pipe, provided the supply is of sufficient pressure to fill the tank. The water supply and connections shall be capable of supplying the tank at a rate of not less than sixty-five (65) gallons per minute.

The filling pipe shall be carried up inside a frost-proof casing and may extend through tank bottom to discharge at top of tank above full water level. The portion of pipe inside tank must be of brass or copper or other non-corrosive material.

Tanks shall not be fed through sprinkler lines.

The sprinkler and standpipe tanks may be fed from a common source of supply, either a pump or a direct service main connection, provided that there are separate feed mains from the basement or lowest story and a control valve in each feed line in a pump or engine room.

The overflow pipe shall be not less than two (2) inches in diameter for tanks up to 30,000 gallons capacity and not less than three (3) inches in diameter for larger tanks. The top of the overflow pipe shall be three (3) inches below the top of the staves in wooden tanks and one (1) inch from the top in steel tanks. The pipe may extend through the bottom of tank provided the portion inside tank is of brass or copper or other non-corrosive metal and without joints or it may extend through side of tank. For tanks over roofs overflow pipes shall terminate not more than twenty-four (24) inches above roof and shall be fitted with a 90 degree elbow.

The discharge, heating or filling pipes where exposed to the weather shall be protected from freezing by a frost-proof covering which may be of three layers of one-inch (1") hair felt interspersed with building paper well wrapped and secured and covered with canvas well painted or by frost-proof boxing as specified by the National Board of Fire Underwriters.

Easy access to top of each tank shall be provided by means of a steel gooseneck ladder substantially constructed and rigidly braced, the top of which shall not tip outward from the vertical at any point.

Tanks above roofs shall be constructed according to the requirements of the Building Code and supporting structure.

PUBLIC HEARING

ures shall be approved by the Superintendent of Buildings. Tanks not enclosed and exposed to the weather shall be covered with a double roof of acceptable construction consisting of a tight flat cover of matched boards and above this a conical roof which shall be covered with an approved roofing.

Where a gravity tank may supply both sprinklers and yard hydrants it shall not be of less than 30,000 gallons capacity and located on a structure altogether independent of buildings and the bottom shall not be less than 75 feet above the ground level, and not less than 20 feet above the highest line of sprinklers below the main roof of the highest building in a group of buildings.

Rule 6. Pressure Tank. Pressure tanks shall contain sufficient water to supply twelve and one-half per cent (12½%) of the number of sprinklers in the average protected fire area for twenty (20) minutes, but not less than [5,000] 3,000 gallons of water for a wet pipe system where supplemented by an auxiliary water supply, and not less than 5,000 gallons of water for a dry-pipe system. No single tank shall have a capacity greater than 9,000 gallons. The tank shall be kept two-thirds (2/3) full of water under a pressure of seventy-five (75) pounds per square inch, and shall be so proportioned and located that a pressure of not less than fifteen (15) pounds per square inch will be available on the highest line of sprinklers below the main roof when all the water has been discharged from the tank.

[The tank shall be placed either on the roof or in the highest sprinklered story.]

A pressure tank or tanks shall not be located below the highest line of sprinklers supplied by tank or tanks.

Where [a tank] the total capacity of the pressure tank supply is in excess of [25,000] 30,000 gallons as required by this rule, the amount of water to be provided in excess of [25,000] 30,000 gallons shall be specified by the Board of Standards and Appeals.

The water shall be supplied through a fixed pipe, independent of the sprinkler piping, not less than [two] one and one-half (1½) inches in size [with a one and one-quarter (1¼) inch connection to the tank], or through a by-pass not less than [two (2)] one and one-half (1½) inches in size around the check valve in the discharge pipe provided the supply is of sufficient pressure to fill the tank. The water supply and connections shall be capable of supplying the tank at a rate of not less than sixty-five (65) gallons per minute without reducing the pressure in the tank. The tank shall have a fixed metallic horizontal line on the end opposite the glass gauge, or other acceptable device, to indicate the level of the water when the tank is two-thirds full.

The air compressor shall be of sufficient capacity to increase the air pressure at the average rate of one (1) pound in two minutes in each pressure tank.

Rule 7. Public Water System. Direct connection to the city water supply shall be capable of furnishing water at not less than fifteen (15) pounds per square inch static pressure at the highest line of sprinklers under the main roof.

Subject to the requirements of the Department of Water Supply, Gas and Electricity, the size of each connection shall be as large as that of the main riser and not less than four (4) inches, and shall have a conveniently accessible control valve fixed to it at, or near, the curb, or, when possible, still further away from the building. The control valve shall be fitted with a frost and waterproof box, not less than four (4) feet nor more than six (6) feet below the curb, with a fixed stem extending to a compartment at the level of the sidewalk. The cover shall be bolted to the casing and shall be so marked as to be quickly located and to indicate the purpose of the valve. The valve shall be of indicating pattern, operated by a special socket wrench approved by the department of water supply, gas and electricity.

Where it is impractical to install a control valve box at the curb because of a vault under the sidewalk and within 18" thereof, the control valve may be located in the water supply connection at a point not more than two (2) feet from the point of entry into a vault.

Where a water meter is required in the water supply connection to an automatic sprinkler equipment, it shall be of a type which allows free flow of water and approved by the Department of Water Supply, Gas and Electricity, or a type of fire line meter which has been specifically approved by the Fire Commissioner for use in connection with fire extinguishing equipment.

Evidence establishing the fact that water supply conditions and pressures are as may be required shall be submitted to the Fire Department.

Rule 8. Fire Pump. An automatic electric fire pump as an automatic source of water supply is one approved for such use and controlled by an approved automatic controlling device, which shall be adjusted to maintain not less than 15 pounds water pressure at the highest sprinkler below main roof and in pent houses over 2,500 sq. ft., as provided in Rule 5. And shall receive water supply only from a direct connection to the city water main.

As auxiliary sources of water supply steam or electric standard fire pumps shall receive water supply from a suction tank, a direct connection to the city water main or other approved sources capable of supplying the pump at its rated capacity for sixty (60) minutes. The rated capacity of the pump shall be not less than five hundred (500) gallons per minute, and shall be sufficient to supply twenty-five per cent (25%) of the number of sprinklers in the average protected fire area.

The pump shall be located in a room of fireproof construction, properly ventilated, lighted and drained, enclosed in eight (8) inch brick or concrete walls with approved fire doors at openings and with fireproof floor and ceiling construction. If located in the lowest story of the building, the pump shall be placed on a foundation not less than one (1) foot in height. The pump room shall be readily accessible with safe egress for the attendant.

A reliable source of energy for driving the pump shall be provided. For steam pumps, provision shall be made for sufficient steam power to operate the pumps at full rated capacity, and a steam pressure of not less than fifty (50) pounds shall be maintained at the pump at all times. Where there is more than one boiler, the pipes and valves shall be so arranged to permit the cutting out of any one boiler without interrupting the steam supply to the pump from the other boilers. The boiler room shall be cut off from the remainder of the building by fireproof floor and wall construction with approved fire doors at all openings.

Electrical energy from a public service plant shall be acceptable as a source of energy for driving electric fire pumps. When local power plants supply the energy for operating electric pumps, two motor generator units shall be provided, or one generator unit supplemented by a public service break-down switch. Local electric power plants shall be located in rooms of fireproof construction with approved fire doors at openings.

Rule 9. Sprinkler Discharge. For the purpose of computing the capacity of water supplies, standard one-half (½) inch sprinkler heads shall be assumed to have an average discharge of twenty (20) gallons per minute, and the discharge of larger heads shall be computed proportionately in the ratio of the areas of their respective orifices.

Rule 10. Fire Area. A fire area is any floor space enclosed on all sides by exterior walls or fire walls or a combination of both. The number of sprinklers in the average protected fire area shall be determined by the number of sprinklered stories in such section. In

PUBLIC HEARING

determining the required capacity of water supplies, the number of sprinklers in the average protected fire area need not include those located in low positions, such as under benches, low shelves, closets and platforms and between cars in car barns.

Rule 11. Fire Department Connection. All automatic sprinkler systems shall be provided with at least one two-way Siamese connection on each street front of the building for connection to the fire department hose. Buildings fronting on only one street shall be provided with at least two Siamese connections when the street frontage of building exceeds [one hundred and fifty (150)] two hundred (200) feet [in width].

Where buildings have frontages on more than one street there shall be a fire department connection on each street front where frontage is not continuous but in all cases where more than one fire department connection is required they shall be located as the Fire Commissioner may direct and shall not be grouped.

All Siamese hose connections hereafter installed, except those on piers or warehouses intended for fire boat use, shall be three (3) inches in size. Fire boat connections shall be three and one-half (3½) inches in size. All hose connections shall be female, with standard fire department threads.

The inlets shall be placed at least eighteen (18) inches and not more than two (2) feet above the sidewalk, in a horizontal position accessible to the fire department, and shall be provided with a four (4) inch discharge connecting with a four (4) inch pipe to the sprinkler system for three (3) inch fire department connection and with a six (6) inch discharge outlet and six (6) inch pipe for three and one-half (3½) inch fire boat connection. Each inlet shall be provided with a clapper valve machined to a true face.

Each Siamese connection shall be designated by raised letters at least one (1) inch in size, cast in the fitting in a clear and prominent manner and reading for the service designated, viz.: "Base. Spkr.," etc., as the case may be. If the entire building is sprinklered, the fitting shall be marked "Auto. Spkr."

Siamese hose connections may project through a street wall not more than twelve (12) inches beyond the building line except that where there is an angle formed by the street wall and a check piece or the base of a column, pilaster or ornamental projection, they may be so located that no part extends more than fifteen (15) inches from either side of such angle in accordance with the provisions of the Building Code.

In each fire department connection there shall be an approved straightway check valve installed in a horizontal position, unless suitably designed for vertical position, and the piping shall be arranged to drain between the check valve and the outside siamese coupling by either a ball drip having a one-half (½) inch pipe connection and one-half (½) inch orifice and a bronze ball of proper size, or by a three-quarter (¾) inch drip connection, with plugged valve attached, and when necessary arranged to drain to a sewer. A drain connection may be tapped into the body of check valve only when located in a horizontal position.

Rule 12. Automatic Sprinkler Systems. Automatic sprinkler systems shall be classified as:

(a) One Source Systems, supplied with water from any one of the automatic sources; and

(b) Two Source Systems, supplied with water from a combination of any two of the automatic sources; two pressure tanks with a total water capacity twice that required for a one source supply; direct connection to the city water supply on two different streets, so located that the closing of the controlling valve on one main will not eliminate the main on the other street; or a direct connection to the city water supply and one of the auxiliary sources provided the water supply main is at least six (6) inches in size, the main is fed both

ways and a two (2) inch test pipe at the top of the sprinkler riser shows a flowing pressure of fifteen (15) pounds per square inch between the hours of six a. m. to six p. m.

A gravity tank and pressure tank, or a gravity tank or pressure tank and one of the automatic sources or two pressure tanks having a total water capacity for a one-source supply may be considered as a two-source supply where the occupancy of the building does not conflict with Rules 38, 39 and 40 hereinafter provided for.

Rule 13. Sprinkler Spacing. Sprinkler heads and lines shall be spaced as herein provided:

Mill Construction. Under mill ceiling (smooth solid plank and timber construction, 5 to 12 foot bays) one line of sprinklers shall be placed in the center of each bay and the distance between the heads on each line shall not exceed the following:

- (a) For Standard one-half (½) inch heads—
 - 8 feet in 12 foot bays;
 - 9 feet in 11 foot bays;
 - 10 feet in 10 foot bays;
 - 11 feet in 9 foot bays;
 - 12 feet in 5 to 8 foot bays;

- (b) For Conran* one (1) inch heads—
 - 20 feet in 5 to 12 foot bays.

- (c) For Conran* one and one-quarter (1¼) inch heads—
 - 25 feet in 5 to 12 foot bays.

- (d) Vaults used for the storage of nitro-cellulose products and vaults used for the storage of inflammable motion picture films shall have one standard one-half (½) inch head for each 62½ cubic feet of available storage space, or one (1) inch Conran* head for each 250 cubic feet of available storage space.

Measurements shall be taken from center to center of timbers.

Ceilings of modified mill construction having bays less than three (3) feet wide shall be treated as open joist construction and sprinkler heads and lines spaced accordingly.

Bay timbers spaced three (3) feet or more on centers, but less than five (5) feet on centers, will require special ruling by the administrative official having jurisdiction.

Joisted Construction. Under open finish joisted construction ceilings, floor, decks and roofs, the sprinkler lines shall be run at right angles to the joists and the heads "Staggered spaced" so that heads on one line will be opposite a point half way between heads on adjacent lines.

(a) For Standard one-half (½) inch heads the distance between lines of sprinklers shall not exceed ten (10) feet, and the distance between heads on each line shall not exceed eight (8) feet, the end heads on alternate lines being spaced not more than two (2) feet from wall or partition. Permission may be given by the administrative official having jurisdiction to install but one line of sprinklers, in each bay where girders project below the under side of joists and divide the ceiling into bays ten (10) to eleven and one-half (11½) feet wide from center to center of girders, and the heads shall then be spaced on each line so that the area covered by a single head does not exceed eighty (80) square feet. In all cases where such bays are over eleven and one-half (11½) feet wide, two or more lines of sprinklers shall be installed in each bay as required by the rules for spacing.

*Wherever the term "Conran head" is used in these Rules, it is to be taken as meaning either a Conran head of the type tested and approved by the Fire Department, or one that has passed similar tests by the Fire Department.

PUBLIC HEARING

Where girders and joists are flush at the bottom, heads shall be spaced according to the general rule.

(b) For Conran* one (1) inch heads the distance between adjacent lines shall not exceed twenty (20) feet and the distance between the heads on each line shall not exceed sixteen (16) feet, the end heads on alternate lines being spaced not more than four (4) feet from wall or partition. Where girders project below the under side of joists and divide the ceiling into bays not exceeding twenty (20) feet in width, measured from center to center of girders, one line shall be placed in the center of each bay. In bays exceeding twenty (20) feet in width at least two (2) lines shall be installed in each bay and in no case shall the distance between adjacent lines exceed twenty (20) feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads the distance between adjacent lines shall not exceed twenty-five (25) feet and the distance between the head on each line shall not exceed twenty (20) feet, the end head on alternate lines being spaced not more than five (5) feet from wall or partition. Where girders project below the under side of joists and divide the ceiling into bays not exceeding twenty-five (25) feet in width, measured from center to center of girders, one line shall be placed in the center of each bay. In bays exceeding twenty-five (25) feet in width at least two (2) lines shall be installed in each bay, and in no case shall the distance between adjacent lines exceed twenty-five (25) feet.

Smooth Finish, Sheathed or Plastered Ceilings. Under smooth finish, sheathed or plastered ceilings, in bays six (6) feet wide and over (measurements to be taken from center to center of timber, girder or other projection or support forming the bay), sprinkler heads and lines shall be spaced as follows:

(a) For standard one-half ($\frac{1}{2}$) inch heads—

One line of sprinklers shall be placed in the center of each bay for bays not exceeding twelve (12) feet in width, and the distance between the heads on each line shall not exceed the following:

- 8 feet in 12 foot bays;
- 9 feet in 11 foot bays;
- 10 feet in 6 to 10 foot bays.

Bays in excess of twelve (12) feet in width and less than twenty-three (23) feet in width, shall contain at least two (2) lines of sprinklers; bays twenty-three (23) feet in width or over shall have the lines therein not over ten (10) feet apart. In bays in excess of twelve (12) feet in width, not more than one hundred (100) square feet of ceiling area shall be allotted to any single head.

(b) For Conran* one (1) inch heads—

One line of sprinklers shall be placed in the center of each bay for bays not exceeding twenty (20) feet in width, and the distance between the heads on each line shall not exceed twenty (20) feet. Bays in excess of twenty (20) feet in width shall contain at least two (2) lines and in no case shall the distance between adjacent lines exceed twenty (20) feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads—

One line of sprinklers shall be placed in the center of each bay for bays not exceeding twenty-five (25) feet in width and the distance between the heads on each line shall not exceed twenty-five (25) feet. Bays in excess of twenty-five (25) feet in width shall contain at least two (2) lines and in no case shall the distance between adjacent lines exceed twenty-five (25) feet.

Fireproof Construction. The rules of slow-burning mill construction shall apply as far as practicable. The rule may be modified, however, the intent being to arrange the spacing of heads to protect the contents rather than the ceilings; but in no case shall the distance between a head on one line and a head on an adjacent line exceed the following:

(a) For standard one-half ($\frac{1}{2}$) inch heads, 12 feet.

(b) For Conran one (1) inch heads, 20 feet.

(c) For Conran one and one-quarter ($1\frac{1}{4}$) inch heads, 25 feet.

Distance From Walls. The distance from wall or partition to the first head on a sprinkler line shall not exceed one-half the allowable distance between the heads on such line. Additional heads may be required in the narrow pockets formed by bay timbers or beams and wall. Where beams, girders, columns, walls, partitions or other obstructions prevent the effective discharge of water, additional heads shall be installed to effectively sprinkle the area.

Vertical Shafts. In vertical shafts having inflammable sides, heads shall be provided within the shaft in addition to the head or heads at the tops of shafts, as follows:

(a) One standard one-half ($\frac{1}{2}$) inch head for each 200 square feet of inflammable surface.

(b) One Conran* one (1) inch head for each 400 square feet of inflammable surface.

(c) One Conran* one and one-quarter ($1\frac{1}{4}$) inch head for each 500 square feet of inflammable surface.

Such head or heads shall be installed at each floor when practicable, and always when shaft is trapped. Where practicable, heads shall be "staggered" at the alternate floor levels, particularly when only one head is installed at each floor level.

Pitched Roofs. Under a pitched roof sloping more steeply than one (1) foot in three (3) feet, heads shall be located in peak of roof, and those on either side of the peak shall be spaced according to the foregoing requirements. The distance between heads shall be measured on a line parallel with the roof. Where the roof meets the side wall or the floor line, the heads shall be placed not more than the following distance from such intersection:

(a) For standard one-half ($\frac{1}{2}$) inch heads, $3\frac{1}{2}$ feet.

(b) For Conran* one (1) inch heads, 7 feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, $8\frac{1}{2}$ feet.

Heads spaced not to exceed the following distance each way from the peak of roof, measured on a line parallel with the roof, may be used in lieu of heads located in peak of roof:

(a) For standard one-half ($\frac{1}{2}$) inch heads, $2\frac{1}{2}$ feet.

(b) For Conran* one (1) inch heads, 5 feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, $6\frac{1}{4}$ feet.

In sawtooth roof construction, the end heads on the branch line shall be spaced not to exceed the following distance from the peak of the sawtooth:

(a) For standard one-half ($\frac{1}{2}$) inch heads, $2\frac{1}{2}$ feet.

(b) For Conran* one (1) inch heads, 5 feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, $6\frac{1}{4}$ feet.

Special Locations and Variations. In special locations, such as over electric generating, power and transforming apparatus, over their controlling devices and switchboards, where water from the fire extinguishing equipment would be detrimental, the sprinkler lines and heads may be omitted at the discretion of the administrative official having jurisdiction, and when in his judgment a slight variation of this rule of spacing is desirable to effect a more efficient distribution of water for fire extinguishing purposes, the sprinkler lines and heads shall be spaced as he may direct.

Rule 14. Sprinkler Position. All sprinkler heads shall be located, wherever possible, in an upright position on top of the pipes, except that sprinkler heads on automatic wet pipe systems may be pendant on concealed piping and when construction or occupancy of a room or enclosure makes it preferable.

(a) Where standard one-half ($\frac{1}{2}$) inch heads are installed sprinkler deflectors shall be parallel to ceilings, roofs or the

PUBLIC HEARING

incline of stairs, but when installed in the peak of a pitched roof they shall be horizontal. Distance of deflectors from ceilings of mill or other smooth construction, or bottom of joists of open joist construction, shall be not less than three (3) inches nor more than ten (10) inches.

In fireproof buildings, the distance between deflectors and panel ceilings shall not exceed fifteen (15) inches.

Not less than eighteen (18) inches effective clear space shall be left below the sprinkler heads, so that they may discharge an unbroken spray blanket from sprinkler to sprinkler and sides of room when in operation. Any stock piles, racks or other obstructions interfering with such action shall not be permitted. *Sprinkler system piping shall not be used for the support of stock, clothing, etc.*

(b) Where Conran* heads are installed, the top of head shall be located the same distance below joists or ceiling as specified for deflectors in paragraph (a) of this rule; except that when heads are located under pitched roofs of piers or similar structures, they shall in general be installed in the upright position (not normal to slope of roof) and three (3) feet vertically below the underside of roof. When the administrative official having jurisdiction deems a variation of this rule advisable to obtain a more efficient distribution of water, the heads shall be located with respect to joists or ceiling, as he may direct.

Rule 15. Pipe Sizes. The number of heads on a given size pipe in one fire area in any story shall not exceed the following:

(a) For standard one-half ($\frac{1}{2}$) inch heads—

Size of Pipe	Maximum No. of Heads Allowed
$\frac{3}{4}$ inch	1 head
1 "	2 heads
$1\frac{1}{4}$ "	3 "
$1\frac{1}{2}$ "	5 "
2 "	10 "
$2\frac{1}{2}$ "	20 "
3 "	36 "
$3\frac{1}{2}$ "	55 "
4 "	80 "
5 "	140 "
6 "	200 "
7 "	300 "
8 "	420 "

(b) For Conran* one (1) inch heads—

Size of Pipe	Maximum No. of Heads Allowed
1 inch	1 head
$1\frac{1}{4}$ "	2 heads
$1\frac{1}{2}$ "	3 "
2 "	4 "
$2\frac{1}{2}$ "	6 "
3 "	9 "
4 "	18 "
5 "	34 "
6 "	51 "
7 "	75 "
8 "	105 "

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads—

Size of Pipe	Maximum No. of Heads Allowed
$1\frac{1}{4}$ inch	1 head
$1\frac{1}{2}$ "	2 heads
2 "	3 "
$2\frac{1}{2}$ "	4 "
3 "	6 "
4 "	12 "
5 "	21 "
6 "	40 "
7 "	60 "
8 "	84 "

When it is desired to use pipe of larger size than eight (8) inches in diameter, special ruling will be required by the administrative official having jurisdiction as to the permissibility of its use and the number of heads that may be fed thereby.

Where practicable, it is desirable to arrange the piping so that the number of heads on a branch line will not exceed eight.

When the piping is arranged on the "gridiron" plan, the permissible number of heads may be doubled, provided the feed main is of the size indicated in the schedule for the total number of heads.

Where feed mains supply branch lines of only two heads each, the conditions approach those of long single lines. Such feed mains shall usually be centrally supplied where there are over eight (8) or ten (10) branch lines. Branch lines up to fourteen (14) in number may be fed from end, provided a two and one-half ($2\frac{1}{2}$) inch pipe does not supply more than sixteen (16) standard one-half ($\frac{1}{2}$) inch heads, in lieu of twenty (20).

Buildings having slatted floors, or large unprotected floor openings without approved stops, shall be treated as one room with reference to the pipe sizes, and the feed main shall be of sufficient size to accommodate the number of heads called for. Larger pipe sizes than are allowed in the schedule for a given number of heads may be required wherever the construction or conditions introduce unusually long runs of feed mains or many angles. Buildings with blind attics with small unprotected openings to floor below, may be piped from the system on the ceiling of floor below, provided pipe size schedule is not overloaded on sizes three (3) inches or under.

Rule 16. Feed Mains. The size of feed mains shall not be less than the size of riser and shall be arranged to run as direct as possible from source of water supply to riser.

Feed mains for stair or other towers without approved stops between floors, when piped on independent riser, shall be of sufficient size to accommodate the total number of sprinklers in such tower.

Rule 17. Risers. There shall be one or more separate risers in each building and in each section of the building divided by fire walls. Risers shall be arranged to provide "Center Central" or "Side Central" supply to feed main. Each riser shall be of sufficient size to supply all the heads on said riser in one story, according to the schedule of pipe sizes in Rule 15.

In buildings of fireproof construction, and for the purposes of this rule, a blank wall, or one in which the openings are protected by standard fire doors, may be considered as a fire wall, if of equivalent construction.

If the conditions warrant, special permission will be granted allowing the heads in a fire section of small area to be fed from the risers in another section, provided the total number of heads in such area does not exceed the following number per floor:

(a) For standard one-half ($\frac{1}{2}$) inch heads, 48.

(b) For Conran* one (1) inch heads, 12.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, 8.

Risers shall not be located close to windows, properly protected from mechanical injury and freezing and shall be properly supported on foundations and by floor plates, clamps, couplings or hangers.

No connections, such as for sill cocks, house service or hose outlets, shall be made with a sprinkler system riser or any part thereof.

Where gravity and pressure tanks feed through a common discharge pipe or "dead riser" to the foot of a riser and an air lock is likely to develop the discharge pipe of the gravity tank shall connect with the discharge pipe, or "dead riser", forty (40) feet below the bottom of the pressure tank.

PUBLIC HEARING

Rule 18. Pipes and Fittings. All pipe shall be full-weight standard wrought iron or steel threaded pipe, well reamed and screwed up tight into fittings without reducing the waterway. Fittings shall be standard cast iron fittings, and shall be long turn pattern on feed mains and risers.

Such fittings shall be designed and guaranteed for a working pressure of 150 pounds per square inch and must be capable of withstanding a hydrostatic test pressure of 750 pounds per square inch without failure.

All pipe shall be secured to the ceiling, walls and other parts of the building with standard steel, wrought or malleable iron hangers.

Extra heavy fittings shall be employed where the normal pressure in the pipe system exceeds one hundred and fifty (150) pounds per square inch, and shall be designed for a working pressure of 250 pounds per square inch and be capable of withstanding a hydrostatic test pressure of 1,250 pounds per square inch without failure.

All underground pipe shall comply with the specifications for cast iron pipe of the American Water Works Association.

Rule 19. Protection of Pipes and Sprinklers. When exposed to moisture, sprinkler pipes and hangers shall be protected against corrosion whenever found necessary by thoroughly cleaning the pipe of all scale and grease and painting with a coat of red lead and linseed oil paint or other acceptable moisture resistive paint. When exposed to chemical fumes, the pipe and fittings shall be coated with graphite or other approved chemical resistive paint. Care shall be taken not to paint the sprinkler heads.

Supply pipes of risers in low basements or low spaces under ground floors exposed to frost, shall be properly protected by a masonry or wood enclosure, properly heated, or filled with mineral wool, sawdust or tar mixed with granulated cork, extending below bottom of pipe and through the top flooring of ground floor, or the pipe shall be protected with three alternate layers of one-inch hair felt and building paper or by other approved method. When of wood, such enclosure shall be constructed double with a layer of tar paper between the two thicknesses of wood.

Where risers, drains, heating pipes, etc., pass through cinder concrete floors or partitions, they shall be protected with a metal sleeve or be grouted with cement mortar.

Wherever sprinklers are exposed to corrosion, the heads shall be protected with an approved hermetically sealed cover, or with an approved wax coating.

Rule 20. Drainage. All sprinkler pipe and fittings shall be so installed that they can be thoroughly drained, and where practicable, all piping shall be arranged to drain at the main drips.

Drains or drip pipes shall be so arranged as not to expose any part of the sprinkler system to frost, and shall be so connected, either by check valves or other means, that they will not [overthrow] overflow domestic service or other connections to the same sewer or house drain, or if carried through the wall and exposed to the weather, they shall be fitted with hoods or down-turned elbows.

Drains, pitched not less than one-quarter ($\frac{1}{4}$) inch in ten (10) feet, shall be installed:

- At the base of the main riser;
- At each alarm valve;
- At each dry-pipe valve;
- At each gravity tank;
- At each pressure tank.
- At each fire department connection;

On each floor, if independent floor control valves are used; and

At each supply main, when the water in the same cannot be removed through any of the above drains. Such drains shall be installed with controlling valves so that flowing tests may be made to determine if the water supplies or connections from yard mains to the inside of the build-

ing are in order without causing water damage or overflowing service connections to the same house drain. Any such drain shall be not less than two (2) inches in size except that drains at independent floor valves [may be one and one-quarter ($1\frac{1}{4}$) inches in size] shall be not less than 1 inch in size where floor valves are not over $2\frac{1}{2}$ inches in size and $1\frac{1}{4}$ inches where floor valves are larger, and connected to a main drain riser of not less than $1\frac{1}{2}$ inches in size. The drain at the main riser shall discharge into a cone or sight drain, or if carried through the wall and exposed to the weather, it shall be fitted with a hood or down-turned elbow.

At an alarm valve at the top of a riser in a down-fed system a drain shall not be required.

At each gravity or pressure tank erected above roof of a building there shall be a 4-inch valved drain connection so arranged as to discharge on roof of building. And where a tank is on a separate structure altogether independent of buildings drain connection to be arranged to discharge at ground level.

On automatic wet pipe systems, the horizontal branch pipes shall be pitched not less than one-quarter ($\frac{1}{4}$) inch in ten (10) feet to drain towards the sources of supply with drip valves at the low points.

On automatic dry-pipe systems, branch pipes shall be pitched at least one-half ($\frac{1}{2}$) inch in ten (10) feet.

Rule 21. Test Pipe. [On] In all wet-pipe automatic sprinkler systems a test pipe of not less than $\frac{3}{4}$ inch in diameter shall be connected directly with each [riser] system but shall be connected to a pipe of not less than $1\frac{3}{4}$ inches in diameter in upper story and arranged to discharge, through a $\frac{1}{2}$ -inch brass outlet, preferably to a point where it can readily be seen. With long runs or many angles, size of test pipe [shall] should be increased to one (1) inch or larger. Controlling valve should be located at a sufficient distance from where the test pipe passes through the wall of the building so as to reduce to a minimum the chance of freezing of water in test pipe.

In all dry-pipe automatic sprinkler systems a $\frac{3}{4}$ -inch inspector's test pipe shall be installed at the end of the most distant branch line and fitted with a $\frac{3}{4}$ -inch shut-off valve stopped with a brass plug.

Rule 22. Pressure Gauges. A four and one-half ($4\frac{1}{2}$) inch double-spring Bourdon pressure gauge shall be provided in all automatic sprinkler systems as follows:

- Above dry-pipe valves;
- Below dry-pipe valves;
- At the pressure tank;
- At the air compressor;
- Above the alarm valve;
- Below the alarm valve; and

In the connections from city water supply.

Provision may be made for taking the pressure both above and below the alarm valve and the dry-pipe valve with only one gauge at each valve.

A gauge shall not be required at an alarm valve located at the top of a riser in a down-fed system.

Gauge connections shall be taken from the supply main or riser and not from the two-inch drain or test pipe.

Gauges shall be installed in a suitable place protected from freezing and be controlled by a valve with arrangements for draining. A plugged outlet, not less than one-quarter ($\frac{1}{4}$) inch in size, shall be located between each valve and gauge for purpose of installing the inspector's gauge.

Rule 23. Valves. All valves two (2) inches in diameter and under shall be of brass or bronze, or other approved [non-corrodible] non-corrosive material. Valves over two (2) inches in diameter shall be of brass, or bronze or iron body, brass mounted, or of other approved [non-corrodible] non-corrosive material.

All sidewalk Siamese inlet valves, caps and chains shall be of galvanized cast iron or other approved [non-corrodible] non-corrosive material.

PUBLIC HEARING

All gate valves shall be solid or double wedge disc, suffing box pattern with hand wheel, outside screw and yoke, or other approved indicator pattern.

All check valves shall be approved straight way regrinding pattern, so built that the clappers may be readily removed for repairs.

Rule 24. Water Supply Gate Valves. The piping connecting each source of water supply with the sprinkler system shall be provided with a gate valve of the outside screw and yoke type, sealed open and tagged to designate its purpose, so located as to control each source of water supply except that from fire department hose connections. All such gate valves shall be located within the building where easily visible and readily accessible and as close as possible to the supply inlet.

Rule 25. Water Supply Check Valves. The piping connecting each source of water supply with the sprinkler system, including fire department connections, shall be provided with a check valve.

On two-source systems, check valves shall have a gate valve on each side to permit repair of check without shutting off both supplies, except that where the two sources of supply consist of tanks located above the highest line of sprinklers, a gate valve need only be provided on the downstream side of each check valve.

Rule 26. Control Valves. All automatic sprinkler systems shall be provided with a main control or shutoff valve arranged to be readily accessible and sealed in the open position; except that when the sprinkler system is fed from water supplies on the roof of the building, independent and readily accessible floor control valves, sealed in the open position, may be installed.

When not more than ten (10) standard one-half ($\frac{1}{2}$) inch sprinkler heads or three (3) Conran* heads in any automatic wet pipe system are exposed to cold and subject to freezing, shutoff valves may be provided to discontinue the water supply to such heads between November 1 and April 1. A greater number of heads than specified above, located in places which cannot be properly heated, shall be controlled by an automatic dry-pipe valve.

Rule 27. Dry-Pipe Valves. A dry-pipe valve shall be taken to mean a valve automatically controlling the water supply of the sprinkler system in such a manner that under normal conditions its piping system beyond the valve is maintained dry, but in the event of fire, the valve automatically releases the water into the sprinkler system, for fire extinguishing purposes.

Dry-pipe valves shall, for the purpose of these rules, be classified as follows:

Type A, in which the valve is actuated by the release of compressed air in the sprinkler piping system, due to the opening of a sprinkler head; and

Type B, in which the valve is actuated by an approved trip under electric control of an approved automatic thermostatic fire alarm system.

Dry-pipe valves shall be located as near as practicable to the sprinkler system in an enclosed and accessible place protected from mechanical injury and freezing.

When anti-columning pipes are used, they shall be either lead lined or of brass.

Automatic wet-pipe sprinkler systems in which only twenty-five (25) per cent of the heads are required to be maintained dry for protection from freezing, shall have only such heads under dry-pipe valve control.

(a) When "Type A" valve is installed, the air pressure in sprinkler systems under such dry-pipe valve control shall not exceed forty (40) pounds per square inch, nor be permitted to fall below twenty-five (25) pounds per square inch, nor shall it be less than one-sixth ($\frac{1}{6}$) of the water pressure in any case.

The air compressor shall have a capacity of not less than eleven (11) cubic feet per minute and the air supply for the pump shall be taken, if possible, from a room containing dry air, or it shall be passed through a drying chamber containing calcium chloride, in order to avoid the introduction of moisture into the system.

The air pressure on such dry-pipe systems shall be maintained throughout the year.

Not more than the following number of heads shall be controlled by one "Type A" dry-pipe valve:

- (a) For standard one-half ($\frac{1}{2}$) inch heads400
- (b) For Conran* one (1) inch heads100
- (c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads 84

Where equipped with an approved quick-opening device the following number of heads may be controlled by one "Type A" dry-pipe valve:

- (a) For Standard one-half ($\frac{1}{2}$) inch heads800
- (b) For Conran* one (1) inch heads200
- (c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads 128

(b) When "Type B" valve is installed the actuating alarm system shall be designed to operate at a temperature lower than that required to open the sprinkler heads, and all connections between the alarm system and the dry-pipe valve shall be adequately protected against injury of any kind.

When required by the administrative official having jurisdiction, the dead end of every feed main in such dry-pipe system shall be provided with an air relief valve or vent, so constructed as to be normally open in order to permit the free escape of air from the system, but to close automatically against the escape of water.

Not more than the following number of heads shall be controlled by one "Type B" dry-pipe valve:

- (a) For Standard one-half ($\frac{1}{2}$) inch heads500
- (b) For Conran* one (1) inch heads125
- (c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads. 84

Rule 28. Alarm Valve. All automatic wet pipe sprinkler systems shall be equipped with an alarm valve so constructed that a flow of water through a one-half ($\frac{1}{2}$) inch orifice will operate an electric or mechanical gong.

Dry pipe valves shall be equipped with a reliable device to give either an electrical or mechanical alarm.

Rule 29. High and Low Water and Pressure Alarm. All gravity tanks shall be equipped with a device to indicate when the water falls below or rises above the normal level in the tank, with an indicator or alarm located in the engineer's room near the pump.

All pressure tanks shall be equipped with a device to indicate when the pressure in the tank falls below seventy (70) or rises above eighty (80) pounds per square inch with an indicator or alarm located in the engineer's room [near the compressor.].

Rule 30. Heating of Tanks. The water in all sprinkler tanks subject to freezing shall be protected by internally heating the water or enclosing the tank in a frost-proof house properly heated and lighted.

Rule 31. Concealed Pipe Systems. All pipe in concealed pipe systems shall be of standard full-weight wrought iron or steel, painted with two coats of protective paint, one before and one after installation. Such pipe shall be installed in ducts or be encased in cement mortar and shall be inspected prior to concealment. When installed in the concealed space between floor arches and ceiling, such pipe shall be supported by hangers and all pipe, fittings and hangers be protected with two coats of paint.

Rule 32. Preparation of Building. Floor or wall openings and other structural defects which prevent the banking up of heated air and retard the automatic action of sprinkler heads shall be provided with the necessary curtain boards and draft stops to permit specific control of the fire by the local sprinklers.

Curtain boards shall project at least three (3) inches below the lowest sprinkler.

PUBLIC HEARING

Rule 33. *Approval of Sprinkler System [Tests]. Before acceptance* all automatic sprinkler systems, excluding the water supply tanks, shall be subjected after installation to a hydrostatic pressure of a test of at least fifty (50) pounds per square inch in excess of that which will be normally carried and observed in the sprinkler system, such test pressure, however, never to be less than one hundred and fifty (150) pounds per square inch in any part of the system.

All pressure tanks shall be tested after erection to a test pressure of one and one-half ($1\frac{1}{2}$) times the working pressure. To prevent the possibility of serious water damage in case of a break, the pressure shall be maintained by a small pump, the main controlling gate being meanwhile kept shut. Brine or other corrosive chemicals shall not be used for testing systems.

In automatic dry-pipe systems with "Type A" valve control, an air pressure of forty (40) pounds per square inch shall be pumped up, be held for twenty-four (24) hours, and all leaks stopped which allow a loss of pressure of over two (2) pounds per square inch for the twenty-four (24) hours.

In the case of automatic dry-pipe systems with differential "Type A" valve, the valve shall be held off its seat during the test to prevent injuring the valve.

Non-automatic systems shall be tested after installation at not less than fifty (50) pounds per square inch in excess of the pressure necessary to reach the highest line of sprinklers.

All tests of installed systems shall be made by the contractor in the presence of the Fire Commissioner, or his authorized representative.

No piping, devices nor any portion of a newly constructed sprinkler system shall be covered up or permanently concealed until tested by the Bureau of Fire Prevention and approved of in writing, except piping passing through floors, walls, partitions or beams for distances equal to the thickness of such floors, walls, partitions or beams.

Rule 34. *Non-fireproof Business Buildings.* Automatic sprinklers required in non-fireproof business buildings under the provisions of Chapter 5, Article 4, Section 72, Code of Ordinances, unless otherwise specifically provided in these rules, shall consist of at least a One Source System.

Rule 35. *Dangerous or Hazardous Buildings.* Automatic sprinklers required in buildings having occupancies considered to be dangerous or hazardous by the Fire Commissioner shall consist of at least a one-source system unless otherwise specifically provided for in these rules.

Rule 36. *Factories and other Buildings.* Automatic sprinklers required in buildings under the provisions of the Code of Ordinances and the Labor Law shall consist of at least a one-source system.

Rule [35] 37. *Theatre Buildings.* Automatic sprinklers required in theatre buildings under the provisions of Chapter 5, Article 25, Section 524, Code of Ordinances, shall consist of at least a One Source System.

Rule [36] 38. *Firework Storage.* Automatic sprinklers required in buildings in which fireworks are stored or sold under the provisions of Chapter 10, Article 6, Section 92, Code of Ordinances, shall consist of a Two Source System.

Rule [37] 39. *Nitro-Cellulose Products.* Automatic sprinklers as required in buildings in which nitro-cellulose products are stored under the provisions of Chapter 10, Article 19, Section 232, Code of Ordinances, shall consist of a system supplied from both approved gravity tank supply and an approved pressure tank supply, except that no change shall be required in supplies to automatic sprinkler equipments previously approved by the Fire Commissioner as two source systems, in conformity with the provisions of this rule as in force up to December 1, 1921.

In buildings wherein are stored or handled only limited quantities of nitro-cellulose products, not exceeding 500 pounds, the automatic sprinklers may consist of a two source system as provided for in Rule 12.

Rule [38] 40. *Inflammable Motion-Picture Films.* Automatic sprinklers, required in buildings in which inflammable motion-picture films are stored under the provisions of Chapter 10, Article 20, Section 241, Code of Ordinances, shall consist of a system supplied from both an approved gravity tank supply and an approved pressure tank supply except that no change shall be required in supplies to automatic sprinkler equipments previously approved by the Fire Commissioner as two source systems in conformity with the provisions of this rule as in force up to December 1st, 1921.

Rule [39] 41. *Existing Installations and Approvals.* Automatic extinguisher systems and devices heretofore approved and accepted by the authorities having jurisdiction shall not be required to conform to the provisions of these rules; and all such systems heretofore installed shall not be required to be altered to conform to these rules so long as the fire hazard due to construction and occupancy of the building is not increased or where substantial additions or extensions in height or area is made to the building when these rules shall apply if deemed advisable or necessary by the Fire Commissioner and the system after inspection is found to be in good working order.

Rule 42. *Communicating Openings.* When a building fully equipped with sprinklers communicates with another not so equipped the openings must be protected by approved fire doors on both sides of the wall, one of which must be automatic.

Rule 43. *Maintenance Inspections.* Automatic sprinkler systems shall be inspected at least once a month by the person in charge of the building, or by other competent person employed by the owner, to see that all parts of the system are in perfect working order, and the fire department connection or connections, if any, ready for immediate use by the Fire Department. A detailed record of each inspection shall be kept for examination by a representative of the Fire Department.

There shall be kept available at all times in the premises a supply of extra sprinklers, never less than six (6), to replace promptly any fused or damaged sprinklers. And there shall be one or more employes instructed in the maintenance of sprinkler system.

Rule 44. *Open Sprinklers.* When open sprinklers are required for exposure protection by the Fire Department as specified in the Building Code they shall be installed in accordance with the rules of the National Board of Fire Underwriters. Plans for such installation to be filed with the Fire Department for approval.

WARNING.

Notice is hereby given to all petitioners, appellants and applicants for relief at the hands of the Board of Standards and Appeals and of the Board of Appeals, and to all lawyers, architects and engineers representing owners or lessees in proceedings before these boards—

First, That if they do not appear in person or by representative at the hearing on their case, dismissal for lack of prosecution is likely to result.

Second, That due and ample notice of the date set for hearing is provided in the publication in this BULLETIN of the calendars of these boards, each case being set down by Calendar Number and premises under the date of the hearing.

Third, That no plea of ignorance of the date of the hearing can be entertained in view of this publication and

of the posting of the calendars on the bulletin board in the offices of the board and of the further publication of the calendars in the daily press.

Fourth, That no one is entitled to written notice of the date for the hearing in his case, and that the plea of failure to receive such notice is no excuse for neglect to appear.

Fifth, That the business of these boards is to dispose of all cases promptly, for the reason that the pendency of an appeal or petition ties the hands of the administrative official in enforcing his order; therefore, no appeal or petition will be allowed to be hung up by reason of failure of the appellant or petitioner to file necessary data, or by any other method of delay.

BOARD OF STANDARDS AND APPEALS,
Room 1001, Municipal Building,
New York City.

Enclosed please find two dollars and a half (\$2.50) for subscription for one year to THE BULLETIN OF THE BOARD OF STANDARDS AND APPEALS. Please mail THE BULLETIN to

WILLIAM E. WALSH, Chairman

Commissioners

JOSEPH FLANAGAN

JOHN GUILFOYLE

FIRE CHIEF JOHN KENLON

Office—Municipal Building, Rooms 1001 to 1015.

Telephone—Worth 0184.

Office Hours—9 a. m. to 5 p. m. Saturdays, 9 a. m. to 12 noon.

Communications should be addressed to the chairman of the board

CONTENTS

This issue of the Bulletin contains, in the order

Docket.

Call of Clerk's Calendar.

The Trial Calendar.

Notices in Building Zone Cases.

Minutes of Special Meeting, September 25, 1925.

Special Notice.

Notice of Public Hearing.

Reserve Calendar.

Progress Report.

PUBLIC HEARINGS

Tuesdays, at 10 a. m. and 2:30 p. m.
Special meetings as published in this Bulletin.
Call of Clerk's Calendar, Tuesdays, at 2 p. m.
All hearings are held in Room 1013, Municipal Building, Manhattan.

HOURS FOR CONSULTATION.

10 A. M. to 1 P. M.

Any person desiring to consult the chairman or the engineers, pertaining to the work of the boards will be seen only between the hours of ten in the morning and one in the afternoon—Saturdays excepted.

CALL OF CLERK'S CALENDAR.

The *Clerk's Calendar* consists of applications under the Building Zone Resolution, and its object is to give interested property owners opportunity to file objections, if any, and will be called in Room 1013, Tuesday, October 6, 1925, at 2 o'clock. At this call each case is set for hearing on a definite day.

The next subsequent Call of the Calendar will be on Tuesday, October 13, 1925, at 2 o'clock.

The *Clerk's Calendar* is not to be confused with the calendar of cases that have been definitely set for hearing on fixed days.

NOTICE TO APPELLANTS AND PETITIONERS.

No appeal, application or petition will be entertained in connection with which court proceedings are pending or in progress, nor accepted that are not filed within twenty days from the date of the action of the Administrative Official.

Any communication purporting to be an appeal, application or petition shall be regarded as a mere notice of intention to seek relief until it is filed on the form required by the rules of this board.

Upon receipt of any such communication the writer will be supplied with the official forms for presenting his appeal, application or petition, and if he fails to supply the data required thereon, within twenty days, his case may be dismissed for lack of prosecution.

At the time of filing an application, the appellant or petitioner shall forward a signed notice of appeal addressed to the administrative official (either superintendent of buildings or fire commissioner) and file with this board a duplicate of said notice.

Petitioners are advised that their plans must indicate the points of the compass so as to establish the true location and position of the property, the subject of the appeal.

Appeals, applications and petitions will be simplified and expedited by conforming to these directions.

WILLIAM E. WALSH, Chairman.

Doyle, applicant, on behalf of Ferdinand Curtli, owner, to permit in a residence district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles; premises 229-233 Marion street, Brooklyn.

CAL. NO. 555-25-BZ—Application, May 29, 1925, under the building zone resolution, of William A. Lacerenza, architect, on behalf of Samuel Klein, owner, to permit the extension from a business district into a residence district of a proposed building to be used for business purposes; (dance hall); premises 1062 St. John's place, Brooklyn.

CAL. NO. 570-25-BZ—Application, June 2, 1925, under the building zone resolution, of Michael Pellegrino, applicant and owner, to permit partly in a business district and partly in a residence district the erection and maintenance of five (5) buildings to be used for stores on the 1st story and dwellings above; premises northwest corner of Ocean avenue and Avenue U, Brooklyn.

CAL. NO. 532-25-BZ—Application, May 27, 1925, under the building zone resolution, of William F. Doyle, applicant, on behalf of Menick Holding Co., Inc., owner, to permit in a residence district extending from a business district the erection and maintenance of a theatre building; premises 868 Flatbush avenue, Brooklyn.

CAL. NO. 560-25-BZ—Application, May 29, 1925, under the building zone resolution, of Charles Kreymborg and Son, architect, on behalf of Cerussi Contracting Co., owner, to permit the extension from an unrestricted district of a proposed garage for the storage of more than five (5) motor vehicles; premises 4583 Third avenue, The Bronx.

CAL. NO. 863-25-BZ—Application, August 26, 1925, under the building zone resolution, of Francis L. Archer, applicant, on behalf of Empire Investors Corp., owner, to permit in a

residence district extending from a business district the erection and maintenance of a business building; premises 660 Fifth avenue, northwest corner of 52nd street, Manhattan.

WILLIAM E. WALSH, *Chairman.*

BOARD OF STANDARDS AND APPEALS

PETITIONS FOR VARIATIONS.

Tuesday, October 13, 1925, at 2 p. m.

- 380-25-S—125 Nostrand avenue, Brooklyn.
- 406-25-S—178-182 Sullivan street, Brooklyn.
- 413-25-S—473-485 Kent avenue, Brooklyn.
- 488-25-S—10 West 56th street, Manhattan.
- 492-25-S—243-245 West 36th street, Manhattan.
- 493-25-S—540-552 Eighth avenue and 265-267 West 37th street, Manhattan.
- 541-25-S—1 Arnold street, Maspeth, Queens.
- 572-25-S—471 West Broadway, Manhattan.
- 612-25-S—334 Bowery, Manhattan.
- 617-25-S—245-249 West 27th street, Manhattan.
- 562-25-S—248-250 Central avenue, Brooklyn.
- 765-25-S—149 West 40th street and 561-565 Seventh avenue, Manhattan.
- 41-25-S—58 Stone street and 91-93 Pearl street, Manhattan.
- 62-25-S—24-30 West 39th street, Manhattan.
- 265-25-S—233-235 West 26th street, Manhattan.
- 563-25-S—263-271 West 38th street, Manhattan.
- 592-25-S—461-467 Tenth avenue, Manhattan.
- 614-25-S—909 Faile street, The Bronx.

APPLIANCES SUBMITTED FOR APPROVAL.

- 513-25-SA—Rotary Vacuum Pumps, approval of.
- 558-25-SA—Globe Dry Pipe Sprinkler Accelerator, approval of.
- 603-25-SA—Cook Automatic Electric Fuel Oil Pump, approval of.

BUILDING ZONE APPLICATIONS.

NOTICE IS HEREBY GIVEN by the board of standards and appeals of a public hearing under the provisions of the building zone resolution, *Tuesday morning, October 20, 1925, at 10 o'clock, in Room 1013, Municipal Building, on the following matters:*

- CAL. NO. 638-23-BZ—Application, September 8, 1925, under the building zone resolution, of Samuel Rosenblum, architect, on behalf of Max Notess, owner, to permit in a residence district the maintenance of a garage for the storage of three (3) pleasure motor vehicles, two (2) spaces rented to persons not residing on the premises (previously dismissed for lack of prosecution); premises 2965 Valentine avenue, The Bronx.
 CAL. NO. 608-25-BZ—Application, June 11, 1925, under the building zone resolution, of McCooey and Conroy, applicants, on behalf of Lowlou Corporation, owner, to permit partly in a business district and partly in a residence district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles; premises 1095-1117 Washington avenue, southeast corner of Sterling street, Brooklyn.
 CAL. NO. 622-25-BZ—Application, June 16, 1925, under the building zone resolution, of Edward P. Doyle, applicant, on behalf of Simon Brown, owner, to permit in a residence district the change of occupancy of a building used as a residence to a business use on the 1st story; premises 131 Starr street, Brooklyn.
 CAL. NO. 1523-24-BZ—Application, December 27, 1924, under the building zone resolution, of John J. Dunnigan, applicant, on behalf of Christine Bottenus, owner, to permit in a residence district the maintenance of a garage for the storage of four (4) pleasure motor vehicles, four (4) spaces rented to persons not residing on the premises; premises 1665 Davidson avenue, The Bronx.
 CAL. NO. 364-25-BZ—Application, April 3, 1925, under the building zone resolution, of Murray

Klein, architect, on behalf of Barney Zinick, owner, to permit the extension from an unrestricted district into a business district of a proposed garage for the storage of more than five (5) motor vehicles; premises 9-17 Bainbridge street, Brooklyn.

- CAL. NO. 503-25-BZ—Application, May 13, 1925, under the building zone resolution, of William F. Doyle, applicant, on behalf of John E. Eustis, owner, to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles; premises northeast corner of West 179th street and Cedar avenue, The Bronx.
 CAL. NO. 607-25-BZ—Application, June 11, 1925, under the building zone resolution, of McCooey and Conroy, applicants, on behalf of Israel Feinberg and Joe Bernstein, owners, to permit in a residence district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles; premises 2552-2556 Bedford avenue, Brooklyn.
 CAL. NO. 518-25-BZ—Application, May 19, 1925, under the building zone resolution, of Mary J. Cheeseman, applicant and owner, to permit in a residence district the maintenance of a hairdressing business use, contrary to section 3 of the building zone resolution; premises 110 West 82nd street, Manhattan.
 CAL. NO. 661-25-BZ—Application, June 25, 1925, under the building zone resolution, of George Kindermann, applicant, on behalf of Manderkin Building Co., owner, to permit in a business and also in a "B" area district the omission of a rear yard as required by the building zone resolution; premises 1362-1366 Webster avenue, The Bronx.
 CAL. NO. 754-25-BZ—Application, July 20, 1925, under the building zone resolution, of Robert Tappan, applicant, on behalf of Cord Meyer Development Co., owner, to permit in a residence district the erection and maintenance of a group of twenty-six (26) one-car attached garages for the storage of pleasure motor vehicles as an accessory to private dwellings located within the same block; premises north side of Austin street, bounded by Puritan avenue and Atom place, Forest Hills, Borough of Queens.

BOARD OF STANDARDS AND APPEALS

SPECIAL MEETING.

FRIDAY AFTERNOON, SEPTEMBER 25, 1925.

Present: Chairman Walsh, Messrs. Dowd, Gunnison, Holland, Connell, Fire Chief Kenlon, Superintendents Brady and Kleinert.

77-25-SR.
PETITIONER—National Automatic Sprinkler Association.

SUBJECT—Proposed amendments to the Sprinkler Rules.
APPEARANCES—

For Petitioner: C. G. Hoagland, W. P. Plumer.

ACTION OF BOARD—Laid over to October 23, 1925, at 2 p. m.

EDWARD V. BARTON, *Acting Secretary.*

SPECIAL NOTICE

The meeting scheduled for October 2, 1925, at 10 a. m. has been laid over to Friday, October 16, 1925, at 2 p. m.

PUBLIC HEARING

PROPOSED AMENDMENTS TO RULES GOVERNING FIRE EXTINGUISHING APPLIANCES— SPRINKLER SYSTEMS.

[77-25-SR]

NOTICE IS HEREBY GIVEN that a public hearing will be held by the Board of Standards and Appeals on Friday, October 23, at 2 p. m., Room 1013, Municipal Building, on proposed amendments to Rules for Fire Extinguishing Appliances, Sprinkler Rules.

General Requirements. The rules contained herein cover the general details of a sprinkler equipment only. Before an equipment is installed or before a present equipment is remodeled, complete working plans should be submitted for approval to Fire Department.

These plans shall be drawn to an indicated scale; give correct address and points of compass; show sectional elevations of the building; and the essential features of the construction, viz., size, location and direction of joists, timbers or other structural members. They shall also indicate the location and size of water supplies, connecting pipes, feed mains and risers, gate, check, alarm and dry-pipe valves, as well as the location, spacing, number and type of sprinklers.

Upon approval of preliminary plans such number of sets of clean, corrected plans on cloth as the Fire Commissioner may require, not exceeding three (3), shall be filed for final approval of the Fire Commissioner. A certified copy of the approved plans shall be forwarded to the Bureau of Buildings by the Bureau of Fire Prevention. Such application and specification forms as may be prescribed by the Fire Commissioner shall accompany preliminary plans. If a standpipe (fire line) equipment is provided throughout the building, the plans shall include a note to that effect.

When entirely completed in accordance with the approved plans and as per test herein provided for, application shall be made to the Bureau of Fire Prevention for inspection of the completed installation. When the sprinkler equipment is approved the applicant will be so advised in writing by the Bureau of Fire Prevention.

All sprinkler equipments shall be installed in a thoroughly workmanlike manner.

Rule 1. Definition of Automatic Extinguisher Systems. Automatic extinguisher systems shall consist of a system of piping connected to one or more acceptable sources of water supply, or other extinguishing medium, provided with distributing devices so arranged and located as to discharge and diffuse automatically under the action of heat an effective stream or spray over every part of the interior of the building area in which a fire may start or to which it may be communicated.

Rule 2. Classification of Sprinkler Systems. For the purpose of these rules, sprinkler systems shall be classified as:

(a) Automatic Wet Pipe Systems, in which all pipes and sprinkler heads are at all times filled with water;

(b) Automatic Dry Pipe Systems, in which the pipes and sprinkler heads are filled with air, either compressed or at atmospheric pressure, and the water supply is operated by a Dry Pipe Valve as defined in Rule 27 of these Rules.

(c) Non-Automatic Systems, in which all pipes and sprinkler heads are maintained dry with a fire department connection for water supply.

Thermostatic fire alarm with direct connection to Central Office or Fire Department Headquarters shall be provided in connection with all non-automatic sprinkler systems.

Rules 3. Approved Devices. Automatic Sprinklers and accessory appliances shall include all devices approved as such by the Bureau of Standards, Washington, D. C.; by the Underwriters' Laboratories, Inc., of Chicago; by the Associated Factory Mutual Laboratories of Boston; and all devices which meet the tests prescribed by the Board of Standards and Appeals.

Rule 4. Water Supply. Approved sources of water supply shall be classified as Automatic and Auxiliary.

(a) Automatic Sources shall include the Gravity Tank, the Pressure Tank, [and] the Public Water System, and the Automatic Electric Fire Pump, installed as required under the provisions of Rule 8, hereinafter provided for.

b) Auxiliary Sources shall include the non-automatic Fire Pump and the Fire Department Connection.

Rule 5. Gravity Tank. Gravity tanks shall contain an available quantity of water sufficient to supply twenty-five per cent (25%) of the number of sprinkler heads in the average protected fire area for twenty (20) minutes, but not less than 5,000 gallons; and the bottom of the tank shall have an elevation of not less than twenty (20) feet above the highest line of sprinklers below the main roof. When the area of a pent house exceeds 2,500 sq. ft. the bottom of the tank shall be required to be not less than 20 feet above the highest line of sprinklers below the pent house roof, but where a pent house contains only pressure tanks this rule will not apply.

Where a tank capacity in excess of [25,000] 30,000 gallons is required by this rule, the amount of water to be provided in excess of [25,000] 30,000 gallons shall be specified by the Board of Standards and Appeals, except when tanks of unlimited capacities are supported on structures altogether independent of buildings.

The tank shall be filled through a fixed pipe, independent of the sprinkler piping, not less than two (2) inches in size, discharging into the top of the tank, or through a by-pass not less than two (2) inches in size around the check valve in the discharge pipe, provided the supply is of sufficient pressure to fill the tank. The water supply and connections shall be capable of supplying the tank at a rate of not less than sixty-five (65) gallons per minute.

The filling pipe shall be carried up inside a frost-proof casing and may extend through tank bottom to discharge at top of tank above full water level. The portion of pipe inside tank must be of brass or copper or other non-corrosive material.

Tanks shall not be fed through sprinkler lines.

The sprinkler and standpipe tanks may be fed from a common source of supply, either a pump or a direct service main connection, provided that there are separate feed mains from the basement or lowest story and a control valve in each feed line in a pump or engine room.

The overflow pipe shall be not less than two (2) inches in diameter for tanks up to 30,000 gallons capacity and not less than three (3) inches in diameter for larger tanks. The top of the overflow pipe shall be three (3) inches below the top of the staves in wooden tanks and one (1) inch from the top in steel tanks. The pipe may extend through the bottom of tank provided the portion inside tank is of brass or copper or other non-corrosive metal and without joints or it may extend through side of tank. For tanks over roofs overflow pipes shall terminate not more than twenty-four (24) inches above roof and shall be fitted with a 90 degree elbow.

The discharge, heating or filling pipes where exposed to the weather shall be protected from freezing by a frost-proof covering which may be of three layers of one-inch (1") hair felt interspersed with building paper well wrapped and secured and covered with canvas well painted or by frost-proof boxing as specified by the National Board of Fire Underwriters.

Easy access to top of each tank shall be provided by means of a steel gooseneck ladder substantially constructed and rigidly braced, the top of which shall not tip outward from the vertical at any point.

Tanks above roofs shall be constructed according to the requirements of the Building Code and supporting struc-

PUBLIC HEARING

tures shall be approved by the Superintendent of Buildings. Tanks not enclosed and exposed to the weather shall be covered with a double roof of acceptable construction consisting of a tight flat cover of matched boards and above this a conical roof which shall be covered with an approved roofing.

Where a gravity tank may supply both sprinklers and yard hydrants it shall not be of less than 30,000 gallons capacity and located on a structure altogether independent of buildings and the bottom shall not be less than 75 feet above the ground level, and not less than 20 feet above the highest line of sprinklers below the main roof of the highest building in a group of buildings.

Rule 6. Pressure Tank. Pressure tanks shall contain sufficient water to supply twelve and one-half per cent (12½%) of the number of sprinklers in the average protected fire area for twenty (20) minutes, but not less than [5,000] 3,000 gallons of water for a wet pipe system where supplemented by an auxiliary water supply, and not less than 5,000 gallons of water for a dry-pipe system. No single tank shall have a capacity greater than 9,000 gallons. The tank shall be kept two-thirds (2/3) full of water under a pressure of seventy-five (75) pounds per square inch, and shall be so proportioned and located that a pressure of not less than fifteen (15) pounds per square inch will be available on the highest line of sprinklers below the main roof when all the water has been discharged from the tank.

[The tank shall be placed either on the roof or in the highest sprinklered story.]

A pressure tank or tanks shall not be located below the highest line of sprinklers supplied by tank or tanks.

Where [a tank] the total capacity of the pressure tank supply is in excess of [25,000] 30,000 gallons as required by this rule, the amount of water to be provided in excess of [25,000] 30,000 gallons shall be specified by the Board of Standards and Appeals.

The water shall be supplied through a fixed pipe, independent of the sprinkler piping, not less than [two] one and one-half (1½) inches in size [with a one and one-quarter (1¼) inch connection to the tank], or through a by-pass not less than [two (2)] one and one-half (1½) inches in size around the check valve in the discharge pipe provided the supply is of sufficient pressure to fill the tank. The water supply and connections shall be capable of supplying the tank at a rate of not less than sixty-five (65) gallons per minute without reducing the pressure in the tank. The tank shall have a fixed metallic horizontal line on the end opposite the glass gauge, or other acceptable device, to indicate the level of the water when the tank is two-thirds full.

The air compressor shall be of sufficient capacity to increase the air pressure at the average rate of one (1) pound in two minutes in each pressure tank.

Rule 7. Public Water System. Direct connection to the city water supply shall be capable of furnishing water at not less than fifteen (15) pounds per square inch static pressure at the highest line of sprinklers under the main roof.

Subject to the requirements of the Department of Water Supply, Gas and Electricity, the size of each connection shall be as large as that of the main riser and not less than four (4) inches, and shall have a conveniently accessible control valve fixed to it at, or near, the curb, or, when possible, still further away from the building. The control valve shall be fitted with a frost and waterproof box, not less than four (4) feet nor more than six (6) feet below the curb, with a fixed stem extending to a compartment at the level of the sidewalk. The cover shall be bolted to the casing and shall be so marked as to be quickly located and to indicate the purpose of the valve. The valve shall be of indicating pattern, operated by a special socket wrench approved by the department of water supply, gas and electricity.

Where it is impractical to install a control valve box at the curb because of a vault under the sidewalk and within 18" thereof, the control valve may be located in the water supply connection at a point not more than two (2) feet from the point of entry into a vault.

Where a water meter is required in the water supply connection to an automatic sprinkler equipment, it shall be of a type which allows free flow of water and approved by the Department of Water Supply, Gas and Electricity, or a type of fire line meter which has been specifically approved by the Fire Commissioner for use in connection with fire extinguishing equipment.

Evidence establishing the fact that water supply conditions and pressures are as may be required shall be submitted to the Fire Department.

Rule 8. Fire Pump. An automatic electric fire pump as an automatic source of water supply is one approved for such use and controlled by an approved automatic controlling device, which shall be adjusted to maintain not less than 15 pounds water pressure at the highest sprinkler below main roof and in pent houses over 2,500 sq. ft., as provided in Rule 5. And shall receive water supply only from a direct connection to the city water main.

As auxiliary sources of water supply steam or electric standard fire pumps shall receive water supply from a suction tank, a direct connection to the city water main or other approved sources capable of supplying the pump at its rated capacity for sixty (60) minutes. The rated capacity of the pump shall be not less than five hundred (500) gallons per minute, and shall be sufficient to supply twenty-five per cent (25%) of the number of sprinklers in the average protected fire area.

The pump shall be located in a room of fireproof construction, properly ventilated, lighted and drained, enclosed in eight (8) inch brick or concrete walls with approved fire doors at openings and with fireproof floor and ceiling construction. If located in the lowest story of the building, the pump shall be placed on a foundation not less than one (1) foot in height. The pump room shall be readily accessible with safe egress for the attendant.

A reliable source of energy for driving the pump shall be provided. For steam pumps, provision shall be made for sufficient steam power to operate the pumps at full rated capacity, and a steam pressure of not less than fifty (50) pounds shall be maintained at the pump at all times. Where there is more than one boiler, the pipes and valves shall be so arranged to permit the cutting out of any one boiler without interrupting the steam supply to the pump from the other boilers. The boiler room shall be cut off from the remainder of the building by fireproof floor and wall construction with approved fire doors at all openings.

Electrical energy from a public service plant shall be acceptable as a source of energy for driving electric fire pumps. When local power plants supply the energy for operating electric pumps, two motor generator units shall be provided, or one generator unit supplemented by a public service break-down switch. Local electric power plants shall be located in rooms of fireproof construction with approved fire doors at openings.

Rule 9. Sprinkler Discharge. For the purpose of computing the capacity of water supplies, standard one-half (½) inch sprinkler heads shall be assumed to have an average discharge of twenty (20) gallons per minute, and the discharge of larger heads shall be computed proportionately in the ratio of the areas of their respective orifices.

Rule 10. Fire Area. A fire area is any floor space enclosed on all sides by exterior walls or fire walls or a combination of both. The number of sprinklers in the average protected fire area shall be determined by the number of sprinklered stories in such section. In

PUBLIC HEARING

determining the required capacity of water supplies, the number of sprinklers in the average protected fire area need not include those located in low positions, such as under benches, low shelves, closets and platforms and between cars in car barns.

Rule 11. Fire Department Connection. All automatic sprinkler systems shall be provided with at least one two-way Siamese connection on each street front of the building for connection to the fire department hose. Buildings fronting on only one street shall be provided with at least two Siamese connections when the street frontage of building exceeds [one hundred and fifty (150)] two hundred (200) feet [in width].

Where buildings have frontages on more than one street there shall be a fire department connection on each street front where frontage is not continuous but in all cases where more than one fire department connection is required they shall be located as the Fire Commissioner may direct and shall not be grouped.

All Siamese hose connections hereafter installed, except those on piers or warehouses intended for fire boat use, shall be three (3) inches in size. Fire boat connections shall be three and one-half (3½) inches in size. All hose connections shall be female, with standard fire department threads.

The inlets shall be placed at least eighteen (18) inches and not more than two (2) feet above the sidewalk, in a horizontal position accessible to the fire department, and shall be provided with a four (4) inch discharge connecting with a four (4) inch pipe to the sprinkler system for three (3) inch fire department connection and with a six (6) inch discharge outlet and six (6) inch pipe for three and one-half (3½) inch fire boat connection. Each inlet shall be provided with a clapper valve machined to a true face.

Each Siamese connection shall be designated by raised letters at least one (1) inch in size, cast in the fitting in a clear and prominent manner and reading for the service designated, viz.: "Base. Spkr.," etc., as the case may be. If the entire building is sprinklered, the fitting shall be marked "Auto. Spkr."

Siamese hose connections may project through a street wall not more than twelve (12) inches beyond the building line except that where there is an angle formed by the street wall and a check piece or the base of a column, pilaster or ornamental projection, they may be so located that no part extends more than fifteen (15) inches from either side of such angle in accordance with the provisions of the Building Code.

In each fire department connection there shall be an approved straightway check valve installed in a horizontal position, unless suitably designed for vertical position, and the piping shall be arranged to drain between the check valve and the outside siamese coupling by either a ball drip having a one-half (½) inch pipe connection and one-half (½) inch orifice and a bronze ball of proper size, or by a three-quarter (¾) inch drip connection, with plugged valve attached, and when necessary arranged to drain to a sewer. A drain connection may be tapped into the body of check valve only when located in a horizontal position.

Rule 12. Automatic Sprinkler Systems. Automatic sprinkler systems shall be classified as:

(a) One Source Systems, supplied with water from any one of the automatic sources; and

(b) Two Source Systems, supplied with water from a combination of any two of the automatic sources; two pressure tanks with a total water capacity twice that required for a one source supply; direct connection to the city water supply on two different streets, so located that the closing of the controlling valve on one main will not eliminate the main on the other street; or a direct connection to the city water supply and one of the auxiliary sources provided the water supply main is at least six (6) inches in size, the main is fed both

ways and a two (2) inch test pipe at the top of the sprinkler riser shows a flowing pressure of fifteen (15) pounds per square inch between the hours of six a. m. to six p. m.

A gravity tank and pressure tank, or a gravity tank or pressure tank and one of the automatic sources or two pressure tanks having a total water capacity for a one-source supply may be considered as a two-source supply where the occupancy of the building does not conflict with Rules 38, 39 and 40 hereinafter provided for.

Rule 13. Sprinkler Spacing. Sprinkler heads and lines shall be spaced as herein provided:

Mill Construction. Under mill ceiling (smooth solid plank and timber construction, 5 to 12 foot bays) one line of sprinklers shall be placed in the center of each bay and the distance between the heads on each line shall not exceed the following:

(a) For Standard one-half (½) inch heads—

8 feet in 12 foot bays;
9 feet in 11 foot bays;
10 feet in 10 foot bays;
11 feet in 9 foot bays;
12 feet in 5 to 8 foot bays;

(b) For Conran* one (1) inch heads—

20 feet in 5 to 12 foot bays.

(c) For Conran* one and one-quarter (1¼) inch heads—

25 feet in 5 to 12 foot bays.

(d) Vaults used for the storage of nitro-cellulose products and vaults used for the storage of inflammable motion picture films shall have one standard one-half (½) inch head for each 62½ cubic feet of available storage space, or one (1) inch Conran* head for each 250 cubic feet of available storage space.

Measurements shall be taken from center to center of timbers.

Ceilings of modified mill construction having bays less than three (3) feet wide shall be treated as open joist construction and sprinkler heads and lines spaced accordingly.

Bay timbers spaced three (3) feet or more on centers, but less than five (5) feet on centers, will require special ruling by the administrative official having jurisdiction.

Joisted Construction. Under open finish joisted construction ceilings, floor, decks and roofs, the sprinkler lines shall be run at right angles to the joists and the heads "Staggered spaced" so that heads on one line will be opposite a point half way between heads on adjacent lines.

(a) For Standard one-half (½) inch heads the distance between lines of sprinklers shall not exceed ten (10) feet, and the distance between heads on each line shall not exceed eight (8) feet, the end heads on alternate lines being spaced not more than two (2) feet from wall or partition. Permission may be given by the administrative official having jurisdiction to install but one line of sprinklers, in each bay where girders project below the under side of joists and divide the ceiling into bays ten (10) to eleven and one-half (11½) feet wide from center to center of girders, and the heads shall then be spaced on each line so that the area covered by a single head does not exceed eighty (80) square feet. In all cases where such bays are over eleven and one-half (11½) feet wide, two or more lines of sprinklers shall be installed in each bay as required by the rules for spacing.

*Wherever the term "Conran head" is used in these Rules, it is to be taken as meaning either a Conran head of the type tested and approved by the Fire Department, or one that has passed similar tests by the Fire Department.

PUBLIC HEARING

Where girders and joists are flush at the bottom, heads shall be spaced according to the general rule.

(b) For Conran* one (1) inch heads the distance between adjacent lines shall not exceed twenty (20) feet and the distance between the heads on each line shall not exceed sixteen (16) feet, the end heads on alternate lines being spaced not more than four (4) feet from wall or partition. Where girders project below the under side of joists and divide the ceiling into bays not exceeding twenty (20) feet in width, measured from center to center of girders, one line shall be placed in the center of each bay. In bays exceeding twenty (20) feet in width at least two (2) lines shall be installed in each bay and in no case shall the distance between adjacent lines exceed twenty (20) feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads the distance between adjacent lines shall not exceed twenty-five (25) feet and the distance between the head on each line shall not exceed twenty (20) feet, the end head on alternate lines being spaced not more than five (5) feet from wall or partition. Where girders project below the under side of joists and divide the ceiling into bays not exceeding twenty-five (25) feet in width, measured from center to center of girders, one line shall be placed in the center of each bay. In bays exceeding twenty-five (25) feet in width at least two (2) lines shall be installed in each bay, and in no case shall the distance between adjacent lines exceed twenty-five (25) feet.

Smooth Finish, Sheathed or Plastered Ceilings. Under smooth finish, sheathed or plastered ceilings, in bays six (6) feet wide and over (measurements to be taken from center to center of timber, girder or other projection or support forming the bay), sprinkler heads and lines shall be spaced as follows:

(a) For standard one-half ($\frac{1}{2}$) inch heads—

One line of sprinklers shall be placed in the center of each bay for bays not exceeding twelve (12) feet in width, and the distance between the heads on each line shall not exceed the following:

- 8 feet in 12 foot bays;
- 9 feet in 11 foot bays;
- 10 feet in 6 to 10 foot bays.

Bays in excess of twelve (12) feet in width and less than twenty-three (23) feet in width, shall contain at least two (2) lines of sprinklers; bays twenty-three (23) feet in width or over shall have the lines therein not over ten (10) feet apart. In bays in excess of twelve (12) feet in width, not more than one hundred (100) square feet of ceiling area shall be allotted to any single head.

(b) For Conran* one (1) inch heads—

One line of sprinklers shall be placed in the center of each bay for bays not exceeding twenty (20) feet in width, and the distance between the heads on each line shall not exceed twenty (20) feet. Bays in excess of twenty (20) feet in width shall contain at least two (2) lines and in no case shall the distance between adjacent lines exceed twenty (20) feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads—

One line of sprinklers shall be placed in the center of each bay for bays not exceeding twenty-five (25) feet in width and the distance between the heads on each line shall not exceed twenty-five (25) feet. Bays in excess of twenty-five (25) feet in width shall contain at least two (2) lines and in no case shall the distance between adjacent lines exceed twenty-five (25) feet.

Fireproof Construction. The rules of slow-burning mill construction shall apply as far as practicable. The rule may be modified, however, the intent being to arrange the spacing of heads to protect the contents rather than the ceilings; but in no case shall the distance between a head on one line and a head on an adjacent line exceed the following:

(a) For standard one-half ($\frac{1}{2}$) inch heads, 12 feet.

(b) For Conran one (1) inch heads, 20 feet.

(c) For Conran one and one-quarter ($1\frac{1}{4}$) inch heads, 25 feet.

Distance From Walls. The distance from wall or partition to the first head on a sprinkler line shall not exceed one-half the allowable distance between the heads on such line. Additional heads may be required in the narrow pockets formed by bay timbers or beams and wall. Where beams, girders, columns, walls, partitions or other obstructions prevent the effective discharge of water, additional heads shall be installed to effectively sprinkle the area.

Vertical Shafts. In vertical shafts having inflammable sides, heads shall be provided within the shaft in addition to the head or heads at the tops of shafts, as follows:

(a) One standard one-half ($\frac{1}{2}$) inch head for each 200 square feet of inflammable surface.

(b) One Conran* one (1) inch head for each 400 square feet of inflammable surface.

(c) One Conran* one and one-quarter ($1\frac{1}{4}$) inch head for each 500 square feet of inflammable surface.

Such head or heads shall be installed at each floor when practicable, and always when shaft is trapped. Where practicable, heads shall be "staggered" at the alternate floor levels, particularly when only one head is installed at each floor level.

Pitched Roofs. Under a pitched roof sloping more steeply than one (1) foot in three (3) feet, heads shall be located in peak of roof, and those on either side of the peak shall be spaced according to the foregoing requirements. The distance between heads shall be measured on a line parallel with the roof. Where the roof meets the side wall or the floor line, the heads shall be placed not more than the following distance from such intersection:

(a) For standard one-half ($\frac{1}{2}$) inch heads, $3\frac{1}{2}$ feet.

(b) For Conran* one (1) inch heads, 7 feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, $8\frac{1}{2}$ feet.

Heads spaced not to exceed the following distance each way from the peak of roof, measured on a line parallel with the roof, may be used in lieu of heads located in peak of roof:

(a) For standard one-half ($\frac{1}{2}$) inch heads, $2\frac{1}{2}$ feet.

(b) For Conran* one (1) inch heads, 5 feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, $6\frac{1}{4}$ feet

In sawtooth roof construction, the end heads on the branch line shall be spaced not to exceed the following distance from the peak of the sawtooth:

(a) For standard one-half ($\frac{1}{2}$) inch heads, $2\frac{1}{2}$ feet.

(b) For Conran* one (1) inch heads, 5 feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, $6\frac{1}{4}$ feet.

Special Locations and Variations. In special locations, such as over electric generating, power and transforming apparatus, over their controlling devices and switchboards, where water from the fire extinguishing equipment would be detrimental, the sprinkler lines and heads may be omitted at the discretion of the administrative official having jurisdiction, and when in his judgment a slight variation of this rule of spacing is desirable to effect a more efficient distribution of water for fire extinguishing purposes, the sprinkler lines and heads shall be spaced as he may direct.

Rule 14. Sprinkler Position. All sprinkler heads shall be located, wherever possible, in an upright position on top of the pipes, except that sprinkler heads on automatic wet pipe systems may be pendant on concealed piping and when construction or occupancy of a room or enclosure makes it preferable.

(a) Where standard one-half ($\frac{1}{2}$) inch heads are installed sprinkler deflectors shall be parallel to ceilings, roofs or the

PUBLIC HEARING

incline of stairs, but when installed in the peak of a pitched roof they shall be horizontal. Distance of deflectors from ceilings of mill or other smooth construction, or bottom of joists of open joist construction, shall be not less than three (3) inches nor more than ten (10) inches.

In fireproof buildings, the distance between deflectors and panel ceilings shall not exceed fifteen (15) inches.

Not less than eighteen (18) inches effective clear space shall be left below the sprinkler heads, so that they may discharge an unbroken spray blanket from sprinkler to sprinkler and sides of room when in operation. Any stock piles, racks or other obstructions interfering with such action shall not be permitted. *Sprinkler system piping shall not be used for the support of stock, clothing, etc.*

(b) Where Conran* heads are installed, the top of head shall be located the same distance below joists or ceiling as specified for deflectors in paragraph (a) of this rule; except that when heads are located under pitched roofs of piers or similar structures, they shall in general be installed in the upright position (not normal to slope of roof) and three (3) feet vertically below the underside of roof. When the administrative official having jurisdiction deems a variation of this rule advisable to obtain a more efficient distribution of water, the heads shall be located with respect to joists or ceiling, as he may direct.

Rule 15. Pipe Sizes. The number of heads on a given size pipe in one fire area in any story shall not exceed the following:

(a) For standard one-half (1/2) inch heads—

Size of Pipe	Maximum No. of Heads Allowed
3/4 inch	1 head
1 " "	2 heads
1 1/4 " "	3 " "
1 1/2 " "	5 " "
2 " "	10 " "
2 1/2 " "	20 " "
3 " "	36 " "
3 1/2 " "	55 " "
4 " "	80 " "
5 " "	140 " "
6 " "	200 " "
7 " "	300 " "
8 " "	420 " "

(b) For Conran* one (1) inch heads—

Size of Pipe	Maximum No. of Heads Allowed
1 inch	1 head
1 1/4 " "	2 heads
1 1/2 " "	3 " "
2 " "	4 " "
2 1/2 " "	6 " "
3 " "	9 " "
4 " "	18 " "
5 " "	34 " "
6 " "	51 " "
7 " "	75 " "
8 " "	105 " "

(c) For Conran* one and one-quarter (1 1/4) inch heads—

Size of Pipe	Maximum No. of Heads Allowed
1 1/4 inch	1 head
1 1/2 " "	2 heads
2 " "	3 " "
2 1/2 " "	4 " "
3 " "	6 " "
4 " "	12 " "
5 " "	21 " "
6 " "	40 " "
7 " "	60 " "
8 " "	84 " "

When it is desired to use pipe of larger size than eight (8) inches in diameter, special ruling will be required by the administrative official having jurisdiction as to the permissibility of its use and the number of heads that may be fed thereby.

Where practicable, it is desirable to arrange the piping so that the number of heads on a branch line will not exceed eight.

When the piping is arranged on the "gridiron" plan, the permissible number of heads may be doubled, provided the feed main is of the size indicated in the schedule for the total number of heads.

Where feed mains supply branch lines of only two heads each, the conditions approach those of long single lines. Such feed mains shall usually be centrally supplied where there are over eight (8) or ten (10) branch lines. Branch lines up to fourteen (14) in number may be fed from end provided a two and one-half (2 1/2) inch pipe does not supply more than sixteen (16) standard one-half (1/2) inch heads in lieu of twenty (20).

Buildings having slatted floors, or large unprotected floor openings without approved stops, shall be treated as one room with reference to the pipe sizes, and the feed main shall be of sufficient size to accommodate the number of heads called for. Larger pipe sizes than are allowed in the schedule for a given number of heads may be required wherever the construction or conditions introduce unusually long runs of feed mains or many angles. Buildings with blind attics with small unprotected openings to floor below, may be piped from the system on the ceiling of floor below, provided pipe size schedule is not overloaded on sizes three (3) inches or under.

Rule 16. Feed Mains. The size of feed mains shall not be less than the size of riser and shall be arranged to run as direct as possible from source of water supply to riser.

Feed mains for stair or other towers without approved stops between floors, when piped on independent riser, shall be of sufficient size to accommodate the total number of sprinklers in such tower.

Rule 17. Risers. There shall be one or more separate risers in each building and in each section of the building divided by fire walls. Risers shall be arranged to provide "Center Central" or "Side Central" supply to feed main. Each riser shall be of sufficient size to supply all the heads on said riser in one story, according to the schedule of pipe sizes in Rule 15.

In buildings of fireproof construction, and for the purposes of this rule, a blank wall, or one in which the openings are protected by standard fire doors, may be considered as a fire wall, if of equivalent construction.

If the conditions warrant, special permission will be granted allowing the heads in a fire section of small area to be fed from the risers in another section, provided the total number of heads in such area does not exceed the following number per floor:

(a) For standard one-half (1/2) inch heads, 48.

(b) For Conran* one (1) inch heads, 12.

(c) For Conran* one and one-quarter (1 1/4) inch heads, 8

Risers shall not be located close to windows, properly protected from mechanical injury and freezing and shall be properly supported on foundations and by floor plates, clamps, couplings or hangers.

No connections, such as for sill cocks, house service or hose outlets, shall be made with a sprinkler system riser or any part thereof.

Where gravity and pressure tanks feed through a common discharge pipe or "dead riser" to the foot of a riser and an air lock is likely to develop the discharge pipe of the gravity tank shall connect with the discharge pipe, or "dead riser" forty (40) feet below the bottom of the pressure tank.

PUBLIC HEARING

Rule 18. Pipes and Fittings. All pipe shall be full-weight standard wrought iron or steel threaded pipe, well reamed and screwed up tight into fittings without reducing the waterway. Fittings shall be standard cast iron fittings, and shall be long turn pattern on feed mains and risers.

Such fittings shall be designed and guaranteed for a working pressure of 150 pounds per square inch and must be capable of withstanding a hydrostatic test pressure of 750 pounds per square inch without failure.

All pipe shall be secured to the ceiling, walls and other parts of the building with standard steel, wrought or malleable iron hangers.

Extra heavy fittings shall be employed where the normal pressure in the pipe system exceeds one hundred and fifty (150) pounds per square inch, and shall be designed for a working pressure of 250 pounds per square inch and be capable of withstanding a hydrostatic test pressure of 1,250 pounds per square inch without failure.

All underground pipe shall comply with the specifications for cast iron pipe of the American Water Works Association.

Rule 19. Protection of Pipes and Sprinklers. When exposed to moisture, sprinkler pipes and hangers shall be protected against corrosion whenever found necessary by thoroughly cleaning the pipe of all scale and grease and painting with a coat of red lead and linseed oil paint or other acceptable moisture resistive paint. When exposed to chemical fumes, the pipe and fittings shall be coated with graphite or other approved chemical resistive paint. Care shall be taken not to paint the sprinkler heads.

Supply pipes of risers in low basements or low spaces under ground floors exposed to frost, shall be properly protected by a masonry or wood enclosure, properly heated, or filled with mineral wool, sawdust or tar mixed with granulated cork, extending below bottom of pipe and through the top flooring of ground floor, or the pipe shall be protected with three alternate layers of one-inch hair felt and building paper or by other approved method. When of wood, such enclosure shall be constructed double with a layer of tar paper between the two thicknesses of wood.

Where risers, drains, heating pipes, etc., pass through cinder concrete floors or partitions, they shall be protected with a metal sleeve or be grouted with cement mortar.

Wherever sprinklers are exposed to corrosion, the heads shall be protected with an approved hermetically sealed cover, or with an approved wax coating.

Rule 20. Drainage. All sprinkler pipe and fittings shall be so installed that they can be thoroughly drained, and where practicable, all piping shall be arranged to drain at the main drips.

Drains or drip pipes shall be so arranged as not to expose any part of the sprinkler system to frost, and shall be so connected, either by check valves or other means, that they will not [overthrow] overflow domestic service or other connections to the same sewer or house drain, or if carried through the wall and exposed to the weather, they shall be fitted with hoods or down-turned elbows.

Drains, pitched not less than one-quarter ($\frac{1}{4}$) inch in ten (10) feet, shall be installed:

- At the base of the main riser;
- At each alarm valve;
- At each dry-pipe valve;
- At each gravity tank;
- At each pressure tank;
- At each fire department connection;

On each floor, if independent floor control valves are used; and

At each supply main, when the water in the same cannot be removed through any of the above drains. Such drains shall be installed with controlling valves so that flowing tests may be made to determine if the water supplies or connections from yard mains to the inside of the build-

ing are in order without causing water damage or overflowing service connections to the same house drain. Any such drain shall be not less than two (2) inches in size except that drains at independent floor valves [may be one and one-quarter ($1\frac{1}{4}$) inches in size] shall be not less than 1 inch in size where floor valves are not over $2\frac{1}{2}$ inches in size and $1\frac{1}{4}$ inches where floor valves are larger, and connected to a main drain riser of not less than $1\frac{1}{2}$ inches in size. The drain at the main riser shall discharge into a cone or sight drain, or if carried through the wall and exposed to the weather, it shall be fitted with a hood or down-turned elbow.

At an alarm valve at the top of a riser in a down-fed system a drain shall not be required.

At each gravity or pressure tank erected above roof of a building there shall be a 4-inch valved drain connection so arranged as to discharge on roof of building. And where a tank is on a separate structure altogether independent of buildings drain connection to be arranged to discharge at ground level.

On automatic wet pipe systems, the horizontal branch pipes shall be pitched not less than one-quarter ($\frac{1}{4}$) inch in ten (10) feet to drain towards the sources of supply with drip valves at the low points.

On automatic dry-pipe systems, branch pipes shall be pitched at least one-half ($\frac{1}{2}$) inch in ten (10) feet.

Rule 21. Test Pipe. [On] In all wet-pipe automatic sprinkler systems a test pipe of not less than $\frac{3}{4}$ inch in diameter shall be connected directly with each [riser] system but shall be connected to a pipe of not less than $1\frac{3}{4}$ inches in diameter in upper story and arranged to discharge, through a $\frac{1}{2}$ -inch brass outlet, preferably to a point where it can readily be seen. With long runs or many angles, size of test pipe [shall] should be increased to one (1) inch or larger. Controlling valve should be located at a sufficient distance from where the test pipe passes through the wall of the building so as to reduce to a minimum the chance of freezing of water in test pipe.

In all dry-pipe automatic sprinkler systems a $\frac{3}{4}$ -inch inspector's test pipe shall be installed at the end of the most distant branch line and fitted with a $\frac{3}{4}$ -inch shut-off valve stopped with a brass plug.

Rule 22. Pressure Gauges. A four and one-half ($4\frac{1}{2}$) inch double-spring Bourdon pressure gauge shall be provided in all automatic sprinkler systems as follows:

- Above dry-pipe valves;
- Below dry-pipe valves;
- At the pressure tank;
- At the air compressor;
- Above the alarm valve;
- Below the alarm valve; and

In the connections from city water supply.

Provision may be made for taking the pressure both above and below the alarm valve and the dry-pipe valve with only one gauge at each valve.

A gauge shall not be required at an alarm valve located at the top of a riser in a down-fed system.

Gauge connections shall be taken from the supply main or riser and not from the two-inch drain or test pipe.

Gauges shall be installed in a suitable place protected from freezing and be controlled by a valve with arrangements for draining. A plugged outlet, not less than one-quarter ($\frac{1}{4}$) inch in size, shall be located between each valve and gauge for purpose of installing the inspector's gauge.

Rule 23. Valves. All valves two (2) inches in diameter and under shall be of brass or bronze, or other approved [non-corrodible] non-corrosive material. Valves over two (2) inches in diameter shall be of brass, or bronze or iron body, brass mounted, or of other approved [non-corrodible] non-corrosive material.

All sidewalk Siamese inlet valves, caps and chains shall be of galvanized cast iron or other approved [non-corrodible] non-corrosive material.

PUBLIC HEARING

All gate valves shall be solid or double wedge disc, suffing box pattern with hand wheel, outside screw and yoke, or other approved indicator pattern.

All check valves shall be approved straight way regrinding pattern, so built that the clappers may be readily removed for repairs.

Rule 24. Water Supply Gate Valves. The piping connecting each source of water supply with the sprinkler system shall be provided with a gate valve of the outside screw and yoke type, sealed open and tagged to designate its purpose, so located as to control each source of water supply except that from fire department hose connections. All such gate valves shall be located within the building where easily visible and readily accessible and as close as possible to the supply inlet.

Rule 25. Water Supply Check Valves. The piping connecting each source of water supply with the sprinkler system, including fire department connections, shall be provided with a check valve.

On two-source systems, check valves shall have a gate valve on each side to permit repair of check without shutting off both supplies, except that where the two sources of supply consist of tanks located above the highest line of sprinklers, a gate valve need only be provided on the downstream side of each check valve.

Rule 26. Control Valves. All automatic sprinkler systems shall be provided with a main control or shutoff valve arranged to be readily accessible and sealed in the open position; except that when the sprinkler system is fed from water supplies on the roof of the building, independent and readily accessible floor control valves, sealed in the open position, may be installed.

When not more than ten (10) standard one-half ($\frac{1}{2}$) inch sprinkler heads or three (3) Conran* heads in any automatic wet pipe system are exposed to cold and subject to freezing, shutoff valves may be provided to discontinue the water supply to such heads between November 1 and April 1. A greater number of heads than specified above, located in places which cannot be properly heated, shall be controlled by an automatic dry-pipe valve.

Rule 27. Dry-Pipe Valves. A dry-pipe valve shall be taken to mean a valve automatically controlling the water supply of the sprinkler system in such a manner that under normal conditions its piping system beyond the valve is maintained dry, but in the event of fire, the valve automatically releases the water into the sprinkler system, for fire extinguishing purposes.

Dry-pipe valves shall, for the purpose of these rules, be classified as follows:

Type A, in which the valve is actuated by the release of compressed air in the sprinkler piping system, due to the opening of a sprinkler head; and

Type B, in which the valve is actuated by an approved trip under electric control of an approved automatic thermostatic fire alarm system.

Dry-pipe valves shall be located as near as practicable to the sprinkler system in an enclosed and accessible place protected from mechanical injury and freezing.

When anti-columning pipes are used, they shall be either lead lined or of brass.

Automatic wet-pipe sprinkler systems in which only twenty-five (25) per cent of the heads are required to be maintained dry for protection from freezing, shall have only such heads under dry-pipe valve control.

(a) When "Type A" valve is installed, the air pressure in sprinkler systems under such dry-pipe valve control shall not exceed forty (40) pounds per square inch, nor be permitted to fall below twenty-five (25) pounds per square inch, nor shall it be less than one-sixth ($\frac{1}{6}$) of the water pressure in any case.

The air compressor shall have a capacity of not less than eleven (11) cubic feet per minute and the air supply for the pump shall be taken, if possible, from a room containing dry air, or it shall be passed through a drying chamber containing calcium chloride, in order to avoid the introduction of moisture into the system.

The air pressure on such dry-pipe systems shall be maintained throughout the year.

Not more than the following number of heads shall be controlled by one "Type A" dry-pipe valve:

- (a) For standard one-half ($\frac{1}{2}$) inch heads400
- (b) For Conran* one (1) inch heads100
- (c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads 64

Where equipped with an approved quick-opening device the following number of heads may be controlled by one "Type A" dry-pipe valve:

- (a) For Standard one-half ($\frac{1}{2}$) inch heads800
- (b) For Conran* one (1) inch heads200
- (c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads.128

(b) When "Type B" valve is installed the actuating alarm system shall be designed to operate at a temperature lower than that required to open the sprinkler heads, and all connections between the alarm system and the dry-pipe valve shall be adequately protected against injury of any kind.

When required by the administrative official having jurisdiction, the dead end of every feed main in such dry-pipe system shall be provided with an air relief valve or vent, so constructed as to be normally open in order to permit the free escape of air from the system, but to close automatically against the escape of water.

Not more than the following number of heads shall be controlled by one "Type B" dry-pipe valve:

- (a) For Standard one-half ($\frac{1}{2}$) inch heads500
- (b) For Conran* one (1) inch heads125
- (c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads. 84

Rule 28. Alarm Valve. All automatic wet pipe sprinkler systems shall be equipped with an alarm valve so constructed that a flow of water through a one-half ($\frac{1}{2}$) inch orifice will operate an electric or mechanical gong.

Dry pipe valves shall be equipped with a reliable device to give either an electrical or mechanical alarm.

Rule 29. High and Low Water and Pressure Alarm. All gravity tanks shall be equipped with a device to indicate when the water falls below or rises above the normal level in the tank, with an indicator or alarm located in the engineer's room near the pump.

All pressure tanks shall be equipped with a device to indicate when the pressure in the tank falls below seventy (70) or rises above eighty (80) pounds per square inch with an indicator or alarm located in the engineer's room [near the compressor].

Rule 30. Heating of Tanks. The water in all sprinkler tanks subject to freezing shall be protected by internally heating the water or enclosing the tank in a frost-proof house properly heated and lighted.

Rule 31. Concealed Pipe Systems. All pipe in concealed pipe systems shall be of standard full-weight wrought iron or steel, painted with two coats of protective paint, one before and one after installation. Such pipe shall be installed in ducts or be encased in cement mortar and shall be inspected prior to concealment. When installed in the concealed space between floor arches and ceiling, such pipe shall be supported by hangers and all pipe, fittings and hangers be protected with two coats of paint.

Rule 32. Preparation of Building. Floor or wall openings and other structural defects which prevent the banking up of heated air and retard the automatic action of sprinkler heads shall be provided with the necessary curtain boards and draft stops to permit specific control of the fire by the local sprinklers.

Curtain boards shall project at least three (3) inches below the lowest sprinkler.

PUBLIC HEARING

Rule 33. *Approval of Sprinkler System [Tests]. Before acceptance* all automatic sprinkler systems, excluding the water supply tanks, shall be subjected after installation to a hydrostatic pressure of a test of at least fifty (50) pounds per square inch in excess of that which will be normally carried and observed in the sprinkler system, such test pressure, however, never to be less than one hundred and fifty (150) pounds per square inch in any part of the system.

All pressure tanks shall be tested after erection to a test pressure of one and one-half ($1\frac{1}{2}$) times the working pressure. To prevent the possibility of serious water damage in case of a break, the pressure shall be maintained by a small pump, the main controlling gate being meanwhile kept shut. Brine or other corrosive chemicals shall not be used for testing systems.

In automatic dry-pipe systems with "Type A" valve control, an air pressure of forty (40) pounds per square inch shall be pumped up, be held for twenty-four (24) hours, and all leaks stopped which allow a loss of pressure of over two (2) pounds per square inch for the twenty-four (24) hours.

In the case of automatic dry-pipe systems with differential "Type A" valve, the valve shall be held off its seat during the test to prevent injuring the valve.

Non-automatic systems shall be tested after installation at not less than fifty (50) pounds per square inch in excess of the pressure necessary to reach the highest line of sprinklers.

All tests of installed systems shall be made by the contractor in the presence of the Fire Commissioner, or his authorized representative.

No piping, devices nor any portion of a newly constructed sprinkler system shall be covered up or permanently concealed until tested by the Bureau of Fire Prevention and approved of in writing, except piping passing through floors, walls, partitions or beams for distances equal to the thickness of such floors, walls, partitions or beams.

Rule 34. *Non-fireproof Business Buildings.* Automatic sprinklers required in non-fireproof business buildings under the provisions of Chapter 5, Article 4, Section 72, Code of Ordinances, unless otherwise specifically provided in these rules, shall consist of at least a One Source System.

Rule 35. *Dangerous or Hazardous Buildings.* Automatic sprinklers required in buildings having occupancies considered to be dangerous or hazardous by the Fire Commissioner shall consist of at least a one-source system unless otherwise specifically provided for in these rules.

Rule 36. *Factories and other Buildings.* Automatic sprinklers required in buildings under the provisions of the Code of Ordinances and the Labor Law shall consist of at least a one-source system.

Rule [35] 37. *Theatre Buildings.* Automatic sprinklers required in theatre buildings under the provisions of Chapter 5, Article 25, Section 524, Code of Ordinances, shall consist of at least a One Source System.

Rule [36] 38. *Firework Storage.* Automatic sprinklers required in buildings in which fireworks are stored or sold under the provisions of Chapter 10, Article 6, Section 92, Code of Ordinances, shall consist of a Two Source System.

Rule [37] 39. *Nitro-Cellulose Products.* Automatic sprinklers as required in buildings in which nitro-cellulose products are stored under the provisions of Chapter 10, Article 19, Section 232, Code of Ordinances, shall consist of a system supplied from both approved gravity tank supply and an approved pressure tank supply, except that no change shall be required in supplies to automatic sprinkler equipments previously approved by the Fire Commissioner as two source systems, in conformity with the provisions of this rule as in force up to December 1, 1921.

In buildings wherein are stored or handled only limited quantities of nitro-cellulose products, not exceeding 500 pounds, the automatic sprinklers may consist of a two source system as provided for in Rule 12.

Rule [38] 40. *Inflammable Motion-Picture Films.* Automatic sprinklers, required in buildings in which inflammable motion-picture films are stored under the provisions of Chapter 10, Article 20, Section 241, Code of Ordinances, shall consist of a system supplied from both an approved gravity tank supply and an approved pressure tank supply except that no change shall be required in supplies to automatic sprinkler equipments previously approved by the Fire Commissioner as two source systems in conformity with the provisions of this rule as in force up to December 1st, 1921.

Rule [39] 41. *Existing Installations and Approvals.* Automatic extinguisher systems and devices heretofore approved and accepted by the authorities having jurisdiction shall not be required to conform to the provisions of these rules; and all such systems heretofore installed shall not be required to be altered to conform to these rules so long as the fire hazard due to construction and occupancy of the building is not increased or where substantial additions or extensions in height or area is made to the building when these rules shall apply if deemed advisable or necessary by the Fire Commissioner and the system after inspection is found to be in good working order.

Rule 42. *Communicating Openings.* When a building fully equipped with sprinklers communicates with another not so equipped the openings must be protected by approved fire doors on both sides of the wall, one of which must be automatic.

Rule 43. *Maintenance Inspections.* Automatic sprinkler systems shall be inspected at least once a month by the person in charge of the building, or by other competent person employed by the owner, to see that all parts of the system are in perfect working order, and the fire department connection or connections, if any, ready for immediate use by the Fire Department. A detailed record of each inspection shall be kept for examination by a representative of the Fire Department.

There shall be kept available at all times in the premises a supply of extra sprinklers, never less than six (6), to replace promptly any fused or damaged sprinklers. And there shall be one or more employes instructed in the maintenance of sprinkler system.

Rule 44. *Open Sprinklers.* When open sprinklers are required for exposure protection by the Fire Department as specified in the Building Code they shall be installed in accordance with the rules of the National Board of Fire Underwriters. Plans for such installation to be filed with the Fire Department for approval.

BOARD OF STANDARDS AND APPEALS.

APPEALS FROM ADMINISTRATIVE ORDERS.

The forty-eight pier cases listed herewith were laid over, pending decision by the Supreme Court on a test case.

PIER CASES.

- 480-19-A—Piers 4 and 5, North River, Manhattan.
- 481-19-A—Old Pier 3, North River, Manhattan.
- 594-19-A—Pier 8, North River, Manhattan.
- 595-19-A—Pier 44, East River, Manhattan.
- 877-19-A—Pier 14, North River, Manhattan.
- 878-19-A—Pier 15, North River, Manhattan.
- 879-19-A—Pier 15, North River, Manhattan.
- 880-19-A—Pier 28, East River, Manhattan.
- 881-19-A—Pier 1 (Old), North River, Manhattan.
- 882-19-A—Pier 27, North River, Manhattan.
- 883-19-A—Pier 29, North River, Manhattan.
- 884-19-A—Pier 30, North River, Manhattan.
- 885-19-A—Pier 78, North River, Manhattan.
- 886-19-A—Pier 42, North River, Manhattan.
- 890-19-A—Pier 70, East River, Manhattan.
- 937-19-A—Piers 37 and 38, East River, Manhattan.
- 948-19-A—Pier 121, foot of West 131st street, North River, Manhattan. (Order No. 95587-F.)
- 949-19-A—Pier 121, foot of West 131st street, North River, Manhattan. (Order No. 95586-F.)
- 950-19-A—Pier 121, foot of West 131st street, North River, Manhattan. (Order No. 95585-F.)
- 981-19-A—Piers 22-25, East River, Manhattan.
- 1003-19-A—Pier 28, North River, Manhattan.
- 31-20-A—Pier 13, East River, foot of Wall street, Manhattan.
- 265-20-A—Pier 46, East River, foot of Van Brunt street, Brooklyn.
- 266-20-A—Pier 39, East River, foot of Van Dyke street, Brooklyn.
- 267-20-A—Pier 31, East River, s. w. s. Atlantic Basin, Brooklyn.
- 268-20-A—Pier 36, East River, foot of Pioneer street, Brooklyn.
- 269-20-A—Pier 35, East River, n. e. s. Atlantic Basin, Brooklyn.
- 270-20-A—Pier 34, East River, foot of Hamilton street, Brooklyn.
- 271-20-A—Pier 27, East River, foot of Baltic street, Brooklyn.
- 272-20-A—Pier 17, East River, foot of Joralemon street, Brooklyn.
- 273-20-A—Pier 19, East River, foot of Clark street, Brooklyn.
- 318-20-A—Pier between North 4th and 5th streets, East River, Brooklyn.
- 352-20-A—Pier 3, Wallabout basin, foot of Washington and E streets, Brooklyn.
- 353-20-A—Pier 2, Wallabout basin, foot of Washington and F streets, Brooklyn.
- 383-20-A—Pier 20, East River Manhattan.
- 420-20-A—Pier 5, between Poplar and Middagh streets, Brooklyn.
- 421-20-A—Pier 22, foot of Atlantic avenue, Brooklyn.
- 422-20-A—Pier 29, foot of Harrison street, Brooklyn.

423-20-A—Pier 32, foot of Degraw street, Brooklyn.

471-20-A—Pier between North 4th and 5th streets, Brooklyn.

907-21-A—East side South street, foot of Dover street, Manhattan.

1205-21-A—Pier No. 21, East River, east side South street, foot of Dover street, Manhattan.

1302-21-A—Pier 15, East River, Manhattan.

1541-21-A—Pier 3, between Main and Dock streets, Brooklyn.

1542-21-A—Pier 3, between Main and Dock Streets, Brooklyn.

1543-21-A—Pier 2, between Main and Dock streets, Brooklyn.

1544-21-A—Pier 2, between Main and Dock streets, Brooklyn.

1545-21-A—Pier 2, between Main and Dock streets, Brooklyn.

- 26-25-SA—Keenan Brilliant Burner, approval of.
- 228-25-SA—Silent Glow Oil Burner, approval of.
- 242-25-SA—Derby Closed Circuit Automatic Sprinkler and Standpipe Supervisory Alarm Panel, approval of.
- 259-25-SA—Electrol Automatic Oil Burner.
- 340-25-SA—McCann-Harrison Low Pressure Oil Burner, approval of.

Cases listed in the Reserve Calendar are cases upon which action by the board has been deferred pending committee reports, of this board, court or department actions, and will remain thereon until the aforesaid reports, court or departmental actions are consummated. Whereupon the case or cases will be restored to the regular calendar and due notice of the date set for hearing will be mailed to the appellant, applicant or petitioner of record.

FORMS FOR NOTICES TO PROPERTY OWNERS

If applicants, under the building zone resolution, desire copies of Form 13A, for notices to property owners, such forms are not to be supplied by this office.

The applicant is entitled only to one copy of Form 13A, properly filled out.

If he desires additional copies for his own convenience in notifying property owners, he can obtain such copies from The O'Connell Press, 176 Park Row, Manhattan, at three cents each, postage to be added if the forms are to be supplied by mail.

WARNING.

Notice is hereby given to all petitioners, appellants and applicants for relief at the hands of the Board of Standards and Appeals, and to all lawyers, architects and engineers representing owners or lessees in proceedings before the board—

First, That if they do not appear in person or by representative at the hearing on their case, dismissal for lack of prosecution is likely to result.

Second, That due and ample notice of the date set for hearing is provided in the publication in this BULLETIN of the calendars of the board, each case being set down by Calendar Number and premises under the date of the hearing.

Third, That no plea of ignorance of the date of the hearing can be entertained in view of this publication and

of the posting of the calendars on the bulletin board in the offices of the board and of the further publication of the calendars in the daily press.

Fourth, That no one is entitled to written notice of the date for the hearing in his case, and that the plea of failure to receive such notice is no excuse for neglect to appear.

Fifth, That the business of the board is to dispose of all cases promptly, for the reason that the pendency of an appeal or petition ties the hands of the administrative official in enforcing his order; therefore, no appeal or petition will be allowed to be hung up by reason of failure of the appellant or petitioner to file necessary data, or by any other method of delay.

WILLIAM E. WALSH, Chairman

Commissioners

HENRY L. CONNELL

JOSEPH FLANAGAN

JOHN GUILFOYLE

FIRE CHIEF JOHN KENLON

JAMES O'CONNOR, Secretary

EDWARD V. BARTON, Chief Clerk

OFFICE—Municipal Building, Rooms 1001 to 1015.

TELEPHONE—Worth 0184.

OFFICE HOURS—9 a. m. to 5 p. m. Saturdays, 9 a. m. to 12 noon.

All communications should be addressed to the chairman of the board

CONTENTS

This issue of the Bulletin contains, in the order given—

Docket.

Call of Clerk's Calendar.

The Trial Calendar.

Special Notice.

Notices in Building Zone Cases.

Minutes of Meeting, October 6, 1925, at 10 a. m.

Minutes of Meeting, October 6, 1925, at 2 p. m.

Notice of Public Hearing.

Progress Report.

PUBLIC HEARINGS

Tuesdays, at 10 a. m. and 2:30 p. m.

Special meetings as published in this Bulletin.

Call of Clerk's Calendar, Tuesdays, at 2 p. m.

All hearings are held in Room 1013, Municipal Building, Manhattan.

HOURS FOR CONSULTATION.

10 A. M. to 1 P. M.

Any person desiring to consult the chairman or the engineers, pertaining to the work of the board, will be seen only between the hours of ten in the morning and one in the afternoon—Saturdays excepted.

CALL OF CLERK'S CALENDAR.

The Clerk's Calendar consists of applications under the Building Zone Resolution, and its object is to give interested property owners an opportunity to file objections, if any, and will be called in Room 1013, Tuesday, October 13, 1925, at 2 o'clock. At this call each case is set for hearing on a definite day.

The next subsequent Call of the Calendar will be on Tuesday, October 20, 1925, at 2 o'clock.

The Clerk's Calendar is not to be confused with the calendar of cases that have been definitely set for hearing on fixed days.

NOTICE TO APPELLANTS AND PETITIONERS.

No appeal, application or petition will be entertained in connection with which court proceedings are pending or in progress, nor accepted that are not filed within twenty days from the date of the action of the Administrative Official.

Any communication purporting to be an appeal, application or petition shall be regarded as a mere notice of intention to seek relief until it is filed on the form required by the rules of this board.

Upon receipt of any such communication the writer will be supplied with the official forms for presenting his appeal, application or petition, and if he fails to supply the data required thereon, within twenty days, his case may be dismissed for lack of prosecution.

At the time of filing an application, the appellant or petitioner shall forward a signed notice of appeal addressed to the administrative official (either superintendent of buildings or fire commissioner) and file with this board a duplicate of said notice.

Petitioners are advised that their plans must indicate the points of the compass so as to establish the true location and position of the property, the subject of the appeal.

Appeals, applications and petitions will be simplified and expedited by conforming to these directions.

WILLIAM E. WALSH, Chairman.

157-25-A.

APPELLANT—Croker National Fire Prevention Co., for Grand Rapids Show Case Co., lessee.

SUBJECT—Appeal from order of fire commissioner.

PREMISES AFFECTED—159 Nott avenue, Long Island City, Borough of Queens.

APPEARANCES—

For Appellant: Herman E. Horwood.

For Administration: Inspector Lynch of fire department.

ACTION OF BOARD—Appeal granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Commissioners Connell, Flanagan, Guilfoyle and Fire Chief Kenlon

Negative

Absent

THE RESOLUTION:

(157-25-A)

WHEREAS, Croker National Fire Prevention Engineering Co., for Grand Rapids Show Case Co., lessee, filed, February 5, 1925, an appeal, from an order of the fire commissioner, affecting premises 159 Nott avenue, Long Island City, Borough of Queens; and

WHEREAS, the order of the fire commissioner, dated December 6, 1924, reads:

"Install standpipe 4 in. in diameter, tested to withstand a pressure of 300 lbs. per square inch, extending from cellar to roof with necessary check valves and two and one-half inch regulation Fire Department outlets on each story, etc."; and

WHEREAS, the building is non-fireproof, one story in height, 200 ft. by 100 ft. in area. OCCUPIED: Storage of show cases and partitions; 12 persons in all; and

WHEREAS, the appellant claims his lease expires on February 1, 1927; that it would be a hardship if compelled to undergo this large expense; that there are fire hydrants easily accessible; he further contends there is no one on the premises except when material is being taken in or out; that there would be no one on the premises to operate the standpipes if they were installed, and requests the board to withhold the enforcement of this order until February 1, 1927.

Resolved, that the order of the fire commissioner be and it hereby is modified, and the appeal be and it hereby is granted on condition that the present occupancy and use shall be discontinued on or before February 1, 1927; that the rear and gable walls shall be unpierced throughout their entire height and length; and that a 10 ft. open, unencumbered court shall be maintained throughout the entire depth of the building at the westerly end of structure.

199-25-A.

APPELLANT—Croker National Fire Prevention Engineering Co., for Hooker Electrochemical Co., owner.

SUBJECT—Appeal from order of superintendent of buildings.

PREMISES AFFECTED—25 Pine street, Manhattan.

APPEARANCES—

For Appellant: Herman E. Horwood.

ACTION OF BOARD—Appeal granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Commissioners Connell and Flanagan and Fire Chief Kenlon

Negative: Commissioner Guilfoyle

Absent

THE RESOLUTION:

(199-25-A)

WHEREAS, Croker National Fire Prevention Engineering Company for Hooker Electrochemical Company, owner, filed, February 18, 1925, an appeal, from an order of the superintendent of buildings, affecting premises 25 Pine street, Borough of Manhattan; and

WHEREAS, the order of the superintendent of buildings, dated October 22, 1924, reads:

"You are hereby directed to enclose the interior stairs

MINUTES

from the cellar to the roof by fireproof partitions with fireproof self-closing doors on all openings.”;

WHEREAS, the building is non-fireproof, ten stories in height, 24 ft. 2 in. by 82 ft. in area at the 1st story and 24 ft. 2 in. by 74 ft. 7 in. in area above; OCCUPIED as office building, averaging 15 persons per story; EQUIPPED with a standpipe system; and

WHEREAS, appellant proposes to separate the entire elevator shaft from the stairway by means of wire glass in iron frame work; and contends that there is no boiler room in this building, thereby reducing the possibility of fire to a minimum; that any fire could be taken care of by the standpipe system, and contends, further, that it would be exceedingly difficult from a mechanical standpoint to enclose the stairway.

Resolved, that the order of the superintendent of buildings be and it hereby is modified, and the appeal be and it hereby is granted on condition that the elevator shaft throughout its entire height shall be enclosed with wire glass in metal frame, no light therein to exceed an area of 720 sq. in.; that the enclosure otherwise shall comply with the elevator rules of the board of standards and appeals; and that there shall be no manufacturing use or occupancy in any part or portion of building.

397-25-A.

APPELLANT—Charles E. Robertson, owner.

SUBJECT—Appeal from orders of fire commissioner.

PREMISES AFFECTED—Foot of Hubbard street, Marine Basin, Brooklyn.

APPEARANCES—

For Appellant: Walter C. Goodwin.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Appeal granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Commissioners Connell, Flanagan, Guilfoyle and Fire

Chief Kenlon 5

Negative 0

Absent 0

THE RESOLUTION:

(397-25-A)

WHEREAS, Charles E. Robertson, owner, filed, April 11, 1925, an appeal, from orders of the fire commissioner, affecting premises at the foot of Hubbard street, Brooklyn, and

WHEREAS, the orders of the fire commissioner read:

“1. Install a standpipe system 4 inches in diameter.

“2. Provide telegraphic communication with Department Headquarters as provided for by City Ordinances, Sec. 20, Ch. 12, Code of Ordinances.”;

and

WHEREAS, the premises consist of a plot of ground at the foot of Hubbard street, Brooklyn, consisting of four (4) buildings and a three-pier yacht basin, the plant of the Marine Basin Co., Inc., the premises being approximately 276 ft. by 1,713 ft. in area; and

WHEREAS, appellant contends that no combustible materials are stored on the premises; that there is a 2 in. standpipe system, connected with the city mains, running to the end of each of the three piers; that there is a watchman's time clock system in operation; that there is a regulation fire alarm box within 30 ft. of the main office of the plant, and appellant proposes to install (if deemed necessary by the board) a 50 gallon per minute transportable fire pump to supplement the fire appliances and devices now maintained.

Resolved, that the orders of the fire commissioner be and they hereby are modified, and the appeal be and it hereby is granted, omitting standpipe, on condition that combination watchman and central office box system shall be installed throughout premises, taking in each building and

on each pier; and that stations shall be located not more than 400 ft. distant from each other in a direct line of travel.

520-25-A.

APPELLANT—Baker Steam Products, Inc., for Mrs. Karl Bitter, owner.

SUBJECT—Appeal from order of fire commissioner.

PREMISES AFFECTED—East side of Tibbett avenue, 273 feet south of West 246th street, The Bronx.

APPEARANCES—

For Appellant: George C. LeBlanc.

For Administration: Inspector Lynch of fire department.

ACTION OF BOARD—Appeal granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Commissioners Connell, Flanagan, Guilfoyle and Fire

Chief Kenlon 5

Negative 0
